A 2008 comprehensive report on contractor safety prequalification, *Contractor Safety Prequalification*,⁸⁶ (Phillips and Waitzman, 2008) refers to a 1991 John Gray Institute report, *Managing Workplace Safety and Health: the Case of Contract Labor in the U.S. Petrochemical Industry*,⁸⁷ as a *blueprint* for subsequent industry interventions addressing contractor safety, including the issue of contractor safety

⁸⁴ This information is not completely accurate. OSHA's *2006 Log of Work-Related Injuries and Illnesses for 2006*,⁸⁴ the year that RPI experienced an EMR of 1.28, listed no injuries or illnesses that occurred in the area of the Golden Gate Bridge or the Bay Bridge in California. Robison-Prezioso, Inc. was cited by OSHA for a fatality incident on a Bay Bridge on January 4, 2002, and another fatality incident on the Bay Bridge on September 25, 2001, where a motorist was killed. Both of these cases are still listed as *open* on the OSHA website. The reference to the *Golden Gate Bridge* and RPI's high EMR rate was made by the Colorado Safety Supervisor in the Safety Addendum to the penstock contract signed by both parties.

⁸⁵ The Business Roundtable represents the CEOs of some of the largest corporations in the U.S. The association develops policy and advocates positions on diverse issues such as workforce development, sustainable growth, and corporate leadership. CURT is an independent offshoot of the Construction Committee of the Business Roundtable and represents the viewpoints of member construction owners seeking to improve construction industry practices including safety performance [CURT, 1990].

prequalification.⁸⁶ The report found an association between rigorous screening in the selection of contractors and positive safety performance (Phillips and Waitzman, 2008, pp.49-50).⁸⁷

8.1.4 Contractor Selection and Safety: Current Industry Guidelines

Recent studies note a modern trend of alternative procurement methodologies that use factors other than low price to select construction contractors, such as quality, past performance, and safety⁸⁸ (TRB, 2006, pp.40). Several organizations and industry associations, including the Construction Users Roundtable (CURT),⁸⁹ the American National Standards Institute (ANSI), the American Industrial Hygiene Association (AIHA), and FM Global, have developed guidelines and recommended practices addressing the use of safety criteria for selecting contractors. One common method is prequalification, typically a pass/fail system that ensures that only contractors who meet specific requirements, including safety, are allowed to compete (CURT, 2004, pp. 1, 5). Another common alternative construction procurement

⁸⁶ While the John Gray Institute report addresses contractor safety issues in the petrochemical industry, recent reports note the applicability of the conclusions from the 1991 report to general industry construction safety (Phillips and Waitzman, 2008, pp.49-50). A case study examining the protection of contract workers at the Department of Energy's facilities found the John Gray Institute report to be the "most comprehensive study of safety related to contract labor" (Gochfeld and Mohr, 2007, pp.1607-1613).

⁸⁷ In 1989, an explosion and fire at the Phillips Chemical Complex in Pasadena, Texas, killed 23 and injured 232 workers. In the wake of the Phillips' incident, OSHA released a report to the President of the United States that identified multiple safety system failures that led to the incident including contractor safety issues (1990, pp.25-26). As a result, OSHA commissioned a major study to examine the health and safety issues related to the use of contractors in the U.S. petrochemical industry. OSHA specifically directed that the study examine the "the role of safety and health in the selection of contractors" (1990, p.64). Consequently, the John Gray Institute report used industry national surveys and case studies to understand the extent to which safety performance was considered in the selection of contractors (2006, pp.85-91). Partly in response to the John Gray report, OSHA's contractor safety requirements in the Process Safety Management Standard, C.F.R. 1910.119, include a requirement that employers when selecting a contractor "shall obtain and evaluate information regarding the contract employer's safety performance and programs," 1910.119(h)(2)(ii).

⁸⁸ The TRB (Transportation Research Board) report addresses highway procurement; however, the discussion of procurement methodologies more generally references industry or public sector procurement trends.

⁸⁹ CURT is an industry organization that promotes advocacy by users of construction services on national issues that includes "developing industry standards and owner expectations with respect to safety, training and worker qualifications" http://www.curt.org/2_0_about_curt.html, accessed 10/27/09. CURT is composed of 66 member companies, organizations, and government entities that represent some of the largest industrial corporations and users of construction services in the U.S. including DuPont, ExxonMobil, Dow Chemical, Intel, Proctor & Gamble, Duke Energy, General Motors, Shell, the U.S. General Services Administrations, and the U.S. Army Corp of Engineers.

method is referred to as “best value” contracting where, in addition to price, other key factors such as safety can be considered in evaluating the bid package—this method typically involves a rating system where bidders are scored and the highest evaluated bidder is selected (TRB, 2006, pp. S-2 – S-8). A third common procurement method combines prequalification and best value practices: only prequalified bidders are allowed to compete in the final selection process and the evaluation and rating of the bidders is based on best value parameters (CURT, 2005, pp.6-9; TRB, 2006, p.1). Xcel used both prequalification and best value components in its selection of the Cabin Creek penstock recoating contractor.

Industry guidelines addressing contractor selection support using a prequalification process that includes safety criteria. CURT has developed user practices addressing safety and contractor selection that are intended to educate CURT members and industry. The CURT User Practice, —Construction Safety: The Owner’s Role,” states that —[c]ontractors must be prequalified by the owner to participate in the final contractor selection process. Demonstrated safety performance is a critical criterion used in the prequalification process” (CURT, 2004b, p.6). CURT guidance lists a variety of typical criteria for safety prequalification: staff qualifications, accident history, EMR, a contractor’s safety program, and an owner’s previous experience.⁹⁰ Safety guidelines published by the AIHA, —Health and Safety Requirements in Construction Contract Documents” identify a number of specific prequalification criteria including EMR, OSHA injury and illness logs, OSHA citations, and training certifications. ANSI Standard Z-10, —Occupational Health and Safety Management Systems” also recommends that the

⁹⁰ The CSB noted in its BP Texas City investigation report (2007) that particular attention must be given by companies in developing effective safety performance metrics, which should include leading and lagging indicators (pp.184-185). Additionally, performance metrics that are commonly utilized may be inappropriate in some circumstances. For example, one contractor safety standard noted that the use of EMRs may not always be effective (API Standard 2220, 2005a, p.13).

contractor prequalification process include consideration of safety criteria for successful contractor safety performance management⁹¹ (ANSI/AIHA Z-10, 2005, p.20).

8.1.5 Xcel Corporate Policies on Contractor Selection

Xcel had corporate policies in place prior to the incident that addressed contractor safety and the role of safety in selecting contractors. However, while these policies allowed a prequalification process to be used, and a rating and ranking RFP competitive bid process that awarded the contract to the “lowest evaluated bidder,” using a prequalification process was not mandatory and the minimum specified requirements were left to the procurement representative. Thus, the use of safety criteria in the prequalification process was not required, nor was it considered in the prequalification step at the Cabin Creek project.

In addition to the score of zero that RPI received, the Xcel evaluation team was also aware of RPI’s accident history that involved fatalities. Had Xcel examined RPI’s OSHA inspection database and other sources publically available, they would have discovered a lengthy history of serious OSHA citations, including a number of violations specifically involving the unsafe handling of flammable liquids (Appendix B). Although the terms of the RFP relied on contractors to self-report accident histories, RPI did not provide Xcel with records related to several other serious relevant regulatory actions.^{92, 93}

⁹¹ API Recommended Practice (RP) 2221, “Contractor and Owner Safety Program Implementation” also recommends contractor prequalification using a variety of safety criteria. The recommended practice states that “[t]he selection of a qualified contractor is the first step toward obtaining safe contractor performance” (API RP 2221, 2005b). API’s RP 2221 provides a comprehensive prequalification form that includes 48 questions and data requests. While the API publication addresses refining and petrochemical industry facility owners, it is persuasive guidance for general industry to improve contractor safety performance, particularly in performing hazardous repair, maintenance, and construction as in the Xcel penstock recoating project.

⁹² In 2006 RPI agreed to pay a penalty of \$145,000 to a division of the California Environmental Protection Agency to settle violations that included illegally disposing of hazardous waste and making false statements to government officials.

⁹³ Xcel’s “Contractor Safety, Health and Environmental Questionnaire,” attached to the Cabin Creek penstock recoating RFP, required submission of any citations received from a regulatory agency during the past three years. RPI did not disclose to OSHA a 2005 serious OSHA violation in Arizona that occurred within the 3-year time period.

Moreover, Xcel's policies addressing contractor selection do not require that the records be verified and, in fact, Xcel confirmed to the CSB that it had not verified RPI's submissions or researched its background.

Xcel's "Contractor Safety" corporate policy provided for a health and safety evaluation of the contractor bids and recommended a review of the contractor's EMR. The policy stated that an EMR above 1 "would normally be considered unacceptable for the construction industry," but did not explicitly require a rejection of a bid proposal based upon the EMR. Xcel's policies allowed a contractor with "unacceptable" safety performance to further compete in the contractor selection process. CURT guidance on contractor selection prequalification illustrates an approach that more effectively ensures safety:

Any contractors that do not meet base criteria fail and are not included on the potential list. An example of this type of pass/fail criteria might be: only contractors with an Experience Modification Rate less than 1.0 are acceptable (CURT, 2004a, p.5).

A prequalification policy consistent with industry guidelines would have disqualified RPI and prevented the firm from being considered in the final selection process.

8.2 Contractor Oversight

Xcel did not provide sufficient oversight to ensure that safe practices were upheld during the hazardous recoating work within the penstock.

8.2.1 Safety Addendum Added to Contract

In response to negative information about RPI's safety record, the Xcel safety supervisor proposed additional safety requirements for the penstock project. The agreement between Xcel and RPI included a safety addendum that required a number of additional safety measures. It reads as follows:

1. RPI will be extra diligent toward safety, ensuring [that] they are carefully following their safety policies and procedures.⁹⁴
2. RPI will respond to safety questions and concerns from Xcel Supply in a timely manner.
3. Xcel Supply will observe closely the work and report any concerns immediately to RPI's on site supervision (daily by on site personnel and randomly by Energy Safety).
4. Xcel Supply will provide our Stop Work Policy to RPI and that all understand that any Xcel Supply employee can stop a job. This is routine and covered in our contractor orientation at the start of all jobs.

Xcel concluded that if it kept a "close watch" on RPI, the penstock recoating project would be safe and successful.

8.2.2 Xcel Cabin Creek Site Contractor Oversight Activities and RPI Safety Performance

Xcel did not increase its oversight of RPI nor did it implement corrective actions even though, during the penstock recoating project site activities prior to the incident, Xcel managers had identified serious safety hazards associated with the work and were aware of several significant safety problems attributable to RPI:

- An RPI worker slipped and fell inside the penstock due to the wet, slippery interior surface conditions. The worker suffered a dislocated shoulder and was treated at the hospital.
- The penstock was evacuated on several occasions prior to the incident due to high readings of CO, a toxic gas.

⁹⁴ RPI provided its entire "Injury and Illness Prevention Program" safety manual to Xcel as part of its bid package submission; therefore, Xcel was aware of RPI's safety policies and procedures and could ensure that they were followed.

- Electrical problems that destroyed of penstock lighting, electrical junction boxes, and other equipment.
- Xcel welded a ~~“weep hole”~~ inside the penstock on the day of the incident without issuing a hot work permit. Xcel’s entry into the confined space lacked a confined space permit; that welding fumes could create a potential hazardous atmosphere was not analyzed.
- The Xcel penstock project manager identified serious hazards in the penstock work, stating in an email that ~~“workconditions~~ inside the penstock are highly hazardous on many levels.”

Despite Xcel’s knowledge of these serious safety problems, Xcel managers conducted safety observations of RPI’s penstock activities on only two documented occasions: September 20, 2007 and October 1, 2007. The project manger completed an inspection checklist, noting the ~~“xtremely slick surfaces”~~ inside the penstock. The penstock inspection form also stated ~~“environment continuously monitored,”~~ but employee interviews and documentation indicate that the penstock was only periodically monitored at the access door entrance for hazardous atmospheres.⁹⁵ An Xcel safety representative visited the penstock for a safety observation the day before the incident, during sandblasting operations. The completed safety observation form listed a number of worker protection categories that were marked off as satisfactory, unsatisfactory, or not applicable. The safety representative had marked the worker protection category of ~~“onfined space entry permit”~~ as ~~“satisfactory.”~~ The comments section noted that an RPI worker was at the penstock entrance accounting for the personnel inside. However, as discussed, RPI and Xcel had not effectively implemented important elements of a permit-required confined space program. For example, the confined space permits were only partially completed and RPI had not established acceptable entry

⁹⁵ A few witnesses stated that the RPI supervisor also occasionally monitored the air farther inside the penstock, but not on the day of the accident. There is, however, no documentation of these readings.

conditions for the penstock. The form the project manager completed during the September 20 safety inspection similarly checked “OK” under the category of confined space safety practices.

8.2.3 Xcel Corporate Policies and Other Requirements Addressing Contractor Oversight

While Xcel’s corporate policies and contracting documentation place primary responsibility for safety on the contractor for work under its control, Xcel policies also contain specific contractor safety oversight requirements. In the wake of the Cabin Creek incident, Xcel spokespersons stated that safety was RPI’s responsibility and the contractors are “experts in the field and that’s why we hired them” (Lipsher, Mitchell, and McPhee, 2007). However, Xcel’s “Construction and Contractor Management” policy states: “[c]ontractor oversight or project control shall be established by both parties for all contracts with regard to health and safety standards.” Xcel’s “Contractor Safety” policy provides several contractor oversight requirements including the establishment of effective daily communication addressing safety issues between Xcel and the contractor, periodic jobsite visits by Xcel personnel to verify safety performance, and prompt notification and correction of deficiencies where violations of health and safety standards or regulations are discovered. Xcel’s corporate policy is consistent with industry safety guidelines for owner oversight of contractor safety. CURT user practices recognize that “[t]he owner must monitor contractor behavior to ensure effective implementation,” which includes auditing, measuring, and analyzing safety results, participating in incident investigation, and participating in contractor safety training (CURT, 2004b, pp.7-9).

However, Xcel ineffectively implemented its program for contractor safety oversight in a number of key areas identified by its contractor safety policy:

- Xcel and RPI managers did not establish effective daily communication concerning the hazards associated with the penstock recoating project. Xcel did not effectively plan and coordinate with RPI to identify and control serious hazards in the recoating project, including the use of a flammable solvent within the penstock confined space.

- The Xcel project manager or safety staff made documented safety observations only on two occasions at the penstock; these safety observations were ineffectively performed and failed to identify the serious confined space hazards.
- Violations of Xcel safety standards and OSHA regulations were not promptly communicated and corrected. The serious safety issues that were known to Xcel during the penstock work did not lead to increased scrutiny of RPI or effective corrective action.

Xcel acknowledged to the CSB that it had not audited the performance of its corporate contractor selection and safety oversight program prior to the incident. Periodic corporate audits play an important role in ensuring that safety policies and procedures are applied and effectively implemented so that safety hazards can be controlled or eliminated (ANSI/AIHA Z-10, 2005, p.25).

Xcel did not follow an effective contractor selection methodology that would ensure that contractors with a known unacceptable safety record would be disqualified from the bidding process. The company also failed to provide sufficient oversight to ensure that its contractors maintained a safe work environment while performing hazardous maintenance work at its Cabin Creek site.

9.0 EMPLOYEE SAFETY TRAINING

Employee safety training is integral to the success of a company's safety and health program. First and foremost, the company is responsible for ensuring that its employees are trained and capable of conducting work safely.⁹⁶

Three broad types of training were available to RPI employees: 1) company-specific training provided by RPI; 2) general continuing education training provided through a union and the company partnership committee's Training Center; and 3) work-site specific training provided by RPI and Xcel. However, all of these modes of training were deficient in providing appropriate safety information to the penstock work crew, either by the administration of the training or the content of the material.

Specifically, the RPI employees were ill-prepared to safely conduct work inside the penstock because

- RPI did not provide adequate training to its employees on its safety policies and procedures
- RPI relied primarily on the partnership committee's Training Center to provide training to its employees, but the Training Center is not responsible for providing company- or site-specific training to its members;
- Only individuals hired as an apprentice or those specifically referred to the Training Center for enrollment in the apprenticeship program's semester-long courses receive the comprehensive and in-depth safety training the Training Center provides; consequently, just

⁹⁶ The American National Standard, "Occupational Health and Safety Management Systems (OHSMS), ANSI/AIHA Z10-2005," provides good practice guidance on training and competency. It states that the employer will "establish processes to ensure through appropriate education, training or other methods that employees and contractors are aware of applicable OHSMS requirements and are competent to carry out their responsibilities as defined in the OHSMS" (ANSI/AIHA, 2005).

two of the 14 contractors⁹⁷ on the penstock project who had gone through portions of the program received some of this in-depth training.

- Employees referred to the Training Center for evaluation are assessed only on their technical painting skills, not their safety knowledge.⁹⁸ And because the two RPI employees referred by RPI to the Training Center had skill levels at or above a mid-level apprentice, they were not required to take the basic painting level courses that included much of the in-depth safety training.
- Only nine of the 14 RPI employees received onsite training at Cabin Creek prior to the start of the recoating project, and that training was both abbreviated and did not effectively address the hazards inherent to the penstock recoating work.

As a result, the RPI work crew received inadequate training on the specific and unique hazards of the penstock, including the safe handling of flammables, proper and safe use of spray equipment in a confined space, fire prevention and mitigation, and emergency response and rescue awareness. Had the existing apprenticeship safety training been provided to all journeyman painters, the RPI work crew would likely have been better prepared to manage the unique hazards of the penstock.

9.1 Company-Specific Safety Training

Employers are responsible for providing appropriate and effective safety training to its employees. RPI's IIPP manual describes safe work practices and procedures on a wide array of safety issues, and while many are deficient (Section 6.6), a number address specific hazards that were associated with the penstock project, including the safe handling of flammables, proper confined space entry, and fire

⁹⁷ RPI had 14 employees working at the Cabin Creek site for the penstock recoating project; however, one left prior to the day of the incident for personal reasons. Twelve contractors and a general foreman remained on site.

⁹⁸ The only safety issue individuals are evaluated on is their knowledge of proper PPE

prevention. Training on the safety information within the IIPP manual likely would have mitigated some of the risks inherent with the recoating work.

Unfortunately, the company's method to ensure that newly hired individuals understood the IIPP information was simply to have them sign off on a Certificate of Compliance, which states that the employee received the *IIPP Manual* and the *Employee Safety Handbook* and agrees to comply with the rules and practices of these documents. At the time of the incident, RPI did not test or otherwise verify comprehension of the IIPP and its contents on an ongoing basis throughout an employee's career with the company. In fact, a 2006 audit of RPI by the SSPC found that RPI had ~~no~~ documentation of craft-worker assessment." In response to this finding, RPI stated that it was ~~currently~~ implementing a training and documentation plan that will meet the requirements..." outlined in the audit. RPI went on to state that ~~our~~ training[,] which will now be more stringently documented, will consist of; [sic] Ongoing Safety Training, Specialized Material Application Training, New Equipment Training, Site Specific Training...etc...)." Available evidence indicates that this training did not occur.

9.2 Training Center Safety Training

A Master Labor Agreement between the Painters and Allied Trades Union, District Council 36, and several participating multi-employer associations created the Southern California Painting and Drywall Industries (SCPDI) Joint Apprenticeship Training Committee and Center.⁹⁹ The SCPDI Training Center is charged with providing an apprenticeship training program for beginners in the industrial painting trade. Integrated within this apprenticeship training program are a number of critical safety components. Those who fully complete the program have the opportunity to build a solid foundation of technical painting skill and safety awareness.

⁹⁹ This Committee, and its Training Center, is maintained through a Master Labor Agreement between the Painters and Allied Trades Union (District Council 36) and several contractor associations, of which RPI is a member.

However, the number of individuals who benefit from the apprenticeship program training courses is limited, in that the SCPDI Training Center is responsible for providing in-depth safety training only to individuals who are either just entering the industrial/commercial painting field or those referred to the Training Center by their employer for a skills evaluation and are subsequently found to be lacking in painting skills and abilities. None of the 14 RPI employees working on the penstock project were graduates of the apprenticeship program; only two were referred to the Training Center by RPI for skills evaluation. And because the two RPI employees referred to the Training Center had skill levels at or above a mid-level apprentice, they were not required to take the basic painting level courses that included much of the in-depth safety training.

Additionally, those referred to the Training Center are evaluated solely on technical painting skill and expertise; safety knowledge is not assessed as part of the evaluation process. An individual could qualify at the fourth stage within the seven-stage Apprenticeship Program based on his/her demonstrated knowledge of proper painting techniques and abilities, without having to demonstrate that he/she has the *safety* knowledge necessary to perform work at that painting skills level within the program. Indeed, the evaluation procedure utilized by the Training Center does not include an assessment of safety knowledge. Individuals that enter midway into the Apprenticeship Program miss out on multiple opportunities for in-depth safety training, and those hired by the company and deemed sufficiently skilled in the trade are not sent to attend the semester-long Apprenticeship courses, and consequently are not exposed to the in-depth safety training.

These training gaps are compounded because the Training Center does not, and is not expected or required to, provide instruction on company-specific policies or site-specific hazards.

The SCPDI Training Center does offer general OSHA-required continuing education training opportunities¹⁰⁰ to its union members; however, this training is not worksite-specific.

9.3 Generic Onsite Training Provided at Cabin Creek

The RPI work crew did not receive comprehensive safety training specifically pertaining to the penstock work environment from either their employer (RPI) or the host company (Xcel).

An Xcel safety supervisor, after reviewing RPI's penstock project bid submittal, noted that a number of the RPI employees lacked several training courses pertinent to the penstock work, including confined space entry and electrical safety. He communicated this lapse in training to the RPI safety manager, who asserted that all RPI employees involved in the project would receive onsite training to cover these and other safety topics prior to starting work. The RPI safety manager asked a trainer at the SCPDI Training Center to come to the Cabin Creek site to provide basic OSHA-required continuing education/refresher training to the work crew.

Only nine of the 14 RPI employees on the penstock project received this onsite training on September 10, 2007. This training consisted of 6 hours of refresher-level safety review on six topics (each lasting about an hour). The contractors watched a safety video on each topic and were tested through multiple-choice exams. Those who had not arrived onsite until after September 10 were not provided an opportunity to take a make-up session.

