In a letter to DOE Secretary Bodman, Chairman Waxman asks for clarification of inconsistent statements the Department has made about the cleanup of the Santa Susana Field Laboratory and the Energy Technology and Engineering Center. DOE's actions and track record suggest the Department may not intend to conduct a court-ordered Environmental Impact Statement before continuing its cleanup activities at the site. Chairman Waxman asks DOE to detail its plan, commit to complying with the court order, and honor its commitment to fund an EPA radiological survey of the site. **Documents and Links**