In testimony to the CSB, the trainer stated that the review of safety topics was kept “petty brief” because the contractors had attended the refresher courses multiple times. While repetition may seem burdensome, the real challenge in preparing for safe work is to ask: What about this job and these planned activities are

¹⁰⁰ CPR, Respirator Use and Fit Test, and Lead Worker Refresher is required annually; First Aid is required every three years; and the following courses are reviewed at least once per year in the Apprenticeship program but journeymen are required to take the training only once: Fall Protection, Scaffold/Swing Stage, Confined Space Awareness, Hazard Communication, Hearing Protection, Asbestos Awareness, Aerial Mobile Power Lifts, Forklift & Drywall.

different from what we've done before? What are the hazards of those different activities? How can that risk be eliminated or controlled?¹⁰¹ Approaching hazards this way focuses attention on the risks that may not be readily apparent when reviewing generic training materials before the start of work.

The onsite training for the RPI employees was brief and generic and included only a basic review of confined space awareness. It included an overview of the definition of a confined space, but not how to evaluate a confined space for potential hazards, how to properly complete confined space entry forms, or how to prepare and arrange methods for evacuation. The onsite training also included a basic review of electrical safety, the material provided focused on the importance of using grounded equipment and following lockout/tagout procedures, but not on the need to use conductive hoses to prevent static discharge, nor did it explicitly instruct the crew about how to wire and ground equipment properly for safe use.

The hazardous communication training on September 10 did not include a site-specific discussion of safe use of flammable solvents in confined spaces, despite plans by both companies to use a solvent within the penstock during the recoating process¹⁰² (Section 6.5). Nor were flammable and explosive atmospheres, fire prevention, and fire extinguisher use within the penstock incorporated in any onsite training for the contractors; also excluded was a discussion of procedures for emergency evacuation of the penstock. Neither Xcel nor RPI discussed the lack of a secondary egress with the work crew during the onsite training, and specific emergency response and rescue training did not extend beyond the instruction to the crew to call the Xcel control room for 9-1-1 services if an emergency should arise.¹⁰³

¹⁰¹ A U.S. aircraft commander, who is also a human performance specialist, often prepares his crews by asking, "What is dumb, different, and dangerous about this specific mission?" to provoke their collective thinking about the specific and potentially unique risks of a given mission.

¹⁰² The hazardous communication training on September 10 consisted of an employee's right to know the chemicals onsite, how to read an MSDS, and proper PPE.

¹⁰³ One likely reason for the lack of pertinent training on the issues inherent with the penstock project work was the trainer's lack of penstock experience. The trainer relied on a more experienced contractor within the RPI crew to

The RPI employees also received a brief onsite safety overview from Xcel as they arrived at Cabin Creek and began preparing for work inside the penstock.¹⁰⁴ This brief orientation – consisting of a checklist review of potential hazards – was held on three separate occasions, led by different Xcel personnel and attended by various crew members.¹⁰⁵ The orientation provider addressed confined space by asking the RPI crew if they had been trained on the safety topic, but the provider did not verify this training, nor were MSDSs of chemicals to be used within the penstock discussed or requested. The orientation did not cover a number of safety issues related to the penstock work, including emergency response and evacuation plans or safeguards for minimizing fire hazards within the confined space.

9.4 Safety Training Needs Specific to the Penstock

The unique characteristics of the penstock and the recoating work require knowledge and skill on a number of safety topics, including the safe handling and use of flammables, confined space entry and monitoring, fire prevention, and emergency preparedness. Many of these safety topics are covered effectively in the SCPDI apprenticeship program; others are covered within the safety policies of the host and contractor companies. Through interview testimony and training records, the CSB found that the necessary safety information pertaining to the penstock project was not, in most cases, effectively administered to the RPI workforce, nor did either company uphold and reinforce safe work practices at the work site. This section identifies where safety training and information existed but was not incorporated into the work activities at Cabin Creek.

inform the others of the penstock's hazards; however, according to witness testimony, the experienced contractor focused on slip, trip and fall hazards, not on the major confined space hazards of the penstock or the risks of working in flammable atmospheres.

¹⁰⁴ This orientation was meant to focus on Xcel policies and procedures; topics covered included lockout/tagout, forklift use, slipping hazards, and waste removal from the site.

¹⁰⁵ Each member attended the orientation once.

9.4.1 Substituting Non-flammables for Flammable Solvents

The use of potentially safer alternatives to MEK is discussed in the SCPDI apprenticeship program's training course, —Solvent and Hazardous Materials.” The training materials state: “Whenever possible, organic solvents should be replaced with either water-based solvents or another less harmful organic solvent.” The importance of exploring opportunities to exchange flammable solvents for non-flammable substitutes is reiterated throughout the training materials, which provide a substitution example dealing explicitly with MEK: —Citrus based [sic] cleaner could be used in place of MEK for tool clean up.” Only one RPI crew member attended the —Solvent and Hazardous Materials” course (as part of his training through the Apprenticeship program). The use of a non-flammable solvent would have prevented the Cabin Creek fire.

9.4.2 Safe Handling and Use of Flammables

Training on the safe handling and use of flammables is offered only to employees who are going through the apprenticeship program or when specifically requested by a company. The IIPP safety policies concerning the safe handling and use of flammables were not provided to employees through in-house company-provided training, nor were employees' comprehension of these policies assessed.¹⁰⁶ As a result, RPI employees were not sufficiently trained on the safe use of flammables.

The proper and safe handling of flammables is covered in the —Basics of Solvents and Thinners” and —Solvent and Hazardous Materials” training courses the SCPDI Training Center offers. However, records going back five years prior to the incident show that none of the RPI employees working inside the penstock took the —Basics of Solvents and Thinners” course and, as stated, only one of the crew took the —Solvent and Hazardous Materials” training course.

¹⁰⁶ When subpoenaed for all training materials, RPI did not provide any documentation that employees were tested on the IIPP safety information.

The “~~Bas~~ics of Solvents and Thinners” course materials provide many warnings about the risks of using flammables, and the “~~Sol~~ents and Hazardous Materials” course goes further, stating: “~~N~~EVER leave solvent products open when not in use” (emphasis in original) and “~~P~~lace solvent soaked rags or materials in all-metal containers with tight sealing tops” to prevent dangerous vapor accumulation in the work area. The training materials also warn: “~~T~~ransport and store solvents ONLY in approved, properly labeled and marked containers” (emphasis in original). By following these safety rules, the training material asserts, the chance for a fire or explosion is reduced.

Some RPI employees stated they knew how to safely transfer flammables, but as metal safety cans for MEK transfer were not made available for use at Cabin Creek, adhering to this safety policy was impossible.

9.4.3 Flammable Atmospheres and Confined Space Entry

SCPDI Training Center training materials for “~~C~~onfined Space Entry” state: “~~I~~f the atmosphere contains flammable gas, vapor or mist in excess of 10 percent of its lower flammable limit (LFL), that atmosphere is not acceptable for entry.” Yet on October 2, 2007, the Cabin Creek confined space work did not prohibit entry or occupancy of the penstock where the LFL was in excess of 10 percent, nor did Xcel or RPI’s policies require this safeguard. The attendant was conducting atmospheric monitoring at the access door, more than 1,450 feet (442 meters) away from the crew using the solvent to flush the hoses, wands, and sprayer system with MEK, which was too far away to get an accurate measurement. MEK vapor produced with the flushing activities resulted in the accumulation of solvent vapors to levels above the maximum allowable for entry around the equipment and work crew.

9.4.4 Fire Prevention and Mitigation

Both the SCPDI fire prevention training course material and RPI’s IIPP section, “~~F~~ire Protection and Prevention,” stress the importance of both clear access to emergency response equipment and its placement close to the actual painting operation. Yet RPI provided only six of the 14 contractors with a

general course on proper fire extinguisher placement within the worksite; this training occurred approximately two months prior to the incident.

The SCPDI fire prevention training also included instructions that there should be more than one exit in the area of work and that all workers keep their backs to an exit in case a fire necessitated escape. Despite these fire safety recommendations, the arrangement of spray equipment within the narrow confines of the penstock kept contractors separated from the work area's only exit. No remedial action was taken to address the lack of a secondary exit, although a number of RPI employees expressed concern about having only one egress point. The positive affects of training are significantly diminished when the good practices promoted in the training cannot be adhered to. Interestingly, a penstock project contract addendum, which both Xcel and RPI agreed to, empowered Xcel employees with "stop work authority" during the project, allowing Xcel employees to order RPI to cease work within the penstock if they observed unsafe work practices. This stop work authority was given specifically to Xcel employees, not the RPI work crew.

9.4.5 Proper and Safe Use of the Sprayer and Associated Equipment

RPI employees were not trained on the proper and safe use of the Graco epoxy sprayer system. The SCPDI Training Center does not train on Graco spray equipment exclusively, but a plural component (two-part) spray system is a topic within the apprentice spray painting course curriculum. However, only two of the 14 contractors went through the apprenticeship semester course that covers this information. This training, which was provided by a third party in agreement with RPI, had taken place two years prior to the penstock project. Working with unfamiliar equipment likely contributed to the operational problems the crew was experiencing during their application attempts.

The RPI crew working inside the penstock lacked the in-depth safety training and knowledge necessary to work safely within this unique and challenging confined space environment. RPI did not provide adequate training addressing the safety risks of the penstock recoating work to its employees. The Training Center

Apprenticeship Program does provide comprehensive safety training; however, few RPI employees received this in-depth safety training.

10.0 Regulatory and Industry Standards Analysis

RPI's and Xcel's policies and permits failed to establish safe limits that prohibit entry or occupancy of a confined space with a hazardous flammable atmosphere. However, existing federal regulations for general industry do not require that employers establish such safety limits. Specifically, the current OSHA Permit-Required Confined Spaces Rule does not prohibit entry or occupancy in a confined space above a maximum permissible percentage of the LFL nor does it require continuous monitoring throughout the duration of the work¹⁰⁷ to ensure the concentration of flammable gases does not exceed that percentage.

The CSB determined that, even if combustible gas monitoring had been performed on the day of the incident in the area where flammable solvent was being used, this monitoring would likely not have been enough to prevent the initial flash fire in the penstock; with no set limit for flammable atmospheres, the RPI crew had no evaluation and action level in which to use to determine when it was safe to work and when cessation and/or evacuation was necessary.

10.1 Hazards of Confined Space Work in Potentially Flammable Atmospheres Inadequately Covered in Existing Standards

OSHA's Permit-Required Confined Spaces Rule for general industry states that a confined space must be permit-required when the space has a potential to contain a hazardous atmosphere, which is defined for flammables as an atmosphere that exceeds 10 percent of the LFL [29 CFR 1910.146(b)] (Section 6.1). A permit-required confined space program mandates that employers specify acceptable entry conditions and take actions such as purging or ventilating the space to eliminate or control atmospheric hazards such as a flammable atmosphere [29 CFR 1910.146(d)(3)(i), (iv)]. However, the rule does not define acceptable

¹⁰⁷ In this incident, the penstock space was ~~large~~ or... part of a continuous system," which would require continuous monitoring (See Sections 6.1.3 and 11.2.2.2, which discuss 29 CFR 1910.146 (d)(5)(i)). However, the fact alone that a flammable was being used within a confined space would not have triggered the requirement for continuous monitoring.

entry conditions or specify what additional precautions must be taken for working in a permit-required confined space with a potential flammable atmosphere, nor does it limit entry based upon measureable criteria such as a specific maximum percentage of the LFL, even though OSHA defines an atmosphere as hazardous when it exceeds 10 percent of the LFL. Appendix C of the rule gives examples of permit-required programs, including a scenario where interior coatings/linings are applied in portable tanks. This scenario describes an approach to control the hazards by establishing forced air ventilation to keep the potentially flammable atmosphere below 10 percent of the LFL [29 CFR 1910.146 Appendix C, Example 3]. However, Appendix C provides only examples of permit-required programs; it does not establish enforceable requirements.

In 1996, OSHA issued a letter of interpretation that allows work to be performed in atmospheres in excess of 10 percent of the LFL, stating that when the atmosphere is above 10 percent, “~~all~~ of the requirements of the rule must be met”; however, it provides no specific safety guidance (OSHA, 1996). The letter concludes that because the Permit-Required Confined Spaces Rule for general industry is a performance standard, “~~it~~ does not specify procedures for conditions where the permit-required space has a hazardous flammable atmosphere” (OSHA, 1996). Rather, the employer must implement control measures based upon a hazard analysis of the “~~the~~ means, procedures, and practices necessary for safe permit space entry operations” [29 CFR 1910.146(d)(3)]. In fact, the letter does not suggest any limits on entry based on measurements of the flammable atmosphere or even that safe entry conditions need be defined in terms of the LFL, which directly contradicts the more recent OSHA shipyard standards and recent NFPA guidance, as discussed below.

The Permit-Required Confined Spaces Rule requires “~~purging~~, inerting, flushing or ventilating the permit space as necessary to eliminate or control atmospheric hazards” [29 CFR 1910.146(d)(3)(iv)]. Under the rule, a hazardous atmosphere is one “~~that~~ may expose employees to the risk of death, incapacitation, impairment of ability to self-rescue...injury, or acute illness” [29 CFR 1910.146(b)]. The logic of the provisions would appear to demand that for safe entry, the confined space flammable atmosphere would

need to be reduced to 10 percent or less of the LFL or inerted to prevent the formation of a flammable mixture inside the permit space and the possibility of death or injury; however, the Rule has no such explicit requirement.

The following support the need for effective requirements or limits for working in flammable atmospheres in terms of confined space entry and occupancy:

1. Establishing safe flammable limits as a percentage of the LFL, with the effective use of appropriate monitoring devices (e.g., combustible gas detectors), is an accurate method for obtaining quantitative data to evaluate the potential degree of hazard and protect personnel (McManus, 1999, p.748).
2. Safe flammable atmosphere limits are needed because no adequate PPE is available that can protect workers from an explosion within a confined space (NFPA 1006, 2008).
3. Sources of ignition for a fire or explosion are typically plentiful and difficult to eliminate entirely, as illustrated in the number of possible ignition sources available in the Cabin Creek penstock; as such ~~there~~ is no ready assurance that all sources of ignition could be eliminated” (McManus, 1999, p.746).
4. Lacking specific regulatory requirements based upon measureable parameters, employers may fail to establish adequately protective limits for working in potentially flammable atmospheres. In this incident, neither Xcel nor RPI had established safe entry conditions for flammable atmospheres based upon a percentage of the LFL in their procedures and permits.
5. Failure to establish safe flammable limits undermines the importance of monitoring in permit-required confined spaces; the need for periodic or continuous monitoring will not be understood by employers and personnel if no limits are specified. This safety gap can lead to a failure to conduct critical combustible gas testing in appropriate locations and with the needed frequency, as was the case in the Cabin Creek penstock.

6. Unlike flammable atmospheres, other atmospheric hazards have explicit and measureable requirements elsewhere in the OSHA regulatory scheme to confirm compliance with the Permit-Required Confined Spaces Rule. For example, OSHA standards for toxic substances establish quantitative permissible exposure limits and other standards require quantitative monitoring of potentially oxygen-deficient atmospheres.¹⁰⁸
7. Confined space entry is a frequent activity in U.S. workplaces-OSHA estimates that more than 4.7 million permit-required confined spaces are entered by workers annually (OSHA, September 2008).
8. A flammable atmosphere is a serious confined space hazard. According to noted confined space expert McManus (1999), fires and explosions are a “major cause” of deaths and injuries in confined spaces and have led to a relatively “large portion of fatalities per incident compared to other situations” (p. 112). The CSB concluded that serious confined space incidents involving flammable atmospheres are still a significant problem and that adequate combustible gas monitoring, clearly defined limits for working safely in potentially flammable atmospheres, and other control measures such as eliminating the hazard or adequate ventilation of the space can prevent these accidents (Section 11.0).

10.2 Other Regulations and Safety Guidelines Set Protective LEL Limits for Work in Potentially Flammable Atmospheres

The approach in the Confined Spaces Rule sharply contrasts with more stringent, recently promulgated OSHA standards, such as those for confined spaces in shipyard employment [29 CFR 1915, Subpart B], which limit work activities that can be conducted in atmospheres that exceed 10 percent of the LEL. The shipyard standard requires that confined spaces containing a flammable concentration of 10 percent of the

¹⁰⁸ For example, see OSHA’s Table Z-1, “Limits for Air Contaminants”; 29 CFR 1910.1000; and the Respiratory Protection Standard, 29 CFR 1910.134.

LEL or higher be labeled as “Not Safe for Workers” [29 CFR 1915.12(b)(2)]. In the discussion related to the final rule for confined spaces in shipyard employment, OSHA argued that adopting 10 percent of the LEL limit for safe occupancy was more appropriate than other proposed levels: “The Agency believes that a compartment in which any portion is above 10% of the LEL is unsafe” [59 FR 37816-37863].

Yet the general industry Permit-Required Confined Spaces Rule allows employers to adopt limits higher than 10 percent of the LEL as an acceptable entry condition. McManus, in *Safety and Health in Confined Spaces* (1999), defends the use of lower LEL limits, noting that conducting a confined space hazard analysis can be difficult and uncertain because of several factors: 1) the accurate detection of ignitable atmospheres depends on the position of the intake of the instrument relative to the source, 2) the relative response of the sensor based on substance(s) being sampled to the substance(s) used to calibrate the sampler, and 3) the timing of the samples (pp. 745-752).¹⁰⁹

A number of organizations, standard-setting bodies, and other government regulatory agencies have also adopted guidelines that prohibit or limit work activities in confined spaces in atmospheres above 10 percent of the LEL (Appendix G). McManus (1999) suggests that “the consensus expressed through more recent standards indicates decreased tolerance” for hazardous flammable atmospheres (p. 745). An important example of this trend can be found in the 2008 edition of NFPA 1006, Standard for Technical Rescuer Professional Qualifications. This consensus standard addresses acceptable entry conditions for confined space rescue and states in its explanatory material that “[r]escuers should not enter confined spaces containing atmospheres greater than 10 percent of a material’s LEL, regardless of the personnel protective equipment worn. There is no adequate protection for an explosion within a confined space” [NFPA 1006, 2008, Annex A.7.1.1].

¹⁰⁹ Webber (2007) summarizes relevant research showing conditions where flammable vapors can be ignited even when concentrations are below the LEL that result in localized flash fires.

A number of other confined space consensus safety standards and industry guidelines recommend special precautions to detect and control flammable atmospheres and explicitly establish safe work limits for confined spaces that are substantially below the LFL, such as 10 percent of the LFL [ANSI Z117.1, 2009, p.24; ASTM D4276-02, 2007, p.3; NFPA 326, 2005; API 2015, 2001a, p.28; API 2016, 2001b, pp.43, 60; IChemE, 2005, p.66].

NFPA 326, Standard for the Safeguarding of Tanks and Containers for Entry, Cleaning, or Repair, requires that “all work in or around the tank or container shall be stopped immediately when the flammable vapors in the atmosphere exceed 10% of the lower flammability limit (LFL). The source of the vapors shall be located and eliminated or controlled” [NFPA 326, 2005, p.9]. A number of countries including Australia, New Zealand, and nearly all Canadian provinces prohibit confined space entry above a defined safe flammable atmosphere limit that is substantially below the LEL (Appendix G).

Therefore, in light of the existing consensus of confined space codes and regulations establishing lower LEL limits for safe entry and the improved understanding of the increased hazards of working in permit spaces in atmospheres above 10% of the LEL, the CSB recommends that OSHA limit confined space work activities in the presence of flammables in the same manner and to the same degree as the agency has done in shipyards and as many other consensus standards recommend.

10.3 Colorado Public Utilities Commission

The Colorado Public Utilities Commission (PUC) is a state regulatory agency that oversees a wide variety of electric power and other utilities. Xcel is one of two investor-owned electric utilities operating in Colorado that are regulated by the PUC. The stated mission of the PUC is to serve the public interest —by effectively regulating utilities and facilities so that the people of Colorado receive safe, reliable, and

reasonably priced services consistent with the economic, environmental and social values of our state.”¹¹⁰

The PUC has promulgated the Rules Regulating Electric Utilities (4 Code of Colorado Regulations 723-3, Part 3) that address a range of subjects including safety; construction, maintenance, and operation of electric utility facilities; and competitive bidding processes related to areas such as the acquisition of new utility resources.

The PUC rules require that the construction, maintenance, and operation of a utility be ~~in~~ accordance with accepted engineering practice in the electric industry to assure continuity of service, uniformity in the quality of service, and the safety of persons and property.”¹¹¹ The PUC rules provide that in the event of an incident resulting in death, serious injury, or significant property damage, the regulated utility shall inform the Commission within two hours of learning of the incident and submit a written report within 30 days.¹¹² The only content requirements of the written report are the date, time, place, location, and type of the incident; names of persons involved; and nature and extent of injury and damage. For the Cabin Creek incident Xcel sent a one-page letter to the PUC on November 1, 2007, briefly describing the incident and the number of people killed and injured. PUC rules state that if a utility conducts an internal investigation of an incident that any report developed shall be made available to the Commission upon request.¹¹³ The PUC Commission was not notified of the availability of any internal investigation report by Xcel nor did the Commission receive any report. Xcel did not inform the Commission of the root causes of the Cabin Creek incident, recommendations for prevention, or any subsequent preventative measures taken by Xcel. PUC electric utility contracting rules describe procedural requirements and criteria other than price to consider in the competitive bidding process but the provisions do not include any safety considerations.

¹¹⁰ Mission of the Public Utilities Commission, <http://www.dora.state.co.us/puc/about/AboutMission.htm> accessed 7-13-10.

¹¹¹ Colorado Department of Regulatory Agencies, 4 Code of Colorado Regulations (CCR) 723-3, Part 3, Rules Regulating Electric Utilities, Rule 3200(a), Construction, Installation, Maintenance, and Operation.

¹¹² Id. Section 3204(a) and (b).

¹¹³ Id. Section 3204(c).

The rules contain provisions that regulate resource planning such as those resources that provide electrical capacity and renewable energy. The acquisition of utility resources can include new construction, maintenance, and repairs that significantly impact capacity or prevent service interruption. PUC rules favor competitive bidding for the acquisition of new resources and address requirements for the competitive bidding processes, requests for proposals (RPFs) and bid evaluation criteria. In 2010, the Colorado General Assembly approved renewable energy legislation that requires the Colorado Public utilities Commission to implement new “best value” contracting bid criteria for electric resource acquisition¹¹⁴. The additional criteria that need to be considered in the competitive bidding process include workforce training certifications, long-term career opportunities, and industry standard health care benefits. However, neither the existing PUC rules nor the new mandated criteria require that past safety performance be considered as a factor in the competitive bidding process, nor do they include safety prequalification or disqualification procedures.

¹¹⁴ The 2010 Colorado General Assembly amended Colorado Revised Statutes 40-2-124 by House Bill 10-1001, http://www.dora.state.co.us/PUC/rulemaking/HB10-1001/HB10-1001_enr.pdf, accessed 7-13-10.

11.0 Flammables Used in Confined Spaces: Other Incidents

As part of its investigation of the Xcel penstock case, the CSB collected and compiled confined space incident data from the past 17 years to ascertain the prevalence of confined space flammable incidents and determine if the rate has been impacted by the promulgation of the Permit-Required Confined Spaces Rule. The CSB has determined that the hazard of flammable atmospheres in confined spaces has been a significant workplace safety issue since the promulgation of OSHA's Permit-Required Confined Space Rule on April 15, 1993.

The CSB compiled and researched incident data on 105 previous confined space incidents; of these, 53 were determined to be the result of a flammable atmosphere in a confined space. (Appendix I describes CSB's incident data collection methodology used to obtain this data.) The CSB also found that the number of confined space flammable incidents has increased the past nine years, as a majority of the 53 incidents from 1993 until April 2010 occurred since 2003. These flammable atmosphere confined space incidents include two the CSB investigated in 2009 that resulted in four fatalities (Appendix J).

The 53 identified confined space flammable incidents caused 45 fatalities and 54 injuries from 1993 to April 2010; approximately 57 percent included a fatality. The number of fatalities and injuries increased in the 17 years, with 49 percent of the total fatalities and approximately 57 percent of total injuries occurring since 2003. In the past 14 months, from February 2009 to April 2010, the CSB identified seven additional confined space incidents that resulted in six fatalities and four injuries.

The CSB analysis shows that a flammable atmosphere was present in the confined space prior to entry in 60 percent of the incidents sampled. Flammables were brought into the confined space for activities like painting/recoating, cleaning, or welding in the remaining approximately 40 percent. This data underscores the importance of monitoring the confined space both before entry and continuously in the work area where the confined space work activity includes the use of flammables. Continuous monitoring under these circumstances combined with flammable atmosphere limits established in procedures and permits

are likely to alert workers to the importance of rapid changes that can lead to a flammable atmosphere so that workers can evacuate.¹¹⁵

The data suggest that, even after the promulgation of the Permit-Required Confined Space Rule, a significant number of confined space incidents with fatalities and serious injuries were attributed to flammable atmospheres. Furthermore, the increasing numbers of fatalities and injuries post-promulgation of the Permit-Required Confined Spaces Rule suggests the need for more protective requirements for work in potential flammable atmospheres in confined spaces.

¹¹⁵ An example of how continuous monitoring can prevent worker fatality or injury is evident from a confined space incident that occurred on January 7, 2010 in Amsterdam, NY. Two telephone workers were conducting repair work in a telephone vault (similar to a manhole) when their combustible gas meter alarmed. They were able to evacuate the confined space prior to a small fire breaking out.

12.0 ROOT AND CONTRIBUTING CAUSES

12.1 Root Causes

1. Xcel and RPI management did not ensure effective planning and coordination of the Cabin Creek penstock recoating project to control or eliminate the serious confined space hazards that were present.
 - An effective hazard evaluation of the penstock confined space was not performed; the work required the use of a solvent to clean the epoxy sprayer and associated equipment in the open penstock atmosphere, yet the serious safety hazards of using a flammable solvent inside the confined space were not identified or addressed.
 - Substituting a non-flammable solvent was not considered.
 - Important safety precautions when using a flammable in a confined space, such as continuous monitoring in the work area, providing adequate ventilation, and eliminating or controlling ignition sources, were not implemented.
2. Xcel's and RPI's corporate safety policies and permits did not effectively establish safe limits for flammable atmospheres in permit-required confined spaces that would prohibit entry or occupancy when those limits were exceeded.
3. Early in the planning process, Xcel identified the Cabin Creek penstock's single point of egress in the event of an emergency as a major concern; RPI personnel also raised safety issues about a single exit. However, neither Xcel nor RPI management took remedial action.
 - American Society of Civil Engineering (ASCE) published safety guidance addressing penstock inspections advises on the importance of alternative escape routes in the event of an emergency (ASCE, 1998, p.2-8).

- As a result of the flash fire, five RPI workers, who were located on the side of the sprayer opposite the sole exit, were trapped by the growing flames and eventually succumbed to smoke inhalation.
4. Xcel management did not provide effective oversight of RPI to ensure the penstock recoating work was safely conducted.
- Due to concerns about RPI's record of injuries and fatalities in past projects, Xcel added a "Safety Addendum" to the penstock recoating contract affirming that Xcel would closely observe RPI's safety performance. However, Xcel managers conducted safety observations of RPI on only two documented occasions in the 29 days that RPI personnel were on the job. During the penstock recoating work prior to the incident, Xcel managers were aware of several significant safety problems attributable to RPI, yet Xcel did not increase scrutiny of RPI's safety performance or implement corrective actions.

12.2 Contributing Causes

1. Xcel's corporate policies and practices addressing contractor selection did not adequately ensure contractor safety performance for the penstock recoating project.
- During the contractor selection process, Xcel managers graded RPI safety performance as a zero, the lowest possible score; however, Xcel's contractor selection practices typically provided only for disqualification from the bidding process based upon financial capacity, not safety criteria.
 - The evaluation rating form stated that the score of zero did not meet Xcel's minimum requirements and required automatic rejection; however, RPI was still allowed to compete for the penstock recoating contract. RPI's proposal was ranked as the best overall based primarily on its low price.

- RPI did not disclose to Xcel regulatory violations resolved within the requested three-year period as part of the RFP evaluation process. Xcel's corporate policies addressing contractor selection relied upon self-reporting and did not include specific procedures to verify the contractor's submissions.
2. Xcel and RPI managers did not plan and coordinate the immediate availability of qualified confined space technical rescuers outside the penstock, although the use of flammable solvent in the open atmosphere of the permit space created the need for immediate rescue due to the potential for IDLH conditions.
- Neither company ensured that emergency response organizations or personnel with confined space technical rescue qualifications were immediately available with the necessary fire-fighting equipment outside the penstock.
 - The approximate travel time of the closest identified public emergency response organization with confined space technical rescue qualifications was approximately 1 hour and 15 minutes.
 - After the penstock fire erupted, firefighting and rescue activities likely would have been successfully provided to prevent the fatalities had qualified personnel and equipment been immediately available; the trapped RPI workers were in radio communication with coworkers and emergency responders for 45 minutes after the initial 9-1-1 call.
3. RPI did not ensure that the majority of its workforce at Cabin Creek had received comprehensive formal safety training, effective training on company safety policies, or site-specific instruction addressing confined space safety, the safe handling of flammable liquids, the hazard of static discharge, emergency response and rescue awareness, and fire prevention.

13.0 RECOMMENDATIONS

Occupational Safety and Health Administration (OSHA)

2008-01-I-CO-R1 Amend the OSHA Permit-Required Confined Spaces Rule for general industry (29 CFR 1910.146) to establish a maximum permissible percentage substantially below the lower explosive limit (LEL) for safe entry and occupancy in permit-required confined spaces.

2008-01-I-CO-R2 Publish a –Safety and Health Information Bulletin” addressing the hazards and controls when using flammable materials in confined spaces that includes actionable guidance regarding:

- a. The importance of implementing a hierarchy of controls to address hazards in a confined space that first seeks to eliminate hazards or substitute with a less hazardous material(s) or method(s). Examples include performing work outside of a confined space where reasonably practicable or substituting a flammable material with a non-flammable one.
- b. The necessity of establishing a maximum permissible percentage substantially below the lower explosive limit (LEL) for safe entry and occupancy of permit required confined spaces.
- c. The need to comprehensively control all potential ignition sources and continuously monitor the confined space at appropriate locations and elevations when work activities involve the use of flammable materials or where flammable atmospheres may be created.
- d. The importance of treating confined spaces with the potential for flammable atmospheres above 10 percent of the LEL as a hazard

immediately dangerous to life or health (IDLH) that requires rescuers to be stationed directly outside the permit space and available for immediate rescue with appropriate fire-extinguishing and rescue equipment.

- e. The requirement that confined spaces such as penstocks be managed as permit-required that are so large or part of a continuous system that they cannot be fully characterized from the entry point. Such spaces need to be monitored for hazardous atmospheres both prior to entry and continuously in areas where entrants are working.

The Governor of the State of Colorado

2008-01-I-CO-R3 Implement, through the Division of Fire Safety, an accredited firefighter certification program for technical rescue that encompasses appropriate specialty areas including confined space rescue.

The Colorado Public Utilities Commission

Revise your rules regulating electric utilities, 4 Code of Colorado Regulations 723-3, to:

2008-01-I-CO-R4

- a. Require regulated utilities to investigate the facts, conditions, and circumstances of all incidents resulting in death, serious injury or significant property damage as defined in Section 3204
- b. Require utilities to submit a written investigation report to the Commission within one year of the incident that contains the investigation findings, root causes and recommendations for preventing future incidents that focus on needed changes to utility safety systems. All reports shall be made public.

- c. Authorize the commission to issue orders addressing needed corrective actions to be taken as a result of the incident.
- d. Require utilities to submit periodic reports to the Commission detailing action taken on the incident report recommendations and Commission orders. All reports shall be made the public.

2008-01-I-CO-R5

Require all regulated utilities to fully cooperate with all government safety investigations including facilitating access to witnesses, facilities, and equipment; providing copies of requested records; and responding to interrogatories and other investigative requests for information as expeditiously as possible.

2008-01-I-CO-R6

Require that competitive bidding and contractor selection rules for construction, maintenance or repair of regulated utilities include procedures for prequalifying or disqualifying contractors based on specific safety performance measures and qualifications.

Director of the Division of Fire Safety and the Director the Division of Emergency Management for the State of Colorado

- 2008-01-I-CO-R7** Publish a safety communication that will inform fire service and emergency planning organizations in the state about the confined space safety lessons learned from the Cabin Creek incident including
- a. The need to train and certify emergency response personnel who perform technical, including confined space, rescue.
 - b. The importance of a written confined space rescue plan for each designated permit space that includes

- i. Methods of rescue and determination of whether a rescue team is required to standby outside the space.
 - ii. Rescue equipment requirements and plan of action.
- c. The importance of treating confined spaces with the potential for flammable atmospheres above 10 percent of the LEL as a hazard immediately dangerous to life or health that requires rescuers to be stationed directly outside the permit space and available for immediate rescue with appropriate fire-extinguishing and rescue equipment.
- d. The need for confined space rescue procedures to instruct emergency responders to not enter or occupy a confined space containing a flammable atmosphere 10 percent of the LEL or greater. Personal protective equipment (PPE) will not protect rescuers from an explosion in a confined space.

Xcel Energy, Inc.

- 2008-01-I-CO-R8** Revise your policies for solicitation and procurement of construction services to
- a. Ensure that requests for proposals (RFPs) and selection processes include criteria and procedures for prequalifying or disqualifying contractors based on specific safety performance measures and qualifications.
 - b. Implement written verification procedures for the safety information and documentation submitted by contractors during the bidding and selection process.
- 2008-01-I-CO-R9** Revise your contractor safety policies to require a comprehensive review and evaluation of contractor safety policies and procedures such as the permit-required confined space program and safety performance of contractors working

in confined spaces to ensure that any bidding contractor meets or exceeds Xcel Energy safety requirements.

2008-01-I-CO-R10 Conduct periodic safety audits of contractor selection and oversight at your power-generating facilities to ensure adherence to corporate contractor procurement and safety policies.

2008-01-I-CO-R11 Report key findings, causes and recommendations of the CSB report to Xcel shareholders so that the owners of Xcel are fully informed of the report contents and how Xcel intends to prevent a similar accident in the future.

Xcel Energy, Inc. 2008-01-I-CO-R12

See below for recommendation text.

RPI Coating Inc. 2008-01-I-CO-R13

Revise your confined space entry program and practices. At a minimum

- a. Require continuous monitoring for flammable atmospheres at appropriate locations and elevations within a confined space where work activities involve the use of flammables or where flammable atmospheres may be created.
- b. Prohibit entry or require evacuation of a confined space if the atmospheric concentration of flammable vapors is 10 percent of the LEL or higher.
- c. Ensure that confined spaces such as penstocks be managed as permit-required that are so large or part of a continuous system that they cannot be fully characterized from the entry point. Ensure that such spaces are

monitored for hazardous atmospheres both prior to entry and continuously in areas where entrants are working.

- d. Ensure that evacuation plans for penstocks that have only one egress point provide for alternative escape routes and/or refuge chambers.
- e. Ensure the implementation of a written confined space rescue preplan for each designated permit space. Address staging and methods of rescue for each designated permit space including whether a rescue team is required to standby outside the space. Require that confined space rescue teams be standing by at the permit spaces where the hazards pose an immediate threat to life or health including the hazard of a potential flammable atmosphere.

RPI Coating, Inc.

2008-01-I-CO-R14 Based on the findings and conclusions of this report, hire a certified safety professional to conduct periodic safety audits at your worksites. At a minimum, assess safety training, confined space safety, safe handling of flammables, emergency response, rescue, and fire prevention.

2008-01-I-CO-R15 Ensure that all journeyman painters have received safety training equivalent in content to that covered in the Joint Apprenticeship program. At a minimum, address confined space safety, safe handling of flammables, emergency response and rescue, and fire prevention.

The Society for Protective Coatings (SSPC)**2008-01-I-CO-R16**

See below for recommendations text.

American Public Power Association (APPA)**2008-01-I-CO-R17**

Publish safety guidance addressing the hazards and controls for using hazardous materials including flammables in confined spaces and the unique hazards of penstocks. At a minimum

- a. In controlling hazards in confined spaces, implement a hierarchy of controls by first attempting to eliminate hazards or substitute with a less hazardous material(s) or method(s). Examples include performing work outside of a confined space where reasonably practicable or substituting a flammable material with a non-flammable one.
- b. Establish a maximum permissible percentage substantially below the LEL for safe entry and occupancy of permit-required confined spaces.
- c. Recommend that confined spaces that are large, or part of a continuous system such as a penstock, always be managed as permit-required as defined in the OSHA Confined Space Standard, and that such spaces always be monitored for hazardous atmospheres both prior to entry and continuously in areas where work is being performed.
- d. Ensure that evacuation plans for penstocks that have only one egress point provide for alternative escape routes or refuge chambers.
- e. Provide guidance for implementing a written confined space rescue plan. Address staging and methods of rescue for each designated permit space including whether a rescue team is required to stand by outside the space. Require that confined space rescue teams be standing by at the permit

spaces where the hazards pose an immediate threat to life or health,
including the hazard of a potential flammable atmosphere.

Southern California Painting and Drywall Industries Joint Apprenticeship and Training Committee

2008-01-I-CO-R18 Require that all journeyman painters who are employees and/or members have received safety training equivalent in content to that covered in the Joint Apprenticeship program. At a minimum, address confined space safety, safe handling of flammables, emergency response and rescue, and fire prevention.

2008-01-I-CO-R19 Include a safety knowledge and skills component to your journeyman and apprentice evaluation criteria.

APPENDIX A: INCIDENT TIMELINE

Date	Time	Detail
Summer 1964		Construction of upper dam and reservoir underway, as part of the Cabin Creek Pumped Storage Hydroelectric Project.
1967		Original coal tar-based epoxy coating applied in penstock.
September 20, 2000 - December 9, 2000		Initial inspection and evaluation of the penstock determines that the internal epoxy coating of the steel-lined section shows signs of deterioration, including blistering and cracking.
June 4, 2001		Xcel internal report on the 2000 inspection states that corrective action to repair the areas of deterioration must be implemented to prevent continued corrosion and unacceptable pitting damage.
September 25, 2001		Robison-Prezioso Bay Bridge project incident kills a private citizen.
January 4, 2002		Robison-Prezioso Bay Bridge project employee fatality incident.
2004		Xcel hires a contractor to explore the possibility of creating a permanent access to penstock, but the project is rejected due to insufficient time to obtain FERC approval. RPI interstate Experience Modification Rate (EMR) is 0.93.
~ October 2004		A decision is made to recoat the penstock during the 2004 outage as a result of a metallurgist's inspection, which notes that the interior liner is peeling up to the concrete section.
2005		RPI interstate EMR is 1.03
2006		2006 SSPC audit finds that RPI has "No documentation of craft-worker assessment." RPI interstate EMR is 1.28.
January 3, 2006		The KTA-Tator Coating inspection contractor submits proposal for the penstock recoating project to Xcel.
November 1, 2006		Xcel reviews the existing penstock recoating plan.
October 1, 2006		Xcel conducts "Safety and Health Hazard Assessment Survey," focusing on the abrasive blasting portion of the recoating project work, but not the risks of epoxy recoating work associated with using a solvent in a confined space.
2007		Robison-Prezioso, Inc. is renamed RPI Coating; the company is ranked the nation's seventh-largest specialty paint company based on revenues in 2005, according to Engineering News-Record.

January 16, 2007		The KTA-Tator coating assessment contractor contracts with Xcel to inspect and report on the quality of RPI's penstock re-coating work for 2007 penstock recoating project.
January 17, 2007		Xcel's internal hazard assessment of the penstock re-lining project identifies the penstock as having a confined space hazard.
Spring 2007		An Xcel civil engineer identifies "major items of concern" with the penstock recoating project, including a lack of an alternative exit.
April 2007		Xcel issues an RFP to multiple vendors to recoat the penstock. Proposal asserts that an Xcel project manager will be fully integrated into the contractor's safety program. Only one vendor meets criteria for successful completion of the job, but the vendor's cost estimate exceeds Xcel's anticipated budget.
June 2007		First bid submissions evaluated; one company meets criteria but cost estimate is \$450,000 over Xcel's estimated budget; Xcel resubmits the project for additional bids.
July 11, 2007		Clear Creek County Fire Authority conducts an emergency drill at the Cabin Creek facility, rehearsing a fire response to the power production office facility; this drill does not involve the penstock or a confined space rescue.
Late July 2007		RPI and one other company meet the criteria for consideration as the potential recoating contractor; although the competing bidder is more technically qualified and RPI Coating's safety record is poor, RPI is selected due to cost.
August 27, 2007		RPI requests a copy of Xcel's Cabin Creek site confined space procedures from the penstock recoating project team leader and the Xcel Cabin Creek plant manager. Plant manager states information will be covered in contractor orientation.
Late August – mid September 2007		RPI contractors begin arriving at the Xcel Cabin Creek site.
September 4, 2007		KTA-Tator project engineer sends review of RPI coating application plan, project schedule, coating application procedures, and product data sheets for epoxy materials to the Xcel recoating project team leader. The Xcel project scheduler provides contractor orientation with an RPI foreman and five contractors (of the 14 RPI employees involved in the penstock work). The orientation form indicates that all contractors are trained for confined space entry and that MSDSs have been provided to Xcel plant management. RPI notifies the Xcel scheduler that the contractors will be using a "ketone" solvent to clean the sprayer inside the penstock.
September 5, 2007		Xcel and RPI Coating hold a "Preconstruction Meeting" where project-specific safety concerns are to be identified; however, the use of flammables within a confined space and the need for emergency response and rescue plans are not discussed. Xcel identifies RPI's high EMR rate during the meeting and requires RPI to take extra precautions and informs RPI that Xcel's Stop Work Policy will be enforced during the penstock recoating project.
September 4-9, 2007		The upper reservoir is dewatered.

September 10, 2007		An instructor from Southern California Painting and Drywall Industries (SCPDI) District 36 Training Center conducts a six-hour safety refresher training session pertaining to OSHA-required topics at the Xcel Cabin Creek site for nine of the 14 RPI industrial painters at the request of RPI's safety director. This training consists of watching safety videos on each topic and multiple-choice exams on the information; the training is general in nature and not tailored to all site-specific safety risks of the penstock work.
September 11-October 2, 2007		A number of confined space entry permits and air monitoring logs are completed by RPI that indicate that continuous air monitoring is required inside the penstock. Logs reveal that KTA-Tator and Xcel employees entered the penstock on several occasions to inspect and/or review RPI Coating's work progress.
September 12, 2007		110 gallons of MEK (two 55-gallon drums) delivered to Cabin Creek site. RPI conducted a test spray with the epoxy and MEK at Cabin Creek site; the Xcel principle engineer was present during this test spray.
September 15, 2007		RPI reports trouble with 480 volt power feed to equipment in the penstock. Xcel employees enter the penstock to troubleshoot the electrical equipment. Incorrect wiring is modified.
September 16, 2007		Entry into the penstock is delayed 2 hours due to high carbon monoxide (CO) levels. RPI experiences additional electrical service problems inside penstock. Foreman rewires an electrical spider box in the penstock for RPI Coating.
September 19, 2007		Xcel Cabin Creek personnel leave high bay fans on to ventilate errant CO from coming down penstock to hydroelectric plant's substation lower level.
September 21, 2007		RPI Coating begins sandblasting inside the penstock; the company is 5 days behind its tight 10-week schedule.
September 22, 2007		The Xcel Penstock Reline Project Manager observes RPI Coating conducting abrasive blasting inside the penstock and notes: "Work conditions inside the penstock are highly hazardous on many levels. In the best of conditions, the coating removal is dirty, nasty work." KTA-Tator conducts an initial pre-job hazard assessment of the penstock, noting that the MSDSs for all coatings and solvents used in the project are available. Inspector also notes that RPI and the Xcel penstock recoating project manager were advised on the MSDSs.
September 26, 2007		Xcel employees enter the penstock to perform welding on weep holes to stop leaks. The KTA-Tator inspector conducts a "Task Summary: Coating Observation Hold Points" inspection of the penstock interior. Inspection identifies the use of thinner as part of the coating materials mixing and pre-application process, and documents the necessity of using thinner/solvent to flush the sprayer system equipment (including hoses, nozzles, and the sprayer itself).

October 1, 2007	8:00 AM	Xcel personnel conduct a safety evaluation of RPI's sandblasting work inside penstock; no unsatisfactory items are noted.
	~12:00 PM	An Xcel welder enters with the RPI Coating foreman to begin welding around the leaking seep hole/cap in the penstock. The welder does not sign into the log book at the penstock's entrance.
October 2, 2007	Morning of	Sand-blasting activities, including hand sanding and grinding of the walls, are completed. RPI employees began the preparatory steps for applying the new coating onto the penstock interior. No special precautions are taken beyond those in place prior to starting the sandblasting operation.
	8:00 AM	Xcel welder completes welding job around the leaking seep hole/cap in the penstock.
	1:10 PM	RPI project supervisor and KTA-Tator inspector leave for lunch. RPI employees continue attempts to apply epoxy to the first 12-15 feet of the penstock's interior, but difficulties with the sprayer and epoxy mixture prevent satisfactory application.
	~1:55 PM	A flash fire ignites at the sprayer in the immediate vicinity of the base hopper while the contractors flush the system with MEK solvent. This rapid fire catches one contractor's sleeve on fire and quickly engulfs a number of buckets of solvent located on and around the scaffold of the epoxy sprayer.
	1:59 PM	A worker rapidly exits from the penstock access door and runs to notify the Xcel control board operator about the fire in the penstock.
	~2:00 PM	The Xcel employees at upper reservoir mushroom hear a "whoosh," followed by yelling, but what is being said is unintelligible.
	2:03 PM	Clear Creek County dispatch receives a 9-1-1 call from the Xcel control board operator regarding the fire and initiates emergency response.
	2:11 PM	The Clear Creek County Sheriff's officers' response vehicle arrives at the Cabin Creek site.
	2:20 PM	Xcel operator log book documents: "Emergency services w/o confined space fire training arrived. They have summoned a Denver team."
	2:22 PM	Additional emergency responders from various districts/units arrive at Cabin Creek site.
	2:25 PM	West Metro Rescue asked to respond to Cabin Creek site.
	2:30 PM	An RPI contractor retrieves and gives the MSDSs to the Georgetown Police Department. Henderson Mine Rescue team asked to respond to Cabin Creek site.
	~2:45 PM	Final radio communication from the trapped workers is received by emergency responders and co-workers.

	2:47 PM	A small group of responders and an RPI employee enter the penstock through the access door, travel up the penstock, but exit shortly thereafter due to the thick black smoke conditions.
	~3:00-3:15 pm	Xcel employees at the upper reservoir mushroom intake report seeing ash and flecks of burned material come out of the penstock.
	3:15 PM	SCBA oxygen tanks are dropped into mushroom upper end of penstock.
	3:25 PM	Residual smoke evident from penstock access door.
	3:30:37 PM	A growing smoke cloud is evident around the penstock access door.
	3:40 PM	West Metro Fire Rescue arrives at Cabin Creek.
	3:54 PM	A cloud of smoke remains evident in front of the penstock access door.
	4:10 PM	Henderson Mine Rescue arrives at Cabin Creek
	4:45 PM	Emergency responders wearing SCBA enter the penstock
	5:35 PM	Emergency responders on site receive the first order from Incident Command to fight/extinguish the fire; Henderson Mine team to enter.
	5:45 PM	Henderson Mine team enters the penstock through the access door to check air quality, size up the fire, and locate/rescue the trapped contractors.
	~9:00 PM	Xcel personnel allowed back into the Cabin Creek substation building, as air monitoring results are found to be at safe levels.
October 3, 2007	2:00 PM	Fatally injured workers are removed from the penstock.
	8:00 PM	The incident scene is released back to Xcel.

APPENDIX B: REGULATORY HISTORY OF RPI COATING, INC.

OSHA Inspection and Citation History

APPENDIX C: INVENTORY OF FLAMMABLE AND COMBUSTIBLE MATERIAL IN PENSTOCK

Flammable and Combustible Material in Penstock	Distance from Sprayer	Number of buckets ¹¹⁹
One (2-gal) bucket with MEK, heavily melted at scaffolding ¹²⁰	Between 79 ft and 91 ft	1
Three 5-gallon buckets of epoxy/MEK mixture (~12 gallons, of which ~5 gallons were MEK) on penstock floor, adjacent to sprayer stage	On floor, adjacent to sprayer	3
Three buckets of MEK (~11-12 gallons) and at least eight buckets of epoxy (epoxy buckets completely melted and, therefore, unable to determine if base or hardener; only handles survived fire)	On stage with sprayer	11
Eight (5-gal) buckets of base; three (5-gal) additional melted buckets of base; one (2-gal) bucket of hardener; and indeterminate number of completely melted buckets	13 ft, 9 3/8 in	12+
Twelve (2-gal) buckets of hardener; indeterminate number of completely melted buckets	101 ft, 1 in	12+
Ten (5-gal) buckets of base; 20 (2-gal) buckets of hardener	172 ft, 11 7/8 in	30
Four (2-gal) buckets of hardener	228 ft, 3 3/4 in	4
Ten (5-gal) buckets of base at 500' mark in penstock	380 ft, 3 5/16 in	10
Nineteen (5-gal) buckets of base	532 ft, 2 7/8 in	19
TOTAL NUMBER OF BUCKETS INSIDE PENSTOCK		102+

¹¹⁹ The number of buckets, instead of actual volumetric quantity, of the epoxy and MEK are provided here because a number of the buckets were destroyed in the fire; only the wire handles of these buckets remained post-incident. As a result, the CSB could not determine if the handles belongs to 2-gallon or 5-gallon buckets.

¹²⁰ The exact location of this bucket is unknown because it was moved while victims were being removed; distance estimate is based on CBI initial entry report that buckets were located on and under scaffolding, and knowledge that scaffolding was 12 feet long, adjacent to the west bulkhead.

APPENDIX D: EVALUATION OF IGNITION SOURCES

As Section 5.2.2 explains, numerous potential ignition sources existed in the immediate area of the sprayer at the time of the fire. Below is a detailed analysis of each potential ignition source the CSB considered. Supporting evidence for each analysis is based on examination of physical evidence, interviews with witnesses, tests on equipment preserved from the scene as evidence, and the physical and chemical properties of the materials involved at the time of the incident based on local environmental conditions inside the penstock. In certain cases, conflicting witness statements and extensive fire damage to the equipment made it impossible for the CSB to determine events and/or exact equipment configurations just before the fire; as a result, the CSB could not positively rule out several potential ignition sources due to lack of evidence.

D.1 Static Ignition of Explosive MEK Vapor-Air Mixture inside Sprayer Base Hopper

The CSB concluded that static electricity generated while flushing MEK in the base hopper was the most likely source of ignition. One worker testified that he was looking into the base hopper and saw the initial flash of MEK near the bottom of the hopper. The worker stated that he was holding a 3/8-inch diameter braided nylon, non-metal reinforced, hose with a metal JIC¹²¹ swivel connector at the end, close to the inside wall of the metal hopper. This was about 6 inches (15 centimeters) from the top and about 1 foot (30 centimeters) above the MEK surface. The hopper contained a 3-inch (8-centimeter) depth of MEK, or about one-half gallon (2 liters). The MEK was being circulated from the base hopper through the sprayer's air-driven piston pump, electric heater, piping, and hose, back into the base hopper to flush remaining epoxy particles from the sprayer.

¹²¹ JIC stands for Joint Industrial Council, which revised specifications for these types of connectors in the 1960s.

Assuming that the electric heater for the base hopper on the sprayer was not operating and the temperature of the MEK was the same temperature as the penstock¹²² (approximately 47-53 °F or 8-12 °C), the CSB determined that the hydrocarbon-air mixture in the region where the journeyman painter was holding the swivel connector was likely near its most easily ignitable composition (Appendix E). Once ignited, the brightest flame would have appeared in the bottom of the base hopper where the hydrocarbon-air mixture was optimal for combustion. Ignition inside the base hopper would have produced a rapid deflagration with an outwardly directed pressure wave, thus producing a “fireball.” This scenario matches descriptions given by the workers who saw the initial flash.

After the incident, the JIC swivel and the base hopper hose could not be located. However, the fitting on the other end of the base hopper hose was still attached to the valve on the sprayer. This fitting had an internal diameter of 0.117 inches (0.297 centimeters). In addition, remnants were found of an inner woven metal sheath that had belonged to the hose used to circulate MEK in the hardener hopper. The lack of a similar metal sheath on the base hopper hose led the CSB to conclude that the base hopper hose was most likely constructed from a non-conductive material, which was likely consumed by the fire.

Based on testimonial evidence that the pump was being operated with an air supply pressure of 10-15 psig (0.7-1.0 barg) and using the performance curves for the 56:1 King piston pump supplied by the sprayer manufacturer, the CSB estimated a maximum liquid flow rate of 4-5 gallons (15-19 liters) per minute during circulation. The maximum flow velocity of MEK through the JIC swivel was then estimated to be 12-16 feet (3.7-4.9 meters) per second. This estimate neglects the pressure drop from the King Pump to the JIC swivel connector outlet by extrapolating the pump curves to ambient pressure. Frictional losses would have occurred in the heater, the quarter-turn valve, piping, hoses, and the JIC swivel connector

¹²² The air temperature inside the penstock was fairly constant, as demonstrated by daily temperature readings taken by the KTA-Tator inspector from the beginning of the project.

itself. Since the MEK was being used to clean residual epoxy base resin from the system, it is plausible that the narrowest parts of the system (i.e., the quarter-turn valve and JIC swivel connector) could have, at least periodically, become partly blocked with resin. Therefore, a range of different flow velocities, up to a maximum of 16 feet (4.9 meters) per second, was possible during circulation, accompanied by a range of different pressures at the JIC swivel connector, depending on its orientation and any additional restrictions created by resin blockage.

The JIC swivel connector operated as a spray nozzle with pulsed flow produced by the King piston pump. Consequently, MEK liquid flowing through the JIC swivel connector would have broken up into droplets. This shearing action would have resulted in electrical charge separation with respect to the metal connector, leaving a net charge on the spray and an equal but opposite charge on the ungrounded JIC swivel connector.

The potential for static charges to accumulate on the isolated JIC swivel connector increases as the length of the hose increases and as the hose diameter decreases. The electrical resistance is proportional to hose length and inversely proportional to the hose cross-sectional area. Static charge accumulation in the swivel also becomes more likely as the MEK velocity through the swivel end connector increases, as the rate of charge separation increases, and as the operation more closely resembles a spray nozzle. Provided the liquid breaks up into a spray, the only continuous electrical path from the JIC swivel connector to ground is through the column of MEK liquid in the hose. Since circulation was carried out using a King piston pump, pulsation spraying increases the probability of a non-continuous outlet jet. Charging may have been further increased if suspended epoxy particles were present in the MEK, especially if these particles created flow restrictions at narrow points in the valve and/or JIC swivel.

The following analysis estimates the potential “spark energy” that could be stored by an isolated JIC end connector and demonstrates that the spark energy was sufficient to ignite the MEK vapor-air mixture inside the base hopper. This discussion assumes that the resistance of the hose is infinite (i.e., constructed

of a non-conductive material) compared to that of the column of conductive MEK contained within it; that the MEK was ejected as a pulsating spray jet offering no continuous conductive path to ground; and that the JIC swivel connector was held close to the hopper wall creating a potential spark gap of a few millimeters:

- The CSB calculated that the Minimum Ignition Energy (MIE) of an optimum MEK vapor-air mixture under penstock conditions to be about 0.5 mJ (Appendix E).
- Although the capacitance of the isolated JIC swivel end connector might be only 3-5 pico Farads (pF), which is typical for a small metal object, this would have increased several-fold by coupled capacitance with both the hopper wall and journeyman painter's gloved hand. The estimated range of capacitance ("C") is 7-15 pF, although larger values are possible.¹²³
- Using the formula $W = \frac{1}{2}(CV^2)$ to describe the energy of charged capacitors, where W is the stored energy (Joules), C is the estimated capacitance (Farads), and V is the spark voltage (Volts), the voltage required to yield an incendiary spark of 0.5 mJ is in the range 8,160-12,000 volts.
- The resistance to ground (R) via the column of conductive MEK contained within the hose is determined by the formula $R = \rho L/A$, where ρ is the resistivity of MEK (approximately 1×10^5 ohm-meters); L is the length of the hose (7.0 feet or 2.1 meters); and A is the internal cross sectional area of the hose (approximately 31.7 mm^2 or $3.17 \times 10^{-5} \text{ m}^2$). If these values are substituted, the resistance to ground via the hose is approximately 6.6×10^9 ohms (or on the order of 10^{10} ohms).

¹²³ An experimental simulation would be needed to obtain a more accurate value.

- Using Ohm's Law ($I = V/R$), where I is the charging current (Ampere); V is the required voltage of the isolated end connector ($V = 8,160\text{-}12,000$ volts); and R is the ground resistance through the MEK in the hose (6.6×10^9 ohms), the required charging current is in the range of 1.2-1.8 microamperes (μA). This is the charging current needed to support a voltage of 8,160-12,000 volts on the swivel connector given the leakage resistance of 6.6×10^9 ohms back to ground through the MEK in the hose.
- The estimated voltage of 8,160-12,000 volts could have produced a spark several millimeters long. Spark energies of 0.5 mJ are very small (roughly 1 percent of an automobile spark plug) and unlikely to be observed, even if a succession of such sparks were to occur.
- A circuit containing a resistor and capacitor is called an RC circuit. In this type of a circuit, current varies with time. The RC time constant of the JIC swivel is about 0.1 seconds—this is the product of resistance to ground (on the order of 10^{10} ohm) and capacitance (on the order of 10^{-11} F). The connector would be capable of charging to its maximum voltage in about five time constants, or one-half second. Sparks could therefore have occurred on a frequency of about two per second given these assumptions. Incendiary sparking would have been prevented by gaps much larger than a few millimeters or by a continuous stream of liquid from the swivel to the wall. The worst case (most frequent sparking) is for the liquid to continuously break up into spray and the swivel to be held about 0.12 inches (3 millimeters) from the hopper wall and spraying downwards. This is consistent with journeyman painter's testimony of how the hose was positioned to minimize splashing the MEK inside the base hopper.

High-velocity MEK spraying through an isolated JIC swivel connector (i.e., ~~nozzle~~) with a charging current of 1.2-1.8 μA could have accumulated sufficient stored energy to produce a series of incendiary sparks capable of igniting the MEK vapor-air mixture (i.e., having at least 0.5 mJ energy). The ignition

probability would have been greatly increased by the large number of sparks possible during circulation, plus the variety of charging conditions, spark gap geometries, and mixture compositions involved.

Although the journeyman painter was not electrically grounded, the CSB considers it unlikely that static ignition occurred from a “dorknob type” spark between the journeyman painter and the sprayer. The CSB also considers it unlikely that electrical charging of the journeyman painter’s Tyvek® coveralls¹²⁴ could have resulted in brush static discharges because evidence indicates that he was essentially stationary on the sprayer platform during the circulation operation. However, the painter might have become charged while holding the circulation swivel nozzle, which is considered a variation of this ignition source scenario. Had the painter’s glove had a hole, notably in the thumb or index finger holding the nozzle, he could have become charged to many kilovolts while the nozzle was not contacting the hopper wall. This would have allowed a spark to subsequently occur once the nozzle approached the hopper wall. Assuming his capacitance was 200 pF,¹²⁵ an incendiary spark would require a voltage of 2.2 kV and a charging current of about 0.33 μ A. Accordingly, there is less than an order-of-magnitude reduction in the charging current requirement to give an incendiary static spark and this variation has little practical importance.

Lundquist et al. (1975) observed charging currents up to about 6 μ A during airless paint spraying of conductive liquids. Although the MEK circulation operation was being carried out at much lower pressures and with a larger nozzle diameter than those used for airless paint spraying, the Lundquist et al. work shows that conductive liquids such as alcohols produce higher charging currents than less conductive liquids and that larger diameter nozzles and higher pressures (i.e., higher liquid velocities) produce higher charging currents. Their article implies that charging currents vary widely with conditions,

¹²⁴ The manufacturer of Tyvek coveralls cautions users against wearing this type of protective clothing in flammable or explosive atmospheres as doing so can generate static.

¹²⁵ 200 pF is frequently used as an average value for the capacitance of a person (Britton, 1999, p. 44).

and overall, supports the static charging scenario, although the magnitude of the charging current would need to be resolved experimentally. The need for proper grounding of paint spray nozzles is stressed in the Lundquist article. In addition, NFPA 77 (2007), the operating manual for the sprayer, and even RPI's safety program, contain safety warnings about proper grounding of equipment and the need to use conductive hoses.

D.2 Stray Current Ignition of Explosive MEK Vapor-Air Mixture inside the Sprayer Base Hopper

Some RPI workers' statements reveal that a dimming of the lights at the work area inside the penstock nearly coincided with the initial flash of the fire. These lights were powered from PDC 3, the power distribution center closest to the sprayer. PDC 3 also powered the 240-volt heaters on the pump outlets. During interviews with the CSB, these workers associated the dimming lights with the base heater coming on, but the CSB found no other evidence to support this. It can be inferred only that the voltage supplying the lights suddenly dropping was caused by increased power load as a result of the base heater turning on. The dimming lights could equally well have been caused by events outside the penstock. Power distribution center PDC 3 was preserved as evidence and examined closely by the CSB and other parties at an offsite location; no evidence of internal ignition (such as shorting) was found inside. However, the examination did reveal that the 240-volt power supply for the heaters was wired with a three, rather than a four, -prong connector. Thus, there was no ground connection in the circuit and the sprayer was operated with a floating neutral.¹²⁶ Although the sprayer was equipped with an independent

¹²⁶ A floating neutral means no neutral-to-ground bond in the electrical distribution system, which causes the neutral conductor to "float," or lose its reference to ground. Should the loading become unbalanced or an electrical short occur, the phase voltages fluctuate severely. This spider box had been damaged as a result of electrical problems early in the recoating project and repaired by an RPI employee. This individual was not a licensed electrician and lacked training certifications to perform electrical work.

grounding wire, the ground wire was not connected to any ground point when it was examined after the incident.

At the time of the flash, two spray hoses (one containing the base, the other the hardener) were attached to the sprayer, each going out to the metal mixing block. While preparing the spraying equipment inside the penstock, an apprentice painter stated that he saw a series of “sparks” jumping from the sprayer unit to one of the spray hoses when he connected it with a crescent wrench, implying faulty bonding in the spray hose. The CSB physically examined the spray hoses after the fire. Both hoses were metal-reinforced and thus, should have had electrical continuity to the mixing block, although no continuity measurements could be made due to fire damage. These sparks may have been caused by a stray current arc between the floating neutral of the sprayer chassis and the grounded metal hose connector. A ground path was likely provided, via the metal reinforcement sheath inside the hose, to the metal mixing block lying on the steel tunnel floor.

Grounding via the spray hoses to the mixing block is likely, but required the mixing block to have been in good electrical contact with the floor of the steel tunnel. The CSB noted that the position of the box on the drain pipe may have produced only intermittent contact grounding. Similarly, grounding via a spray wand requires electrical continuity through the mixing block out to the spray wand, which would also need to be in electrical contact with the steel tunnel. After the incident, the spray wands were found laying on the wood deck platform of the sprayer scaffold, so they were not grounded. The CSB concluded that at the time of the flash, the sprayer may have been grounded, but it is unlikely that the sprayer was reliably grounded.

Assuming that current was flowing to ground from the floating neutral connection, different metal components of the sprayer would have been at slightly different voltages, depending on the impedances between the components. Thus, a change in load on the 240-volt supply, caused by a sudden voltage drop at PDC 3 (resulting in the observed dimming of the lights), may have produced a change in the floating

neutral voltage on the sprayer chassis. The outcome may have been an electrical arc caused by a high voltage transient between the base hopper and the metal nozzle on the circulation hose physically held inside the base hopper by the journeyman painter. An arc could have occurred during contact/separation between the nozzle and the hopper wall. However, the use of a non-conductive hose (Section D.1) rules out a stray current arc as the ignition source.

D.3 Ignition of Explosive MEK Vapor-Air Mixture by Halogen Lights atop the Sprayer

The sprayer unit was mounted on a wheeled cart sitting on a wheeled portable tube and coupler scaffold positioned about 100 feet (30 meters) from a plywood bulkhead that had been erected to block off the steel section of penstock. The only source of illumination for the workers on the scaffold¹²⁷ on which the sprayer was sitting was a dual fixture halogen light assembly. Based on examination of physical evidence¹²⁸ and employee statements, the CSB determined that the halogen light assembly was placed on top of the sprayer pumps. Each halogen light fixture contained two 300-watt halogen bulbs. The CSB concluded that neither light had been equipped with a glass lens; witness testimony substantiated the lack of glass lenses and insufficient glass residue was found in the area after the fire to account for them.¹²⁹

The lamps were swivel-mounted on an assembly and could be oriented to point down. The base and hardener hoppers were situated below and to either side of the sprayer, with the top of each hopper approximately 25 inches (64 centimeters) from the nearest bulb, depending on the lamp orientation.

As worker statements (Section D.1) place the initial flash of the MEK vapor-air mixture inside the base hopper, ignition of a flammable (i.e., greater than LEL) MEK vapor-air mixture in the atmosphere by hot

¹²⁷ A second scaffold, positioned near the west bulkhead, had explosion-proof lights mounted to it to provide illumination for the two painters applying the epoxy to the penstock walls.

¹²⁸ The charred and melted remains of the halogen light were found on top of the sprayer pumps after the incident.

¹²⁹ The only remains of glass found in the fire debris were identified as coming from the sprayer control panel.

halogen lights, followed by an unobserved flashback into the base hopper, is possible, but considered unlikely. One of the experienced painting contractors told the CSB that the explosion-proof light on the scaffold dimmed, which he caught out of the corner of his eye while looking down primarily into the base hopper to ensure that the MEK being dispensed from the hose was not splashing – and then he saw the flash inside the base hopper. During this short period of distraction, it may not have been possible for the contractor to discern flashback from an ignition source outside the hopper. Flashback of a lean flame would have occurred in just a few seconds, and the flame would likely have been bluish. However, the CSB considers it unlikely that the contractor would not have seen the flashback from the location of the halogen lamps.

As discussed in Section D.1, it is also unlikely that an optimum vapor-air mixture (approximately 5.5 volume percent MEK) would have existed at the elevation of the halogen lights unless the base heater was operating. It is possible that a flammable mixture (>1.8 volume percent MEK) migrated by convection to the location of the halogen lights, if air ventilation was minimal, but a mixture near the LEL would have been more difficult to ignite. The work area was provided with forced, clean air ventilation conveyed through a 20-inch (51-centimeter) diameter plastic duct, magnetically attached to the metal wall of the penstock near the floor. It is unknown whether there was any appreciable air movement in the zone between the hoppers and halogen lights. The lights were located approximately at the axis of the 12-foot (3.7-meter) diameter tunnel. Assuming the air flow from the duct was directed toward the bulkhead at the time of the incident, the flow velocity back toward the tunnel entry would have been slow; the average upstream velocity in the penstock would be reduced by a factor of approximately 52 relative to the duct outlet velocity. Air velocity would have been highly variable across the tunnel at the location of the sprayer unit, and additional evidence suggests that a stagnation region may have existed on the upstream side of the unit. After using MEK to clean the spray wands on the scaffold near the west bulkhead, one of the two contractors at the bulkhead left the work area to get a fan due to the buildup of MEK “fumes.” He

told the CSB that, as he squeezed past the scaffold holding the sprayer, there was ~~no~~ air movement at all” in the vicinity of the sprayer.

Since the MEK was being sprayed into the hopper at about 12-16 feet (3.7-4.9 meters) per second, it is possible that some liquid mist would have migrated toward the lamps by convection, increasing the overall fuel concentration and/or that some splashing of coarse droplets occurred (Section D.3.3).

However, ignition of the MEK vapor-air mixture at the halogen lamps would have produced an unconfined flash fire centered at the contractor’s head, rather than a deflagration inside the base hopper that propagated toward him.

While an eyewitness statement indicates that the base heater was turned off, this would not rule out the possibility of a sudden catastrophic failure of the base heater thermostat. If the 3.4 kW electric heater did come on, causing the observed dimming of the lights, the MEK temperature could have increased very rapidly. A malfunctioning thermostat may have led to unregulated heating; the set point of 95 °F (35 °C) for the base epoxy corresponded to a level of 5.5 on the thermostat dial, which had a scale of 1-9. Under penstock conditions, MEK boils at 154 °F (68 °C). Only a small volume of MEK was in the lines between the heater and the end of the hose. It is plausible that this volume was heated sufficiently to convect ~~as~~ “easily ignitable” concentrations of vapor up to the halogen lights. For this to occur, the entire volume of MEK in the hopper would not have had to have been heated to the same temperature, since heated liquid would have been sprayed over a large area inside the hopper, creating a large surface for evaporation. However, this scenario represents a great deal of inference from the fact that the lights dimmed just before the flash and is inconsistent with eyewitness accounts that the initial flash was inside the base hopper. Since the thermostat was destroyed by the fire, the CSB cannot rule out the possibility that the thermostat failed catastrophically.

D.3.1 Ignition Caused by Halogen Lamps

The CSB also evaluated four distinct sub-cases involving ignition by halogen lamps.

D.3.1.1 Ignition Caused by Halogen Bulb Breakage

Halogen bulbs can break spontaneously and explode, due to the pressurized gas inside. Bulb breakage can be caused by contamination of the quartz surface, such as by a fingerprint, or via halide migration (Babrauskas, 2003). The internal filament of a halogen bulb can operate at 5,072 °F (2,800 °C) with somewhat lower temperatures on the support. The inside bulb wall temperature may be around 1,382 °F (750 °C) (Cayless & Marsden, 1983). These temperatures certainly would have been capable of igniting an explosive MEK vapor-air mixture. In the current case, bulb breakage might have been attributed to excessive vibration from the pumps or impact of MEK droplets sprayed from the hoppers. A portion of a hot filament from a bulb could have even fallen into the base hopper. However, the CSB ruled out halogen bulb breakage as a potential ignition source, when intact bulbs from both halogen lamp fixtures were found still mounted in their ceramic housings on top of the sprayer after the fire. All the bulbs were covered in soot, but that can be attributed to rich combustion of MEK during the fire.

D.3.1.2 Ignition by Bulb Terminal Arcing

In this scenario, a loose electrical connection at one end of a halogen bulb would periodically arc at the spring contact fitting. This arcing could be exacerbated by vibration from the pump fixture on which the lamps were positioned. It is unlikely a standard torque was applied to the mounting plates, so these might also have been subject to excessive vibration.

If the lamp prongs were made from hard tungsten or tungsten alloy, evidence of arcing (local melting or pitting) is more likely to be found on the spring contacts in the ceramic connectors. The spring contacts have a much lower melting point than the lamp prongs, assuming they are made of brass or steel. While arcing at the bulb terminals was not specifically investigated, visual inspection of these terminals did not reveal arcing patterns.

D.3.1.3 Ignition by Hotspot on Bulb

In a published account describing a vapor ignition by a 300-watt halogen bulb involving gasoline vapor (Babrauskas, 2003), violent impact caused the filament to move, which created an external hotspot on the quartz envelope without bulb breakage. In the absence of hotspots, gasoline vapor ignition did not occur. Most gasoline listed in NFPA 325 (NFPA, (out of print)) have roughly the same autoignition temperature as MEK. No violent impact occurred in the penstock; however, a hotspot could have developed via impact of coarse droplets from the base hopper.

If a droplet of MEK containing dissolved ~~base~~ resin were splashed onto the hot bulb region, the result could have been formation of a transient hotspot on or near the bulb. The nominal 1,832 °F (1,000 °C) hotspot would be created as residual epoxy resin decomposed and combusted either as a glowing ember or small flame.

Upon impact of an MEK-based mixture on a hot surface at approximately 932 °F (500 °C) or more, the MEK solvent will immediately evaporate. If the MEK vapor does not ignite first, the residual base might decompose and combust either as a glowing hotspot or small flame, which would create very high local temperatures commensurate with MEK's lower limit flame temperature of about 2,192 °F (1,200 °C). It is well known that the hotspot ignition temperature of ignitable gas mixtures is a strong function of hotspot size and contact time, although the ignition phenomenon is complex. At temperatures close to the lower limit flame temperature, hotspots on the order of 1 millimeter in diameter can cause almost immediate ignition of optimum vapor-air mixtures. As the halogen bulbs were covered by soot during the fire, the CSB cannot determine if a hotspot occurred on one or more of the bulbs.

D.3.1.4 Autoignition of Heated MEK Vapor Volume

A review of the literature shows that the surface temperature of individual 300-watt halogen bulbs in torchiere lamps is about 968 °F (520 °C) (CPSC, 1996); higher values approaching 1,100 °F (593 °C) have also been reported. The temperature varies with bulb diameter, design, and degree of confinement. The

halogen lights had top reflectors and should have achieved higher temperatures than torchiere lamps, which are open at the top and lose heat by free convection.

The halogen lamp fixtures used in the penstock each contained two closely spaced 300-watt bulbs, so the bulb surface temperatures would have been greater than for single bulbs, especially on the adjacent hot quartz surfaces. To the CSB's knowledge, no relevant tests have been done on the type of halogen lamp fixtures involved in the MEK fire. Bulb surface temperatures could, in principle, be measured by two-color pyrometry or other means, but no such testing was performed.

An experiment would need to be devised and run to determine whether an MEK vapor-air mixture could be ignited by a hot halogen bulb fixture at optimum concentration; if not, it would rule out autoignition at all concentrations. Standard autoignition temperature (AIT) tests hold the vapor-air mixture for several minutes in a glass vessel at the test temperature; they are conservative relative to transient heating by a hot halogen bulb surface. The lack of confinement (i.e., lenses not present) means that transitioning from cool to hot flames could not have occurred via pressure increase.¹³⁰ The CSB found various published values for the AIT of MEK, but the most reliable is reported to be 887 °F (475 °C) at one atmosphere (760 mmHg) (Brandes, et al., 2005, pp.1-5); this corresponds to the minimum temperature for spontaneous ignition of the optimum MEK-air mixture in a 200 milliliter (ml) glass flask using the IEC 60079-4 test method. However, the low atmospheric pressure in the penstock may have elevated the MEK AIT.

The CSB concluded that the halogen bulb surface temperatures would likely need to be significantly higher than the AIT of MEK (at least 125-212 °F (52-100 °C) above the standard AIT) for MEK vapor ignition. Ignition is far more likely had a hotspot (or small flame) been created on a bulb or an adjacent hot surface.

¹³⁰ MEK is subject to forming cool flames, a phenomenon that can result in a range of reported AITs.

D.4 Hot Surface Ignition by the Sprayer Heater(s)

The CSB determined that even if the sprayer base heater had been operating at full output, its surface temperature would be too low to create MEK vapor-air ignition. The heater was rated for a Class 1, Division 2 atmosphere, with a T2 (482 °F/250 °C) rating; the standard AIT of MEK is 887 °F (475 °C).

In addition, both heaters (base and hardener) were radiographed, electrically tested, and physically examined after the fire by an independent consultant hired by OSHA. The consultant determined that the heaters did not provide an ignition source for the fire, nor did they contribute to the spread of the fire.

D.5. Compression Ignition inside One of the Sprayer Piston Pumps

In theory, if an air-operated piston pump runs —~~dr~~,” adiabatic compression of air plus residual vapor could lead to temperatures that exceed the MEK AIT. The CSB was able to rule out this potential ignition source, as both hoses were reportedly circulating MEK at the time of the fire. The journeyman painter also reported a level of about 3 inches (8 centimeters) of MEK in the base hopper where the initial flash was observed.¹³¹ Thus, neither piston pump could likely have been running —~~dr~~” at the time of ignition.

D.6 Electrical Spark from Heater Control Box

Electrical power for the two heaters was supplied by the heater control panel. Unlike the sprayer control panel, which used low voltage electronics supplied from a pneumatic generator and was approved for use in flammable atmospheres, the heater control box was an aftermarket addition and was not rated for use in flammable atmospheres. Although the heater control box was severely damaged by the fire and its internal components were charred,¹³² visual examination by the CSB revealed that the incoming power to

¹³¹ The CSB could not determine the amount of MEK inside the hardener hopper at the time of the incident, but survivor statements indicate that MEK was also being circulated in this hopper at the time of the incident.

¹³² The CSB found no evidence that an internal deflagration had occurred inside the box.

the box was 240-volts and fuses. The heater control box was found to contain open circuits, relays, and other solid-state components. Consequently, the CSB determined that it was possible for an electrical spark generated inside this box to ignite an explosive MEK vapor-air mixture, but for the same reasons described in Section D.2, this ignition source is unlikely because the heater controls were not likely being used at the time of the incident; an explosive MEK vapor-air mixture probably did not exist outside the base hopper, and a spark, if it did occur, would have had to flash back into the base hopper unobserved.

APPENDIX E: MEK FLAMMABILITY PROPERTIES AT PENSTOCK CONDITIONS

Flammability data, such as flashpoints and lower and upper explosive limits are typically measured at standard atmospheric conditions. As this incident occurred inside a penstock at an elevation of 10,050 feet (3,063 meters) above sea level, the CSB needed to recalculate this data to account for the effects of the elevation.

Using data showing changes in atmospheric pressure at various site elevations (UIG, 2004), the CSB calculated the atmospheric pressure at the penstock fire location to be 523 mmHg.

Next, the equilibrium vapor pressure equation is given by

$$\text{EVP} = \exp (A + B/T + C \ln T + DT^E)$$

Obtaining constants A-E from the Design Institute for Physical Properties Research (DIPPR) database,¹³³ the boiling point of MEK at 523 mmHg was calculated to be 154 °F (67.8 °C). This compares with the “normal” value of 175 °F (79.4 °C) at 760 mmHg (standard atmospheric pressure).

¹³³ The DIPPR database stores thermophysical properties and parameters for correlations of temperature-dependent property models of over 1,900 components. It has been under development since 1980 and is continuously updated and enhanced. DIPPR is an industrial consortium, operating as part of AIChE.

At 523 mmHg, the vapor-liquid equilibrium curve (Figure E-1) shows that the lower and upper flammable limits of MEK in air (1.8-11 volume percent) are attained at respective equilibrium temperatures of 3 to 60 °F (-16 to 15 °C). Between these temperatures, MEK vapor in equilibrium with liquid, such as deep inside the liquid hoppers on the sprayer, is ignitable. MEK vapor becomes most easily ignitable at an —optimum” concentration of about 5.5 volume percent, attained at an equilibrium temperature of about 36 °F (2.4 °C).

Equilibrium Vapor Pressure of MEK Near Liquid Surface in Base Hopper

(Penstock Estimated Ambient Pressure = 523 mmHg)

(Assumed Hopper Liquid Temperature 47-53F)

Figure E- 1. Equilibrium vapor pressure of MEK near liquid surface in base hopper

Although the low atmospheric pressure in the penstock (523 mmHg) has negligible effect on the flammable limits, it significantly increases the mole fraction of vapor in air at any given temperature; consequently the flash point is decreased (Figure E-2). The calculated lower theoretical flash point, temperature limit of flammability (TLF), is -16 °C (3.4 °F). For ignition in the base hopper, this TLF should be more accurate than a measured flash point because of the ambient pressure and upwards flame

propagation, which occurs at lower vapor concentrations than in a standard flash point test apparatus (where flame propagation is downward).

Similarly, the “upper temperature limit of flammability” (UFL) can be calculated. The UFL is generally not sensitive to pressure in the range being considered, so the corresponding MEK vapor pressure is 57.5 mmHg to achieve 11 mole percent MEK in the vapor and the theoretical upper flammability limit (TUF) is found to be 15 °C (60 °F). This result shows that MEK in the penstock could be within the flammable range (ignitable) at all times inside a pail or hopper.

Equilibrium Vapor Pressure of Methyl Ethyl Ketone (MEK)

Figure E- 2. Theoretical MEK flammability limits at penstock conditions

With the base side pump heater not operating, the CSB determined that the circulated MEK would have been at 50 ± 3 °F (10 ± 2 °C). This range compares favorably with the unheated base resin temperature of

47 °F (8.3 °C) measured by the journeyman painter with a laser temperature indicator, and the air temperature of 53 °F (12 °C) inside the penstock measured earlier that day by the KTA inspector. Hence, near the liquid surface in the bottom of the hopper (i.e., where the vapor-liquid equilibrium assumption is most applicable), the MEK vapor concentration should have been in the range of 7.6-9.1 mole percent. This is slightly greater than optimum concentration (approximately 5.5 mole percent), but less than the upper flammable limit (UFL) of 11 mole percent. To summarize, with the heater not operating, the entire volume of the hopper should have been within the ignitable range and capable of deflagration (i.e., rapid burning with the creation of an upward pressure wave).

APPENDIX F: LOWEST MINIMUM IGNITION ENERGY AT PENSTOCK CONDITIONS

Calculation of this parameter is significant with respect to static ignition sources having very small energies. Faulty electrical equipment is unimportant since electrical arcs should be sufficiently energetic to ignite MEK vapor over the entire flammable range.

Calcote, et al. (1952) reported the Lowest Minimum Ignition Energy (LMIE) of MEK as slightly below 0.3 mJ. However, they reported the LMIE of n-pentane at about the same value, 0.28 mJ. This is higher than the approximately 0.24 mJ published for similar paraffin hydrocarbons such as butane and hexane (Lewis & von Elbe, 1961). The latter authors also reported a significantly lower value for cyclopropane, 0.17 mJ versus the 0.22 mJ found by Calcote et al. The CSB noted that the data of Calcote et al. tend to be high compared with other LMIE values. Indeed, most of the Calcote et al. data were measured at stoichiometric composition, and only a few compounds such as MEK were tested at optimum composition (approximately 1.5 times stoichiometric in the case of MEK). The test method used by Calcote et al. usually involved electrodes with 1/8-inch hemispherical tips versus the 1/16-inch tips used by Lewis & von Elbe. Quenching effects presumably caused the measured values of Calcote et al. to be somewhat high. It has been observed that the lowest LMIEs are found with pointed electrodes at very low circuit capacitance. Since Calcote et al. used various test procedures, it is not clear exactly which procedure was used for the MEK tests. It is possible that lower values would have been found by optimizing the circuit capacitance. In conclusion, the LMIE of MEK was found to be about the same as n-pentane, whose LMIE is about 0.24 mJ. No MEK tests have been reported under truly —optimum” conditions of spark gap geometry and circuit capacitance.

Britton's method (2002) uses the heat of oxidation to estimate the LMIE of CH and CHO organic compounds:

$$\text{LMIE (mJ)} = 4.0056 - 0.06231 (-\Delta H_C / S) + 0.00024333 (-\Delta H_C / S)^2$$

Where $(\Delta H_C/S)$ = Heat of Oxidation (-100.07 kcal/mol for MEK)

Hence LMIE = 0.21 mJ

From the preceding discussion, the most easily ignitable composition should be about 1.5 times stoichiometric or 5.50 mol%.

Lowest MIE = 0.21 mJ (5.50 mol % MEK in dry air at 298 K, 1 atm)

However, the LMIE generally increases as pressure decreases. In the penstock, the ambient pressure was about 523 mmHg (0.69 atmospheres). By analogy with data for propane (Figure F-1), the LMIE of MEK at 0.69 atmospheres (523 mmHg) should be approximately 0.5 mJ. (Britton, 1999):

Figure F-1. Effect of pressure on MIE of propane in various oxygen-nitrogen mixtures

Hence, the lowest MIE for MEK is approximately 0.5 mJ (5.50 mole percent MEK in dry air at 298 K, 0.69 atm).

APPENDIX G: WORK ACTIVITIES ALLOWED IN POTENTIALLY EXPLOSIVE ATMOSPHERES

Source	Industry/Personnel	Citation/Reference	Requirement
OSHA	Permit-required confined spaces in general industry	1910.146(d)	Entry into permit-required confined spaces above 10% of the LFL is allowed provided that acceptable entry conditions for flammable vapors listed on the permit are followed.
		Appendix C Examples of Permit-Required Confined Space Programs	<p>Example 3. Workplace. Workplaces where tank cars, trucks, and trailers, dry bulk tanks and trailers, railroad tank cars, and similar portable tanks are fabricated or serviced.</p> <p>Sources of hazards. In addition to the mechanical hazards arising from the risks that an entrant would be injured due to contact with components of the tank or the tools being used, the risk also exists that a worker could be injured by breathing fumes from welding materials or mists or vapors from materials used to coat the tank interior. In addition, many of these vapors and mists are flammable, so failure to properly ventilate a tank could lead to fire or explosion.</p> <p>Application of interior coatings/linings. Atmospheric hazards shall be controlled by forced air ventilation sufficient to keep the atmospheric concentration of flammable materials below 10% of the lower flammable limit (LFL) (or lower explosive limit (LEL)), whichever term is used locally). The appropriate respirators are provided and shall be used in addition to providing forced ventilation if the forced ventilation does not maintain acceptable respiratory conditions.</p>
		Std Interpretation letter, 9/4/96	The permit-required confined spaces standard [29 CFR 1910.146] does not prohibit working in a permit-required space where the atmosphere is above 10% of the LFL. However, once the atmosphere is above 10% of the LFL, all requirements of the standard must be met. The employer must identify and evaluate each hazard to which entering employees will be exposed. Based on the hazard analysis, the employer must develop and implement the means, procedures, and practices necessary for safe permit space entry operations. If the flammable atmosphere is the result of a process involving equipment, there may be precautions with regard to the equipment that an employer would be required to follow.

Source	Industry/Personnel	Citation/Reference	Requirement
	Confined spaces using alternative entry provisions in general industry	1910.146(c)(5) OSHA Directive 2.100, page 19. 58 FR 4488	In confined spaces using alternative entry procedures, entry is permitted provided the concentration of the flammable substance does not exceed 50% of what would constitute a "hazardous atmosphere" (e.g., 5% of the LFL).
	Confined and enclosed spaces and other dangerous atmospheres in shipyard employment	1915.13(b)(3)	An employee may not enter a space where the concentration of flammable vapors or gases is equal to or greater than 10% of the LEL. Exception: An employee may enter for emergency rescue or for a short duration to install ventilation equipment necessary to start work, provided no ignition sources are present, the atmosphere in the space is monitored continuously, atmospheres at or above the upper explosive limit are maintained, and respiratory and other appropriate PPE and clothing are provided.
	Excavations	1926.651(g)(1)(iii)	In excavation and trenches, adequate precautions shall be taken, such as providing ventilation, to prevent employee exposure to an atmosphere containing a concentration of a flammable gas in excess of 20% of the lower flammable limit (LFL) of the gas.
	Underground construction (tunneling)	1926.800	When air monitoring shows, for 3 consecutive days, 10% or more of the LEL for methane or other flammable gases measured at 12 inches from the roof, face, floor, or walls in any underground work area, additional safety precautions are required. These include using more stringent ventilation requirements, using diesel equipment only if it is approved for use in gassy operations, posting each entrance with warning signs, prohibiting smoking and personal sources of ignition, maintaining a fire watch when hot work is performed, and suspending all operations in the affected area until all special requirements are met or the operation is declassified. Additional air monitoring is also required.
	Confined spaces in construction, except for diving, non-sewer excavations, and underground construction	1926.1028 (proposed)	Entry into permit-required confined spaces (PRCS) above 10% of the LFL is allowed provided conditions under which the authorized entrants can work safely are defined, including hazard levels and methods of employee protection. Monitoring procedures must also be in place to detect an increase in atmospheric hazard levels in sufficient time for the entrants to safely exit the PRCS in the event the ventilation system stops working.

Source	Industry/Personnel	Citation/Reference	Requirement

APPENDIX H: APPLICABLE OSHA CONFINED SPACE STANDARDS

H.1 OSHA General Industry Standards (29 CFR 1910)

The CSB reviewed OSHA safety and health regulations addressing confined space requirements applicable to general industry as well as those for construction. The CSB determined that OSHA general industry standards codified at 29 CFR 1910 apply to the penstock recoating project at the Xcel Cabin Creek facility based on OSHA definitions of construction versus maintenance [29 CFR 1910.12(b), 29 CFR 1926.13(a) and 1926.32(g)]. Although the contractor (RPI) was using construction practices (e.g., sandblasting and coating) to physically change the power plant, the penstock was existing equipment (constructed in 1967) that was being refurbished by removing the old coating and applying new. Consequently, this work activity is classified as maintenance rather than new construction and falls under the OSHA general industry standards.

H.2 Electrical Power Generation (29 CFR 1910.269)

Although the CSB found that OSHA's electrical power generation standards apply to the Xcel Cabin Creek hydroelectric power plant, these standards contain no specific regulations pertaining to penstocks, and the penstock does not meet the definition of an "enclosed space" as outlined in this standard. As discussed in Section 2.1, the Xcel Cabin Creek facility is a pumped hydroelectric power plant that supplies electricity to residential customers during peak demand periods. As its purpose is to generate electrical power, the Xcel Cabin Creek facility is subject to the regulations of OSHA's general industry standard that apply only to electrical power generation, transmission, and distribution codified at 29 CFR 1910.269. In fact, 29 CFR 1910.269(a)(i)(B)(2) specifically states that "water and steam installations, such as penstocks, pipelines, and tanks providing a source of energy for electric generators" are subject to these standards. A review of the 1910.269 standard reveals that it contains no specific requirements for penstocks, but does contain specific requirements for "enclosed spaces." Subparagraph (e) outlines safe work practices, evaluation of potential hazards, atmospheric testing, ventilation, attendants, and rescue

provisions that are applicable to ~~—~~enclosed spaces.” However, the definition of an ~~—~~enclosed space” at 29 CFR 1910.269(x) states that these spaces are ~~—~~designed for periodic employee entry under normal operating conditions”; thus, the penstock cannot be classified as an ~~—~~enclosed space” under the 1910.269 standard because under normal operating conditions the penstock is filled with water and employees do not enter. A note beneath the ~~—~~enclosed space” definition states that if the space meets the criteria for a permit-required confined space then the provisions of 29 CFR 1910.146 apply.

H.3 Permit-Required Confined Spaces (29 CFR 1910.146)

See Section 10.0, ~~—~~Regulatory and Industry Standards Analysis.”

APPENDIX I: CSB CONFINED SPACE INCIDENTS DATA INCLUSION CRITERION AND LIMITATIONS

To determine the prevalence of confined space incidents attributable to a flammable atmosphere, the CSB researched and identified a number of confined space incidents from various sources.¹ Incidents were included in the CSB database if they occurred in a confined space and resulted from a fire or explosion where monitoring of the atmosphere and establishing safe flammable limits could have played a role in preventing entry or requiring exit from the space. The CSB search included only incidents that occurred in what was determined to be an OSHA defined confined space. Incidents were selected if they occurred after April 15, 1993, and if work was being performed inside the confined space where a flammable atmosphere was either created by the work being conducted or present prior to entry resulted in an explosion or fire.

The CSB obtained a majority of these incidents by using specific search terms to query OSHA's IMIS database where inspection records of OSHA investigations are recorded and categorized. The CSB's data search retrieved incidents containing the words "confined space" in the summary words, incident summary description, or title of the inspection report. If an incident occurred in a confined space, but the words "confined space" did not appear on that inspection report as a descriptor, it was not initially identified as an incident of interest. Only after subsequent queries into the IMIS system to identify incidents that contained a "flammable atmosphere," "explosion," or "chemical fire," among others, were additional confined space incidents identified. For example, a few of our incidents did not contain the

¹ Sources included the NIOSH Fatality Assessment and Control Evaluation (FACE) Program reports, the OSHA Inspection Data from OSHA's Integrated Management Information System (IMIS) from 1993 to the present, media reports and inquiry into the Agency of Toxic Substance and Disease Registry (ATSDR), and the Hazardous Substances Emergency Events Surveillance (HSEES) system to determine the prevalence of incidents attributed to a flammable atmosphere.

words "confined space" but were retrieved under these search terms and found to contain OSHA confined space citations.

Additionally, a few of the incidents included in the CSB dataset were obtained through Internet media searches. These incidents were then checked in the OSHA IMIS database and matched with their correlating OSHA inspection number. If these media incidents contained OSHA confined space citations under the standard 1910.146, they were included into the CSB database. However, some incidents found through the media search had an OSHA inspection number but not an OSHA inspection report description or confined space citations indicating that the incident occurred in a confined space; thus, they were not included in the CSB dataset. Other OSHA IMIS incidents contained OSHA confined space citations but no incident summary indicating that the accident occurred in a confined space and were therefore excluded from the dataset. Incidents were included only in the CSB dataset if the OSHA confined space citations were connected to the explosion or fire. As a result of incomplete or inconsistent reporting of confined space incidents in the OSHA IMIS system, the voluntary nature of incidents reported to NIOSH to generate the NIOSH Fatality Assessment and Control Evaluation (FACE) reports and the lack of specific confined space data in ATSDR HSEES, the CSB concluded that there is a likely undercount in confined space incidents that occurred in a flammable atmosphere in our data.

Confined space incidents obtained from OSHA's IMIS, the NIOSH FACE reports, ATSDR, and the media were categorized into two subgroups. Subgroup A contained incidents that matched our inclusion criterion, and subgroup B contained incidents that did not fully meet our inclusion criterion. Of the 105 incidents compiled by the CSB, 53 were subsequently categorized as A and determined to be a result of a flammable atmosphere in a confined space.

APPENDIX J: SIMILAR RECENT CONFINED SPACE INCIDENTS INVOLVING FLAMMABLES INVESTIGATED BY THE CSB

Since the Xcel penstock incident, the CSB has investigated two additional confined space incidents involving workers who were injured or fatally wounded by an explosion or fire involving flammables in a confined space.

13.1.1 ConAgra Foods Processing Plant Explosion

On February 16, 2009, a North West Metal Fabricators contractor was killed while attempting welding repair to a 1¼ by ½ inch (3.2 by 1.3 centimeters) crack on a clarifier tank at a ConAgra facility in Boardman, Oregon. The 23-foot (7-meter) tall, 12-foot (3.7-meter) diameter tank had an open top structure and cone-shaped bottom covered by a metal skirt. The tank, used in a potato-washing process for separating dirt and debris from waste water, was classified as a permit-required confined space.

The CSB investigators found an accumulation of approximately 14 inches (36 centimeters) of bacteria-rich debris and water under the tank's skirting as a result of the material leaking through the crack.

Through sample analysis, the CSB determined that bacteria in this debris and waste water likely produced flammable gas. When the contractor started welding, the arc generated acted as the source of ignition, resulting in a confined vapor explosion. Air monitors were used to detect flammable vapors near the entrance of the tank but were not used in the vicinity where the hot work was conducted.

13.1.2 TEPPCO Terminal Explosion

Three contractors from C&C Welding, Inc. were fatally injured on May 12, 2009, in an explosion at the TEPPCO Partners LP McRae Terminal in Garner, Arkansas. The workers were using a cutting torch above the floating roof inside a 67,000-barrel (10,700 cubic meters) capacity gasoline storage tank when an internal explosion blew both the floating roof and the fixed roof off the tank. The contractors were preparing for the installation of a gauge pole, and at the time of the explosion were using an oxygen acetylene cutting torch to cut into the secondary roof of the internal floating roof of the tank. The

contractors were issued both a hot work permit and confined space permit to flame-cut the roof and enter the tank. However, an evaluation of both the hot work and confined space entry permit and policies of TEPPCO Partners LP and C&C Welding Inc. reveals no maximum or minimum LEL limits for work within confined spaces. The flame-cutting activity most likely ignited flammable vapors inside the tank.

The Honorable Blake Farenthold
Chairman
Subcommittee on the Interior, Energy, and Environment
Committee on Oversight and Government Reform
U.S. House of Representatives
Washington, DC 20515

Dear Chairman Farenthold:

Thank you for your December 8, 2017 letter requesting information about Department of Homeland Security (DHS) guidance documents.

Your inquiry is very important to us. The appropriate DHS Components are preparing information so we may respond with the accuracy and completeness that your letter deserves. Please know that the Department's leadership has accorded your letter a high priority, and we are endeavoring to respond to you as soon as possible.

The cosigners of your letter will receive a separate, identical interim response. Should you have any questions in the interim, please ask your staff to contact my office at (202) 447-5890.

Respectfully,

A handwritten signature in black ink, appearing to read "Ben Cassidy", written in a cursive style.

Homeland Security

March 14, 2018

The Honorable Trey Gowdy
Chairman
Committee on Oversight
and Government Reform
U.S. House of Representatives
Washington, DC 20515

Dear Chairman Gowdy:

Thank you for your December 8, 2017 letter. Secretary Nielsen asked that I reply on her behalf.

The letter requested a list of guidance documents issued by the Department of Homeland Security (DHS) since January 1, 2008. Following consultation with the Department's Components, we are enclosing a list of the main types of public-facing guidance documents issued by DHS. DHS Components, including its main regulatory Components – the Federal Emergency Management Agency, National Protection and Programs Directorate, Transportation Security Administration, U.S. Citizenship and Immigration Services, U.S. Coast Guard, U.S. Customs and Border Protection, and U.S. Immigration and Customs Enforcement – issue a range of guidance documents to support their missions and inform the public.

The enclosed list provides the descriptive information that you requested, including the title, form, issuing Component, *Federal Register* citation or a hyperlink to a copy of the document (where applicable), and the significance designation by the Office of Management and Budget under Executive Order 12866. Additional guidance and materials can be found on the publicly-available DHS and Component websites and in the Federal Register.

In addition, at the direction of the Department's Regulatory Reform Task Force, DHS has reviewed, and will continue to review, guidance documents to identify opportunities for regulatory reform and cost savings. Also, as you may be aware, the Government Accountability Office (GAO) maintains a website that tracks agency submissions to GAO under the Congressional Review Act. See <https://www.gao.gov/legal/congressional-review-act/overview>.

The Honorable Trey Gowdy

Page 2

Thank you again for your letter. The co-signers of your letter will receive separate, identical responses. Should you wish to discuss this matter further, please do not hesitate to contact me.

Respectfully,

Benjamin L. Cassidy

Department of Defense

DEPUTY CHIEF MANAGEMENT OFFICER
9010 DEFENSE PENTAGON
WASHINGTON, DC 20301-9010

JAN 02 2018

JAN 02 2018

December 20, 2017

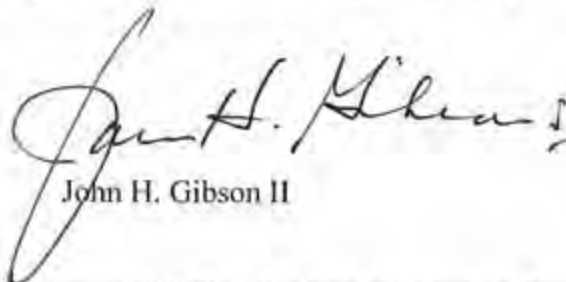

The Honorable Trey Gowdy
Chairman
Committee on Oversight and
Government Reform
U.S. House of Representatives
Washington, DC 20515-6143

Dear Mr. Chairman:

This response replies to your December 8, 2017 letter to the Secretary of Defense requesting a list of guidance documents and information about such documents issued by the Department of Defense since January 1, 2008.

The Department of Defense has issued five guidance documents since January 1, 2008 that are published in the Federal Register. Two of these documents adopt and supplement the Council on Environmental Quality regulations that implement the National Environmental Policy Act. One document provides guidance to federal financial assistance recipients regarding the prohibition against national origin discrimination affecting limited English proficient persons under Title VI of the Civil Rights Act of 1964. Two others provide interpretations regarding compliance with the Department's Military Lending Act regulation. Additional information about these guidance documents, as well as a copy of each of the documents is enclosed.

My point of contact for this matter is Ms. Patricia Toppings, Chief, Regulatory and Advisory Committee Division, Directorate for Oversight and Compliance, Office of the Deputy Chief Management Officer. Ms. Toppings may be contacted at 571-372-0485, or by e-mail at patricia.l.toppings.civ@mail.mil.

John H. Gibson II

ENCLOSURE 1

1. **Title:** Missile Defense Agency National Environmental Policy Act Implementation Procedures

2. **Type of document:** Significant Guidance

3. **Description:** These procedures implement the National Environmental Policy Act (NEPA) and adopt and supplement the Council on Environmental Quality regulations that implement NEPA by establishing policy, directing environmental planning, and assigning responsibilities in the Missile Defense Agency to prepare, review, and approve environmental documents that comply with NEPA.

4. **Date of Issuance:** August 8, 2014

5. **Issuing agency, component, office, or program:** Department of Defense, Office of the Under Secretary of Defense for Acquisition, Technology, and Logistics, Missile Defense Agency

6. **An indication of whether:**

- a. The guidance was considered significant? YES
- b. The agency submitted guidance for review by Office of Information and Regulatory Affairs? YES
 - i. The title of the guidance used in the submission: Missile Defense Agency National Environmental Policy Act Implementation Procedures
 - ii. The date submitted: February 25, 2014
- c. The agency submitted the guidance to Congress and GAO? NO
 - i. The title of the guidance used in the submission: N/A
 - ii. The date submitted: N/A
- d. The Regulatory Reform Task Force review of the guidance document, and results of review: The DoD Regulatory Reform Task Force reviewed this guidance on September 14, 2017, and recommended it be retained.

7. **To the extent applicable:**

- a. The Federal Register citation: 79 FR 46410
- b. A hyperlink to copy of document:
<https://www.gpo.gov/fdsys/pkg/FR-2014-08-08/pdf/2014-18730>
- c. The Regulation Identification Number: None
- d. Any other identification number: [Docket ID: DoD-2014-OS-0062]

maintenance and sustainment, manufacture of test articles (prototypes), test and evaluation, fielding of missile defense systems and components, and the ultimate decommissioning and disposal or transfer of BMDS components and assets at many DoD installations, other agency sites, and industrial sites around the globe. Additionally, MDA has carefully considered over 200 records of environmental consideration (RECs)/records of categorical exclusion/Air Force Form 813s documenting the use of the respective military Service's Categorical Exclusions (CATEXs) for minor actions occurring on host installations or ranges.

As a DoD agency, the MDA does not own real property. Because most MDA actions typically occur on host military service installations or ranges, or other Federal agency properties, MDA has historically relied upon our host installation or Federal agency's NEPA implementation, including their implementing procedures and CATEXs, to address the environmental impacts of MDA actions.

With the issuance of CEQ guidance "Establishing, Applying, and Revising Categorical Exclusions under the National Environmental Policy Act" (2010) and after consulting informally with the CEQ, MDA determined the need to establish NEPA implementing procedures and CATEXs specific to MDA projects and actions. The information that MDA assembled while developing our CATEXs is described in the "Administrative Record for Missile Defense Agency Proposed Categorical Exclusions" and is available on the MDA Web site at: <http://www.mda.mil/news/environmental-reports.html>.

MDA's CATEXs describe the categories of actions that the Agency determined will not normally have a potential significant effect, individually or cumulatively on the human environment; and together with these implementing procedures will guide MDA organizations in carrying out the procedural requirements of NEPA.

The text of the complete final Guidance document appears below.

Dated: August 4, 2014.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

The National Environmental Policy Act Procedures for the Missile Defense Agency

1. Purpose

These procedures implement the provisions of the NEPA, 42 U.S.C. 4321 *et seq.* They adopt and supplement the CEQ regulations implementing NEPA, 40 CFR parts 1500–1508, by establishing policy, directing environmental planning, and assigning responsibilities in the MDA to prepare, review, and approve environmental documents that comply with NEPA.

2. Scope

The policies and responsibilities in these procedures apply to activities conducted by MDA and its executing agents in the United States, its possessions, and territories. The potential environmental effects of MDA proposed activities in foreign countries and global commons will be considered in accordance with Executive Order 12114, "Environmental Effects Abroad of Major Federal Activities." DoD directives, host nation final governing standards, overseas environmental baseline guidance documents, status of forces agreements, and other international agreements.

3. Policy

(a) It is MDA policy regarding NEPA, consistent with our mission and regulations and the environmental laws and regulations of the United States, to: (1) Start the NEPA process at the earliest possible time as an effective decision-

making tool while evaluating a proposed action; (2) develop and carefully consider a range of reasonable alternatives to achieve the proposed actions; (3) write environmental analyses in plain English; and (4) to the maximum extent practical: (i) include pollution prevention alternatives, (ii) consider sustainable transportation, greenhouse gas emissions, and energy choices, and (iii) ensure that, consistent with other national policies and national security requirements, we use practical means and measures to protect, restore, and enhance the quality of the environment and mitigate adverse consequences. MDA lacks projects or programs where actions are planned by private applicants or other non-Federal entities. Therefore, these procedures do not include the provision (as specified at 40 CFR § 1501.2(d)) to account for actions planned by private applicants or other non-Federal entities.

(b) MDA will promote efficiency in its NEPA process through: (1) Being aware and involved with the MDA project advocate (or MDA proponent) in the NEPA process; (2) using programmatic analyses and "tiering," where appropriate, to make sure that decisions are made at the right levels, eliminating repetitive discussion, considering cumulative effects, and focusing on issues that are important and appropriate for discussion at each level; (3) using scoping and public involvement processes to ensure the analysis of issues of interest to the public and/or important to decision making; (4) eliminating needless paperwork by focusing documents on the major environmental issues affecting those decisions, including the use of adoption or incorporation by reference of previous, relevant NEPA analyses prepared by other agencies; (5) early integration of the NEPA process into all aspects of MDA planning to prevent disruption in decision making; (6) partnering or coordinating with agencies, organizations, and individuals whose specialized expertise improves the NEPA process; (7) clear and concise communication of data, documentation, and information; and (8) execution of the NEPA compliance process within the framework of the MDA's Environmental Management System.

(c) MDA will periodically (at least every seven years) review the effectiveness of its NEPA program and these implementing procedures, the appropriateness and usefulness of our categorical exclusions (CATEXs), the accuracy of predicted findings of no significant impact, the effectiveness of mitigation, the ramifications of actions both individually and cumulatively, and

public comments as well as any comments made by Federal, State, local, and tribal agencies. Requirements for the EIS are addressed later in these procedures.

7. CATEX

(a) If the proposed action qualifies as a CATEX and the screening criteria are met, the action can proceed. Appendix B lists MDA's CATEXs. Appendix C shows an MDA REC form to be used to document designated CATEXs.

(b) MDA may use a CATEX only when the following screening criteria are met: (1) The proposed action is a Federal action over which we have primary responsibility and, as described in its entirety, is covered by one or more CATEXs listed in Appendix B; (2) the proposed action does not involve any of the extraordinary circumstances described in paragraph (d) below; and (3) the proposed action does not involve using unproven technology that could potentially result in unknown impacts.

(c) Applying a CATEX to an action does not eliminate the need to meet other statutory or regulatory requirements including general conformity, federally-listed threatened or endangered species or their designated critical habitat, historic and cultural preservation, and safe drinking water requirements or other applicable Federal, state, or local regulatory requirements.

(d) "Extraordinary circumstances" arise when a typically categorically-excluded action has the reasonable likelihood to result in individually or cumulatively significant impacts on public health, safety, or the environment, based on the specific situation where the CATEX is applied. Extraordinary circumstances that preclude using a CATEX include: (1) A reasonable likelihood the proposed action would result in uncertain, unique, or unknown environmental risks, or is scientifically controversial; (2) a reasonable likelihood the proposed action would establish precedents or commit MDA to future actions with potential for significant impacts; (3) a reasonable likelihood the proposed action would threaten to violate Federal, state, or local environmental laws; (4) a reasonable likelihood the proposed action would adversely affect environmentally sensitive resources, such as, but not limited to, Federally-listed threatened and endangered species, their designated critical habitat, wilderness areas, floodplains, wetlands, aquifer recharge areas, coastal zones, wild and scenic rivers, and significant fish or wildlife habitat, unless the impact was permitted, mitigated, or

addressed through another environmental review process, for example, the Clean Water Act or Coastal Zone Management Act; (5) a reasonable likelihood the proposed action would adversely affect known national natural landmarks, or cultural or historic resources, including, but not limited to, property listed on or eligible for the National Register of Historic Places, unless the impact was permitted, mitigated, or addressed through another environmental review process, such as the National Historic Preservation Act; or (6) a reasonable likelihood of causing an increase in surface transportation congestion that would exceed capacity of the supporting infrastructure or otherwise cause significant impacts to the human environment.

(e) MDA will review its CATEXs at least every seven years to determine whether modifications, additions, or deletions are appropriate, based on our experience and determination that environmental impacts of certain activities are not significant. If MDA acquires new responsibilities through legislation or administrative restructuring, we may propose new or modified CATEXs after gaining sufficient experience with the new activities to make a reasoned determination that any resulting environmental impacts are not significant. MDA will submit recommendations for modifications, additions, or deletions to CEQ for informal consultation and discussion.

8. Environmental Assessment (EA)

(a) An EA is a concise public document agencies/services prepare to inform decision makers and determine if the proposed action has the potential to significantly impact the environment (which then would require the preparation of an EIS). In cases when no potentially significant impact is expected, an agency/service documents this determination with a FONSI. An EA may be prepared at any time to help agencies/services plan and make decisions. Typical MDA actions normally requiring an EA include: (1) New construction of facilities that involves more than five cumulative acres of new surface disturbance; (2) proposed actions that potentially result in significant changes to established land use; or (3) actions substantially altering ongoing MDA operations which could potentially lead directly, indirectly, or cumulatively to substantial environmental impacts.

(b) An EA is prepared to assess the extent of potential environmental impacts resulting from a proposed action and alternatives, and to

determine whether or not the impacts are likely to be significant. The EA must include, at a minimum, the following information and analyses: (1) Purpose and need for the proposed action or activity; (2) description of the proposed action; (3) brief discussion of the alternatives considered, including the "no action" alternative and the "proposed action;" (4) brief discussion of the affected environment and region of influence; (5) analysis of the potential environmental impacts of the proposed action and alternatives; (6) list of preparers, agencies and persons consulted; and (7) references.

(c) The analysis of potential environmental impacts (item (b)(5) above) includes an assessment of the direct, indirect, and cumulative impacts that can reasonably be expected from taking the proposed action or reasonable alternatives. When there are direct or indirect effects on an aspect of the environment from the proposed action, then MDA must also consider cumulative effects. Cumulative effects are impacts on the environment resulting from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions. Actions by Federal agencies, non-Federal agencies and private parties must be included when considering cumulative effects, as specified in 40 CFR 1508.7.

(d) The analysis for an EA leads to a determination to either issue a FONSI or a NOI to prepare an EIS.

(e) MDA should coordinate preparing the EA with other agencies (e.g., Federal, state, local, or tribal governments) when the action involves resources they manage or protect. MDA may invite agencies with jurisdiction by law and with special expertise, to participate as cooperating agencies (40 CFR 1501.6, 1508.5, 1508.15, and 1508.26). Factors for determining whether to invite, decline, or end cooperating agency status are in Attachment 1 of the CEQ Memorandum for Heads of Federal Agencies: Cooperating Agencies in Implementing the Procedural Requirements of the National Environmental Policy Act (January 30, 2002).

(f) MDA may request public involvement in preparing the EA or revising or supplementing the EA, or choose to involve the public after the EA is prepared. MDA may use scoping but, would not publish the notice in the FR unless the proposed action was of national interest. MDA will select the type and format for public involvement to best support on-time and meaningful public input and coordinate it with the

electronically with the EPA (40 CFR 1506.9).

11. Record of Decision (ROD)

(a) After filing the FEIS with the EPA, a ROD will be prepared (as specified in 40 CFR 1505.2) unless MDA announces that we are withdrawing the proposed action.

(b) MDA will make the ROD available on the MDA public Web site. MDA will also make the ROD available to the public through the various methods outlined in 40 CFR 1506.6, as appropriate.

(c) An action for which an EIS was approved will not start until: (1) 30 days after the EPA-issued notice of availability (NOA) that the final EIS was published in the FR; or (2) 90 days after the DEIS NOA was published in the FR by the EPA, whichever provides the public with the most notice.

12. Memorandum for Record (MFR)

When MDA reviews actions covered in an existing EA or EIS that we prepared, we may write a memorandum for record (MFR) to document that review. When MDA is a cooperating agency in preparing an EIS, we may adopt the lead agency's EIS without recirculating the EIS as a draft or as a final EIS. MDA may do this when, after an independent review, we conclude and document in an MFR that the lead agency adequately addressed the adopting agency's comments and suggestions. Similarly, when MDA is a cooperating agency in preparing an EA, we may adopt the EA without recirculating the EA when, after an independent review, we conclude and document in an MFR that the lead agency adequately addressed the adopting agency's comments and suggestions (CEQ Guidance Memorandum for Heads of Federal Department and Agencies: Improving the Process for Preparing Efficient and Timely Environmental Reviews under the National Environmental Policy Act, March 6, 2012; 40 CFR 1506.3).

13. Administrative Record

MDA must maintain the administrative record for the environmental analysis performed. The administrative record must be retained by MDA for seven years after completing the action, unless the action involves controversy concerning environmental effects or is of a nature that warrants keeping it longer. The administrative record includes all supporting documents and information used to make the decision. This administrative record should include, but is not limited to: (1) Maps and or

documents relevant to developing an EA or EIS; (2) formal communication by a consulting or coordinating agency office; (3) studies and inventories of affected environmental resources; (4) correspondence with regulatory agencies; (5) correspondence with and comments from, private citizens, tribes, local governments, and other individuals and agencies contacted during public involvement; and (6) confirmation of publications and transcripts of any public hearing. MDA will prepare and maintain an index or table of contents for the administrative record.

14. Mitigation and Monitoring

(a) MDA will indicate whether mitigation measures (as described in 40 CFR 1508.20) will be implemented for the alternative selected in either the FONSI or ROD, what commitments MDA considered and selected, and who will be responsible for implementing, funding, and monitoring the mitigation measures.

(b) Where possible and appropriate because of amount, MDA will include the cost of mitigation as a line item in the budget for a proposed project. Upon request, MDA will also make the results of mitigation monitoring available to the public.

(c) MDA may "mitigate to insignificance" potentially significant environmental impacts found during preparation of an EA, instead of preparing an EIS. The FONSI for the EA will include these mitigation measures, which will be carried out as the project is implemented. If, for any reason, MDA later abandons or does not meet the mitigation commitments upon which the FONSI relied, we will prepare a supplemental environmental document before continuing the project. If potentially significant environmental impacts might result from any project revisions, MDA will prepare an EIS if we used an EA for the decision to proceed, or we will prepare a supplemental EIS, if we used an EIS for the decision to proceed.

15. Supplemental EAs or EISs

(a) MDA will prepare a supplement to an EA or EIS in accordance with 40 CFR 1502.9(c), when there are substantial or significant new circumstances or information related to the proposed action, or to the environmental concerns of the proposed actions, which bear on the proposed action or its impacts. MDA may also prepare a supplement when the purposes of NEPA will be furthered by doing so.

(b) MDA prepares supplemental documents following the same general

process as the original EA or EIS. No new scoping is required for a supplemental EIS; however, we may choose to conduct scoping (40 CFR 1502.9(c)(4)).

(c) When a supplemental EA or EIS is prepared, MDA will issue a new FONSI or ROD as appropriate.

16. Cooperating Agencies

When MDA is the lead agency (40 CFR 1501.5), we will invite Federal agencies with jurisdiction by law to serve as cooperating agencies. MDA may invite Federal, tribal, state and local agencies with special expertise to serve as cooperating agencies. The roles of lead and cooperating agencies are found in 40 CFR 1501.5, 1501.6, and 1508.5, and the definitions of jurisdiction by law and special expertise are found at 40 CFR 1508.15 and 1508.5.

17. Adoption of EA or EIS

The MDA may adopt an EA or EIS, or portion thereof, prepared by another agency where the MDA proposed action is substantially the same as the action described in the EA, in accordance with CEQ Guidance Memorandum for Heads of Federal Departments and Agencies: Improving the Process for Preparing Efficient and Timely Environmental Reviews under the National Environmental Policy Act, March 6, 2012, or EIS, in accordance with 40 CFR 1506.3(b). MDA will independently review the EA or EIS and determine whether it is current, satisfies the requirements of NEPA, and covers the proposed action. If the actions covered by the original NEPA analysis and the MDA proposed action are substantially the same, and MDA was not a cooperating agency, then we will reissue the EA or EIS as a final document and prepare its own FONSI or ROD, as appropriate.

18. Incorporation by Reference

MDA will incorporate material by reference to reduce paperwork and bulk. MDA will incorporate previous NEPA analyses or relevant material in an EA or EIS by citing and briefly describing the material, and ensuring that any material incorporated by reference will be made reasonably available for inspection by potentially interested persons within the time allowed for comment either in the EA, EIS, or on our Web site as specified in 40 CFR 1502.21.

19. Tiering

MDA will use tiered environmental documents to eliminate repetitive discussions of the same issues and to focus on those issues relating to specific

use of the building, will not cause a substantial increase in waste discharged to the environment, will not result in substantially different waste discharges from current or previous activities, and emissions will remain within established permit limits, if any.

B-13. Acquisition, installation, modification, routine repair and replacement, and operation of utility (e.g., water, sewer, and electrical) and communication systems, mobile antennas, data processing cable and similar electronic equipment that use existing rights-of-way, easements, distribution systems, facilities, or previously disturbed land (REC required).

B-14. Acquisition, installation or minor relocation, operation and maintenance, or evaluation of physical security devices or controls to protect human or animal life and to enhance the physical security of existing critical assets in compliance with applicable Federal, tribal, state and local requirements to protect the environment. Examples include, but are not limited to:

- a. Motion detection systems.
- b. Raptor electrocution prevention devices.
- c. Lighting.
- d. Remote video surveillance systems.
- e. Access controls.
- f. Physical barriers, fences, grating, on or adjacent to existing facilities (REC required).

B-15. Maintenance of archaeological, historical, and endangered or threatened species avoidance markers, fencing, and signs.

B-16. Road or trail construction and repair on existing rights-of-ways or in previously disturbed areas which do not result in a change in functional use. Runoff, erosion, and sedimentation are controlled through implementation of best management practices (REC required).

B-17. Routine repair and maintenance of buildings, vessels, aircraft, grounds, and other facilities and equipment which do not result in a change in functional use or a significant impact on a historically significant element or setting. Examples include, but are not limited to: Repair of roofs, doors, windows, or fixtures, localized pest management, and minor erosion control measures.

B-18. New construction or equipment installation or alterations (interior and exterior) to or construction of an addition to an existing structure that is similar to existing land use if the area to be disturbed has no more than 5.0 cumulative acres of new surface disturbance. The following conditions must be met:

- a. The structure and proposed use are compatible with applicable Federal, tribal, state, and local planning and zoning standards.
- b. The site and scale of construction or improvement is consistent with those of existing, adjacent, or nearby buildings.
- c. The construction or improvement will not result in uses that exceed existing support infrastructure capacities (roads, sewer, water, parking, etc.).

This does not include construction of facilities for the transportation, distribution, use, storage, treatment, and disposal of solid waste or hazardous waste (REC required).

B-19. Demolition of non-historic buildings, structures, or other improvements and repairs that result in disposal of debris therefrom, or removal of a part thereof for disposal, in accordance with applicable regulations, including those regulations applying to removal of ACM, PCBs, LBP, and other special hazard items (REC required).

B-20. Research, testing, and operations conducted at existing facilities and plants or laboratories (including contractor-operated laboratories and plants) and in compliance with all applicable safety, environmental, and natural conservation laws. Examples include, but are not limited to: Wind tunnels, high-energy lasers, remote-sensing instruments, vacuum chambers, high-altitude simulator facilities, and propellant testing facilities.

B-21. Routine installation and use of radars, telemetry systems, communications equipment, and other essentially similar facilities and equipment within a launch facility, mobile platform, military installation, training area, or previously disturbed area that conform to current American National Standards Institute/Institute of Electrical and Electronics Engineers (ANSI/IEEE) guidelines for maximum permissible exposure to electromagnetic fields (REC required).

BILLING CODE 5001-06-P

Attachment 1
MDA Environmental Screening

A CATEX excludes a proposed action from further NEPA analysis. Do not use a CATEX if any of the following conditions are YES or UNKNOWN:

YES	NO	UNKNOWN	Description of the Reasonable Likelihood of the Proposed Action's Effect
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	1. Significant impact on public health or safety?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	2. Imposes uncertain, unique, or unknown environmental risks, or is scientifically controversial?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	3. Establishes precedents or makes decisions in principle for future actions that have the potential for significant impacts?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	4. Threatens a violation of Federal, state, or local environmental laws?
			5. Involves an action that, as determined in coordination with the appropriate resource agency, may:
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	a) Have an adverse effect on Federally listed endangered/threatened species or marine mammals or their designated critical habitat?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	b) Have an adverse effect on coral reefs or Federally designated wilderness areas, wildlife refuges, marine sanctuaries, or parklands?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	c) Adversely affect the size, function, or biological value of wetlands and is not covered by a nationwide or regional permit?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	d) Have an adverse effect on archaeological resources or resources (including but not limited to ships, aircraft, vessels, and equipment) listed or determined eligible for listing on the National Register of Historic Places?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	e) Result in an uncontrolled or unpermitted release of hazardous substances or require a conformity determination under standards of the Clean Air Act General Conformity Rule?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	f) Have an adverse effect on water resources such as quality, quantity, floodplains, buffer zones, surface water, or ground water?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	6. Impacts other resources not addressed above (i.e., Installation Resource Program, soils, geology, hazardous material/waste, or land use)?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	7. Causes an increase in transportation congestion that will exceed capacity of the supporting infrastructure?

ENCLOSURE 2

1. **Title:** Defense Threat Reduction Agency National Environmental Policy Act Implementation Procedures

2. **Type of Document:** Significant Guidance

3. **Description:** These procedures implement the National Environmental Policy Act (NEPA) and adopt and supplement the Council on Environmental Quality regulations that implement NEPA by establishing policy, directing environmental planning, and assigning responsibilities in the Defense Threat Reduction Agency to prepare, review, and approve environmental documents that comply with NEPA.

4. **Date of Issuance:** September 6, 2016

5. **Issuing agency, component, office, or program:** Department of Defense, Office of the Under Secretary of Defense for Acquisition, Technology, and Logistics, Defense Threat Reduction Agency

6. **An indication of whether:**

- a. The guidance was considered significant? YES
- b. The agency submitted guidance for review by Office of Information and Regulatory Affairs? YES
 - i. The title of the guidance used in the submission: Defense Threat Reduction Agency National Environmental Policy Act Implementation Procedures
 - ii. The date Submitted: January 5, 2016
- c. The agency submitted the guidance to Congress and GAO? NO
 - i. The title of the guidance used in the submission: N/A
 - ii. The date submitted: N/A
- d. The Regulatory Reform Task Force review of the guidance document, and results of review: The DoD Task Force reviewed this guidance on September 14, 2017, and recommended it be retained.

7. **To the extent applicable:**

- a. Federal Register citation: 81 FR 61200
- b. Hyperlink to copy of document:
<https://www.gpo.gov/fdsys/pkg/FR-2016-09-06/pdf/2016-21294.pdf>
- c. Regulation Identification Number: None
- d. Any other identification number: [Docket ID: DOD-2016-OS-0056]

Defense Threat Reduction Agency/ USSTRATCOM Center for Combating Weapons of Mass Destruction NEPA Implementing Procedures

1. Purpose

Pursuant to DTRA/SCC-WMD Instruction 4715.5, "Environmental Compliance" (Aug. 22, 2014), this guide identifies requirements and provides procedures for implementing the provisions of the National Environmental Policy Act (NEPA) in accordance with Council on Environmental Quality Regulations for Implementing the Procedural Provisions of the National Environmental Policy Act, 40 CFR parts 1500–1508, and E.O. 12114, "Environmental Effects Abroad of Major Federal Actions" (Jan. 4, 1979). It supplements 40 CFR parts 1500–1508 and E.O. 12114 by establishing policy, responsibilities, and procedures for fully considering environmental consequences of proposed actions, preparing necessary documentation for actions with the potential for significant environmental impact, and demonstrating transparency in decision-making.

DTRA/SCC-WMD does not own real property or undertake projects or programs where actions are planned or funded by private applicants or other non-Federal entities. Therefore, this guide does not include provisions to account for such actions.

2. Applicability

The requirements and procedures of this guide apply to all entities of DTRA/SCC-WMD and its executing agents.

3. Policy

It is DTRA/SCC-WMD policy to:

(a) Integrate environmental consideration into all Agency/Center activities at the earliest possible planning stage, make decisions considering environmental consequences, assess a range of reasonable alternative actions, and take actions that protect, restore, and enhance the environment.

(b) Prepare all necessary documentation required under NEPA and 40 CFR parts 1500–1508 whenever acting as the proponent or lead agency for a proposed action that has the potential for significant environmental impact.

(c) Serve as a cooperating agency for activities in which DTRA/SCC-WMD participates but is not the proponent or lead agency and provide full cooperation and necessary technical expertise and documentation to the lead agency as requested.

(d) Use programmatic and tiered analyses, when possible, to eliminate redundancies in future project/program analyses, effectively evaluate cumulative environmental effects, and reduce mission delays.

(e) Periodically (at least every 7 years) review the effectiveness of its NEPA procedures including responsibilities, implementing procedures, and categorical exclusions (CATEXs), and when new information or circumstances warrant, review the currency of existing Programmatic Environmental Impact Statements (EISs) and Programmatic Environmental Assessments (EAs).

(f) Involve the public in preparing and executing its NEPA procedures, and publish NEPA implementing procedures, CATEXs, and other relevant NEPA documentation as appropriate on the DTRA/SCC-WMD public Web site.

(g) Prepare NEPA documentation and procedures that are written in plain language so that decision-makers and the public can readily understand them.

(h) To the fullest extent possible, integrate NEPA requirements with other environmental review and consultation requirements including, but not limited to, Clean Water Act, Clean Air Act, Endangered Species Act, National Historic Preservation Act, Resource Conservation and Recovery Act, and Comprehensive Environmental Response, Compensation, and Liability Act.

(i) Eliminate duplication with State and local procedures by providing for, as appropriate, joint planning processes and, where appropriate, joint preparation of NEPA reviews (analyses and documentation).

(j) Eliminate duplication with other Federal procedures by jointly preparing NEPA reviews, or adopting other agencies' EAs and EISs, or incorporating by reference material into an EA or EIS where appropriate.

(k) Comply with host installation NEPA requirements in addition to the requirements set forth in this guide. Equivalent host installation documentation may be used to satisfy

DTRA/SCC-WMD documentation requirements.

4. Responsibilities

(a) Director, DTRA/SCC-WMD (J0)

The J0 has final approval and signature authority of EIS Records of Decision (RODs) generated by DTRA/SCC-WMD or its contractors. This authority may be delegated as deemed appropriate by the J0.

(b) Joint Director (JDIR), Acquisition, Finance, and Logistics (J4/8)

The JDIR, J4/8 monitors the effective implementation of these procedures through the Director, Environment, Safety, and Occupational Health (ESOH) Department (J4E) and hereby appoints the Director, J4E as the principal Agency/Center advisor on NEPA-related requirements.

(c) Director, J4E

The Director, J4E as the principal Agency advisor on NEPA-related requirements:

(1) Provides guidance to Project/Program Managers as necessary on the requirements in this guide and maintains direct oversight of the NEPA process.

(2) Reviews project proposals to determine NEPA applicability and requirements, and provides qualified personnel to support Project/Program Managers with NEPA compliance.

(3) Performs environmental compliance reviews of EISs/RODs, EAs/Findings of No Significant Impact (FONSI)s, and Records of Environmental Consideration (RECs) generated by DTRA/SCC-WMD or its contractors and provides initial approval by signature as the compliance authority.

(4) When DTRA/SCC-WMD serves as a cooperating agency for activities in which it participates but is not the proponent or lead, reviews and approves NEPA documents as requested by the lead agency.

(5) Maintains an organized administrative record of all NEPA documents generated by DTRA/SCC-WMD or its contractors, including documentation supporting Agency/Center CATEXs.

(6) Represents DTRA/SCC-WMD in NEPA-related matters with external organizations.

(7) Ensures required NEPA mitigation measures are documented in the administrative record, performed, and monitored.

to the proposed action and no action when there are no unresolved conflicts concerning alternative uses of available resources. For alternatives considered but eliminated from further study, the EA should briefly explain why these were eliminated. (v) Description of the affected environment. (vi) Analysis of the potential environmental impacts of the proposed action and alternatives. The EA must discuss, in comparative form, the reasonably foreseeable environmental impacts of the proposed action, the no action alternative, and any other reasonable alternatives necessary to address unresolved conflicts concerning the alternative use of resources. The discussion of environmental impacts must focus on substantive issues and provide sufficient evidence and analysis to support a FONSI unless a determination to prepare an EIS is made. (vii) Identification of any permits, licenses, approvals, reviews, or applicable special purpose laws. Although the NEPA process does not preclude separate compliance with these other requirements, DTRA/SCC-WMD will integrate applicable environmental review, consultation, and public involvement requirements under special purpose laws and requirements into its NEPA planning and documentation to reduce paperwork and delay. (viii) List of preparers, agencies, and persons consulted. (ix) Signature of the preparer(s) and the Director, J4E. (x) References and appendices. The appendices may include: (A) References that support statements and conclusions in the body of the EA, including methodologies used. Proper citations and, when available, hyperlinks to reference materials should be provided; (B) Evidence of coordination or required consultation with affected Federal, state, tribal, and local officials and copies or a summary of their comments or recommendations and the responses to such comments and recommendations; and (C) A summary of public involvement, including a summary of issues raised at any public hearing or public meeting.

(3) The analysis of potential environmental impacts (item (c)(2)(vi) above) will include an assessment of the direct, indirect, and cumulative impacts that can reasonably be expected from taking the proposed action or alternatives, and the analysis should address substantive comments raised by interested Federal agencies, non-Federal agencies, and private parties. (i) When direct or indirect impacts exist, the EA must consider cumulative impacts. Cumulative impacts are impacts on the

environment resulting from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions. (ii) Actions by Federal agencies, non-Federal agencies, and private parties must be included when considering cumulative impacts.

(4) DTRA/SCC-WMD must coordinate, as appropriate, preparation of the EA with other agencies (Federal, state, local, or tribal governments) when the action involves resources they manage or protect, and will invite agencies with jurisdiction by law or with special expertise to participate as cooperating agencies. (i) Agencies with jurisdiction by law are those with the authority to grant permits for implementing actions, approve or veto portions of the proposed action, or finance a portion of the proposed action. Federal agencies with jurisdiction by law must be a cooperating agency. Non-Federal agencies may be invited. (ii) Agencies with special expertise are those that have the expertise needed to help meet a statutory responsibility, to carry out in part the DTRA/SCC-WMD mission, or in the proposed actions' relationship to the objectives of regional, state, or local land use plans, policies, and controls. Federal and non-Federal agencies may be invited.

(5) DTRA/SCC-WMD must involve the public, to the extent practicable, in preparing EAs. (i) The appropriate level of involvement will vary based on the proposed action. A public scoping meeting, as described in 40 CFR 1501.7, is not required for an EA but is optional. Scoping can be particularly useful when an EA deals with uncertainty or controversy regarding potential conflicts over the use of resources or the environmental impacts of the proposed actions. The scoping process can provide a transparent way to identify environmental issues, focusing the analysis on the most pertinent issues and impacts. (ii) A draft EA should be circulated for 30 days of public comment and, if applicable, with the unsigned proposed FONSI, per paragraph (d)(7) of the FONSI provisions below. The length of comment period may be adjusted based on mission requirements.

(6) DTRA/SCC-WMD will use the conclusions of an EA to determine whether to issue a FONSI or an NOI to prepare an EIS (found in Appendix D).

(d) Finding of No Significant Impact (FONSI)

(1) A FONSI is a document that briefly presents the reasons why a proposed action will not have a significant effect on the human

environment and for which an EIS therefore will not be prepared. It must include the EA or a summary of it and note any other environmental documents related to it.

(2) Mitigated FONSI are appropriate where the J4E and Project/Program Manager, or other decision-maker for the project/program determine that mitigation measures can reduce potentially significant adverse impacts below the level of significance. These mitigation measures may be used to support a FONSI, provided that: (i) The relevant areas of environmental concern are identified in the EA; (ii) The EA supports the Agency's determination that the potential impacts, including the impacts of any mitigation commitments, will be insignificant; and (iii) The Agency has identified mitigation measures that will be sufficient to reduce potential impacts below applicable significance thresholds and has ensured commitments to implement these measures.

(3) Mitigation that is used to support a mitigated FONSI must be included as a condition of project approval. In these cases, if DTRA/SCC-WMD's decision to act is not otherwise evidenced by a final decision document such as a rule, license, or approval, the J4E and the Project Manager or other decision-maker for the project/program must document the decision in the conclusion of the FONSI. The decision must identify those mitigation measures DTRA/SCC-WMD is adopting and identify any monitoring and enforcement program applicable to such measures (see Section 6: Mitigation and Monitoring).

(4) A FONSI or Mitigated FONSI must document, in plain writing, the reasons why an action, not otherwise categorically excluded, would not have a significant impact on the human environment. The FONSI documents the basis for the determination that the proposed action would not have significant environmental impacts and the decision to implement the proposed action. The FONSI may be attached to an EA, or the EA and FONSI may be combined into a single document. If the FONSI is attached or combined with the EA, it need not repeat the discussion in the EA. If the FONSI is not attached or combined with the EA, the FONSI must include a summary of the EA and note any other environmental documents related to it. The FONSI must: (i) Briefly describe the proposed action, the purpose and need, and the alternatives considered (including the no action alternative), and assess and document all relevant matters necessary to support the conclusion that the proposed action would not significantly affect the

An executive summary that adequately and accurately summarizes the EIS. The summary describes the proposed action, stresses the major conclusions, areas of controversy (including issues raised by agencies and the public), and the issues to be resolved (including the choice among alternatives). It also discusses major environmental considerations and how these have been addressed, summarizes the analysis of alternatives, and identifies the agency preferred alternative. It discusses mitigation measures and any monitoring. (iii) A table of contents that lists the chapters and exhibits (including figures, maps, and tables) presented throughout the EIS. It will also list any appendices, acronym list, glossary, references, and index. (iv) A Purpose and Need section that briefly describes the underlying purpose and need for the Federal action. It presents the problem being addressed and describes what DTRA/SCC-WMD is trying to achieve with the proposed action. It provides the parameters for defining a reasonable range of alternatives to be considered. The purpose and need for the proposed action must be clearly explained and stated in terms that are understandable to individuals who are not familiar with DTRA/SCC-WMD activities. Where appropriate, the responsible DTRA/SCC-WMD official should initiate early coordination with cooperating agencies in developing purpose and need. (v) An Alternatives section that includes the proposed action. This section is the heart of the EIS. It presents a comparative analysis of the no action alternative, the proposed action, and other reasonable alternatives to fulfill the purpose and need for the action, to sharply define the issues, and provide a clear basis for choice among alternatives by the approving official. Whether a proposed alternative is reasonable depends, in large part, upon the extent to which it meets the purpose and need for the proposed action. Reasonable alternatives not within the jurisdiction of the lead agency should be considered. DTRA/SCC-WMD may include alternatives proposed by the public or another agency. However, they must meet the basic criteria for any alternative: It must be reasonable, feasible, and achieve the project's purpose. The extent of active participation in the NEPA process by the proponent of the alternative also bears on the extent to which a preferred alternative deserves consideration. Charts, graphs, and figures, if appropriate, may aid in understanding the alternatives. To provide a clear basis of choice among the alternatives,

graphic or tabular presentation of the comparative impact is recommended. This section also presents a brief discussion of alternatives that were not considered for detailed analysis (e.g., because they do not meet the purpose and need for the proposed action). The draft EIS must identify the preferred alternative or alternatives, if one or more exists at the time the draft EIS is issued. The final EIS must specifically and individually identify the preferred alternative. Criteria other than those included in the affected environment and environmental consequences sections of the EIS may be applied to identify the preferred alternative. Although CEQ encourages Federal agencies to identify the environmentally-preferred alternatives in the EIS, the CEQ Regulations do not require that discussion until the ROD. (vi) An affected environment section that describes the environmental conditions of the potentially affected geographic area or areas. The discussion of the affected environment should be no longer than is necessary. It should include detailed discussion of only those environmental impact categories affected by the proposed action or any reasonable alternatives to demonstrate the likely impacts; data and analyses should be presented in detail commensurate with the importance of the impact. To ensure that this section emphasizes the important aspects of the impacts on the environment, the discussion should summarize and incorporate by reference information or analysis that is reasonably available to the public. This section may include the following, if appropriate: (A) Location map, vicinity map, project layout plan, and photographs; (B) Existing and planned land uses and zoning, including: industrial and commercial growth characteristics in the affected vicinity; affected residential areas, schools, places of outdoor assemblies of persons, churches, and hospitals; public parks, wildlife and waterfowl refuges; federally listed or proposed candidate, threatened, or endangered species or federally designated or proposed critical habitat; wetlands; national and state forests; floodplains; farmlands; coastal zones, coastal barriers, or coral reefs; recreation areas; wilderness areas; wild and scenic rivers; Native American cultural sites, and historic and archeological sites eligible for or listed on the National Register of Historic Places; (C) State or local jurisdictions affected by the proposed action or any reasonable alternatives; (D) Population estimates and other relevant demographic information for the

affected environment, including a census map where appropriate; and (E) Past, present, and reasonably foreseeable future actions, whether Federal or non-Federal, including related or connected actions to show the cumulative effects of these actions on the affected environment. (vii) An environmental consequences section, which forms the scientific and analytical basis for comparing the proposed action, the no action alternative, and other alternatives retained for detailed analysis. (A) The discussion of environmental consequences will include the environmental impacts of the alternatives including the proposed action; any adverse environmental impacts that cannot be avoided should the proposed action or any of the reasonable alternatives be implemented; the relationship between short-term uses of man's environment and the maintenance and enhancement of long-term productivity; any irreversible or irretrievable commitments of resources that would be involved in the proposed action or any reasonable alternatives should they be implemented; and mitigation. It must include considerations of direct, indirect, and cumulative impacts and their significance and possible conflicts with the objectives of Federal, regional, state, tribal, and local land use plans, policies, and controls for the area concerned and other unresolved conflicts. To avoid excessive length, the environmental consequences section may incorporate by reference background data to support the impacts analysis. 40 CFR 1502.22 sets forth requirements for addressing situations in which information for assessing reasonably foreseeable significant adverse impacts is incomplete or unavailable. (B) Specific environmental impact categories must be discussed to the level of detail necessary to support the comparisons of impacts of each alternative retained for detailed analysis, including the no action alternative. The section should include the information required to demonstrate compliance with other applicable requirements and should identify any permits, licenses, other approvals, or reviews that apply to the proposed action or any reasonable alternatives, and indicate any known problems with obtaining them. This section should also provide the status of any interagency or intergovernmental consultation required, for example, under the National Historic Preservation Act, 16 U.S.C. 470–470x–6, the Endangered Species Act, 16 U.S.C. 1531–1544, the Coastal Zone

input or concern and documenting a response, update the EIS as necessary, and complete an ROD (found in Appendix F) or terminate the proposed action. (i) DTRA/SCC-WMD must take into consideration all comments received on the draft EIS and comments recorded during public meetings or hearings, and respond to the substantive comments in the final EIS. All substantive comments received on the draft EIS (or summaries where the comments are voluminous) must be attached to the final EIS. Comments must be responded to in one or more of the following ways: (A) Written into the text of the final EIS; (B) Stated in an errata sheet attached to the final EIS; or (C) Included or summarized and responded to in an attachment to the final EIS, and if voluminous, may be compiled in a separate supplemental volume for reference. (ii) DTRA/SCC-WMD may, subject to the conditions set forth below, attach errata sheets to the draft EIS. If the modifications to the draft EIS in response to comments are minor and are confined to factual corrections or explanations of why the comments do not warrant additional agency response, then only the comments, responses, and errata sheets need to be circulated and the draft EIS and errata sheets may be filed as the final EIS as set out in 40 CFR 1503.4(c). Use of errata sheets is subject to the condition that the errata sheets: (A) Cite the sources, authorities, or reasons that support the position of DTRA/SCC-WMD; and (B) If appropriate, indicate the circumstances that would trigger agency reappraisal or further response.

(9) The cover page or summary of the final EIS or a draft EIS with errata sheets in lieu of a final EIS must include the following declaration language below. After careful and thorough consideration of the information contained herein and following consideration of the views of those Federal agencies having jurisdiction by law or special expertise with respect to the environmental impacts described, the undersigned finds that the proposed Federal action is consistent with existing national environmental policies and objectives as set forth in Section 101(a) of the National Environmental Policy Act of 1969.

(10) Other required environmental findings and conclusions must be included in the summary, if not included in the body or at the end of the EIS.

(11) The final EIS must be reviewed and approved by the Project/Program Manager and the J4E prior to generating an ROD.

(12) The J4E will file the final EIS with the EPA through the e-NEPA electronic filing system at: <http://www.epa.gov/eoearth/nepa/submit/eis/index.html>. The EPA will issue an NOA for the final EIS in the FR. The Project/Program Manager may request that the JOXC also publish a more detailed availability notice in the FR, but the DTRA/SCC-WMD notice cannot be substituted for the EPA FR notice. The final EIS must be sent to: (i) The appropriate regional office of EPA; (ii) Any relevant DoD officials; (iii) Each Federal, state, and local agency, tribe, and private organization that made substantive comments on the draft EIS and to individuals who requested a copy of the final EIS or who made substantive comments on the draft EIS (one copy each); (iv) DOE headquarters for projects having major energy-related consequences (one copy); and (v) The appropriate state-designated single point of contact (or specific agency contacts when states have not designated a single contact point), unless otherwise designated by the governor (adequate number of copies, which varies by state). (vi) Additional copies must be sent to accessible locations to be made available to the general public such as state, metropolitan, and local public libraries to facilitate accessibility. The final EIS, comments received, and supporting documents must be made available to the public without charge to the fullest extent practical or at a reduced charge, which is not more than the actual cost of reproducing copies, at appropriate agency office(s) or at a designated location.

(13) DTRA/SCC-WMD must wait a minimum of 30 days after the EPA NOA of the final EIS is published in the FR (and at least 90 days after filing of the draft EIS) before making a decision on the proposed action and issuing an ROD. The 30-day period provides time for the decision-maker to consider the final EIS and other pertinent information and make a decision; it is not for receiving public comments unless DTRA/SCC-WMD requests comments on the final EIS. At the conclusion of the 30-day waiting period, the JO may issue the final decision in an ROD and implementation of the selected action may begin. (i) When DTRA/SCC-WMD is the lead Federal agency, the EPA, upon a showing by another Federal agency of compelling reasons of national policy, may extend prescribed periods up to 30 days, but no longer than 30 days without the permission of DTRA/SCC-WMD. The Project/Program Manager may also extend the waiting

period or request the EPA to reduce this period for compelling reasons of national policy. The 90-day waiting period after the NOA of the draft EIS cannot be altered by the EPA. (ii) If DTRA/SCC-WMD unilaterally approves an overall extension of a comment period, the EPA must be notified so that the EPA may provide an update in its FR notice.

(14) Under certain circumstances, DTRA/SCC-WMD may choose to terminate an EIS. This could occur, for example, when a proponent has decided not to go forward with the action or it is determined to be no longer needed. DTRA/SCC-WMD may also terminate an EIS and revert to an EA if the environmental analysis shows that there would not be significant impacts from the project. DTRA/SCC-WMD will provide notice of the determination to no longer conduct an EIS that is issued in a manner comparable to the publication and distribution used for the NOI to prepare the EIS. The notice should cite the date of the original NOI to prepare an EIS and state the reasons why DTRA/SCC-WMD has chosen to terminate the EIS.

(f) Record of Decision (ROD)

(1) The ROD (Appendix F) will state DTRA/SCC-WMD's final decision on which action will be taken. The ROD may be prepared after the time periods outlined in the EIS section above. The Project/Program Manager and the J4E must provide concurrence on the ROD before submitting to the JO for approval. Supplements to final EISs may be necessary (see Section (7)(b) Supplemental EAs/EISs) and must be reviewed and approved in the same manner as the original document, and a new draft ROD should be prepared, circulated, and approved. (i) DTRA/SCC-WMD may select any alternative within the range of alternatives analyzed in the final EIS. The selected alternative may be an alternative other than the agency's preferred alternative or the environmentally-preferred alternative. The selected action may not be implemented until the JO has approved and signed the ROD. (ii) If DTRA/SCC-WMD selects an alternative other than the preferred alternative in the final EIS that involves special purpose laws and requirements, such as those related to Section 4(f) land, federally listed endangered species, wetlands, or historic sites, the Agency must first complete any required permit, evaluation, consultation, or other approval requirement prior to taking the action.

(2) DTRA/SCC-WMD must provide public notice of availability of the ROD

(2) Significant information is information that paints a dramatically different picture of impacts compared to the description of impacts in the EA or EIS. DTRA/SCC-WMD may also prepare supplements when the purposes of NEPA will be furthered by doing so.

(3) Supplemental documents must be prepared following the same general process as the original EA or EIS addressing the new circumstances, information, or actions and incorporating by reference and summary the original EA or EIS. No new scoping is required for a supplemental EIS, but may be conducted at the discretion of the Project/Program Manager or the Director, J4E.

(4) When a supplemental EA or EIS is completed, a new FONSI or ROD must be issued and made available to the public.

(c) Adoption of EAs/EISs

(1) DTRA/SCC-WMD may adopt in whole or in part, another Federal agency's draft or final EA, the EA portion of another agency's EA/FONSI, or EIS in accordance with 40 CFR 1506.3 and CEQ Guidance, "Improving the Process for Preparing Efficient and Timely Environmental Reviews under the National Environmental Policy Act," March 6, 2012, where DTRA/SCC-WMD's proposed action is substantially the same as the action described in the existing EA or EIS. When another agency's NEPA document does not adequately address DTRA/SCC-WMD's proposed action or meet the applicable standards in the CEQ Regulations and these implementing procedures, then DTRA/SCC-WMD cannot adopt the EA or EIS and should consider which portions of that EA or EIS can be incorporated by reference.

(2) The Project/Program Manager and J4E will independently review the EA or EIS and determine whether it is current, satisfies the requirements of NEPA, and covers the proposed action. In adopting all or part of another agency's NEPA document, DTRA/SCC-WMD takes full responsibility for the scope and content that addresses the relevant DTRA/SCC-WMD action(s).

(3) If the actions covered by the original NEPA analysis and the DTRA/SCC-WMD proposed action are substantially the same, DTRA/SCC-WMD may reissue the EA or EIS as a final document and prepare its own FONSI or ROD. The EA or EIS will be recirculated and a public comment period will be provided per Section 5(e) above. When DTRA/SCC-WMD adopts an EA or EIS where it has acted as a cooperating agency and its comments and suggestions have been satisfied by

the lead agency in the original document, then coordination with the public is not required.

8. Actions on Host Installations/Actions Abroad

(a) Actions on Host Installations

DTRA/SCC-WMD must comply with the host installation NEPA implementing regulations, procedures, and guidance in addition to those set forth in this guide, and all environmental compliance actions must be coordinated with the appropriate host installation point of contact. Equivalent host installation documentation may be used to satisfy DTRA/SCC-WMD documentation requirements when signed and approved by DTRA/SCC-WMD and maintained in its administrative record.

(b) Actions Occurring Abroad

(1) Executive Order 12114 is based on the authority vested in the President by the Constitution and the laws of the United States. The objective of the Executive Order is to further foreign policy and national security interests while at the same time taking into consideration important environmental concerns. DTRA/SCC-WMD acts with care in the global commons because the stewardship of these areas is shared by all the nations of the world. DTRA/SCC-WMD will take account of environmental considerations when it acts in the global commons in accordance with these procedures.

(2) DTRA/SCC-WMD also acts with care within the jurisdiction of a foreign nation. Treaty obligations and the sovereignty of other nations must be respected, and restraint must be exercised in applying United States laws within foreign nations unless the Congress has expressly provided otherwise. DTRA/SCC-WMD will take account of environmental considerations in accordance with these procedures when it acts in a foreign nation.

(3) Foreign policy considerations require coordination with the Department of State on communications with foreign governments concerning environmental agreements and other formal arrangements with foreign governments concerning environmental matters. Informal working-level communications and arrangements are not included in this coordination requirement. Consultation with the Department of State also is required in connection with the utilization of additional exemptions from these procedures.

(4) Executive Order 12114, implemented by these procedures, prescribes the exclusive and complete procedural measures and other actions to be taken by DTRA/SCC-WMD to further the purpose of the National Environmental Policy Act with respect to the environment outside the United States. As such, actions with potential for significant environmental impact occurring abroad or in the global commons outside the jurisdiction of any nation (e.g., the ocean or Antarctica) are subject to the environmental analysis procedures set forth in this Guide with the exception of hosting public meetings. Project/Program Managers may choose to host public meetings in consideration of the following factors: (i) Foreign relations sensitivities. (ii) Whether the hearings would be an infringement or create the appearance of infringement on the sovereign responsibilities of another government. (iii) Requirements of domestic and foreign governmental confidentiality. (iv) Requirements of national security. (v) Whether meaningful information could be obtained through hearings. (vi) Time considerations. (vii) Requirements for commercial confidentiality.

(5) Consideration will be given to whether any foreign government should be informed of the availability of environmental documents. Communications with foreign governments concerning environmental agreements and other formal arrangements with foreign governments concerning environmental matters must be coordinated by the JOXG with the Department of State through the Assistant Secretary of Defense (International Security Affairs).

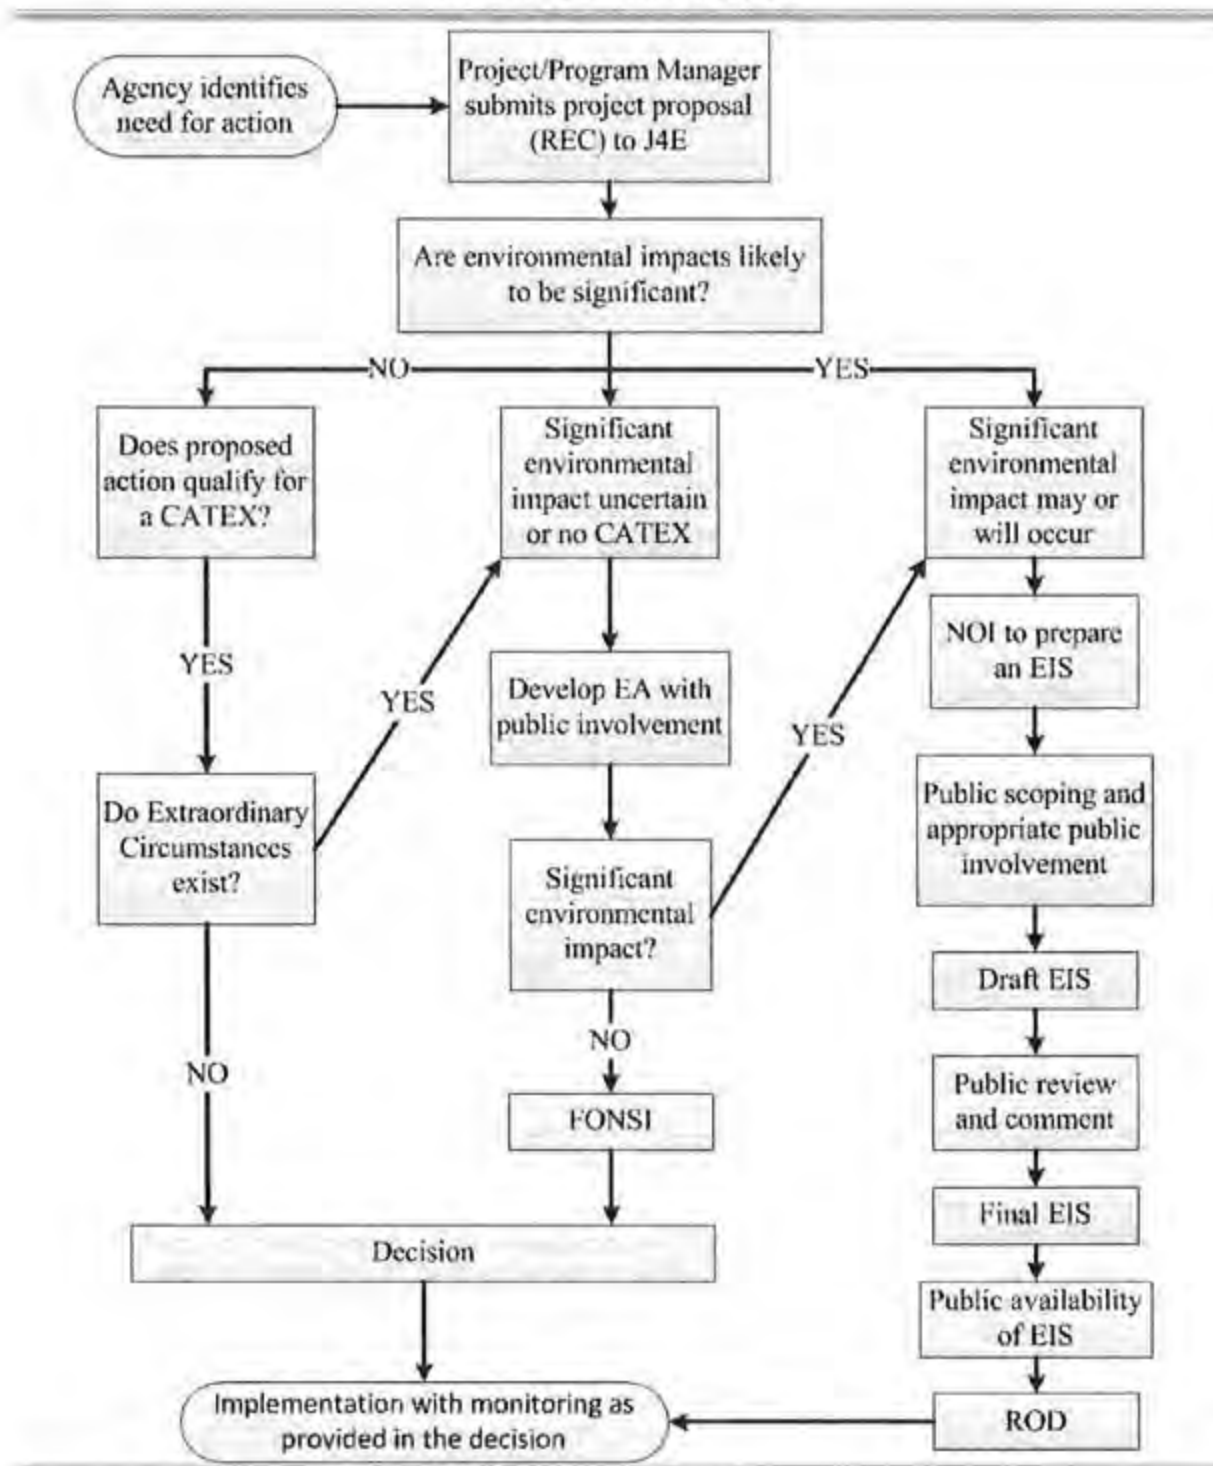

9. Classified Actions

(a) Classification of an action for national security does not relieve DTRA/SCC-WMD from the requirements of NEPA. DTRA/SCC-WMD will prepare, safeguard, and disseminate NEPA documents in accordance with DoD requirements for classified information.

(b) Classified information in NEPA documents will be written in a separate appendix from unclassified information so that the unclassified portions of the documents can be made available to the public.

(c) When classified information is an integral part of the analysis so that a meaningful unclassified NEPA analysis cannot be produced, the Project/Program Manager in coordination with the J4E will form a team to review the classified NEPA analysis. This team will include environmental professionals and subject matter experts who will

The NEPA Process

BILLING CODE 5001-06-C

Appendix B: Categorical Exclusions (CATEXS)

This Appendix includes categorical exclusions (CATEXS) and extraordinary

circumstances for DTRA/SCC-WMD activities.

Actions categorically excluded in the absence of extraordinary circumstances are:

1. Normal personnel, fiscal or budgeting, and administrative activities and decisions, including those involving military and

civilian personnel (for example, recruiting, processing, data collection, conducting surveys, payroll, and record keeping).

2. Preparing, revising, or adopting regulations, instructions, directives, or guidance documents, including those that implement without substantial change to the

eligible for listing on the National Register of Historic Places. c. Areas having special designation or recognition such as prime or unique agricultural lands; coastal zones; designated wilderness or wilderness study areas; wild and scenic rivers; National Historic Landmarks (designated by the Secretary of the Interior); floodplains; wetlands; sole source aquifers (potential sources of drinking water); National Wildlife Refuges; National Parks; areas of critical environmental concern; or other areas of high environmental sensitivity. d. Cultural, scientific or historic resources.

6. A reasonable likelihood of dividing or disrupting an established community or planned development, or is inconsistent with existing community goals or plans.

7. A reasonable likelihood of causing an increase in surface transportation congestion that will decrease the level of service below acceptable levels.

8. A reasonable likelihood of adversely impacting air quality or violating federal, state, local or tribal air quality standards under the Clean Air Act Amendments of 1990.

9. A reasonable likelihood of adversely impacting water quality, sole source aquifers, public water supply systems or state, local, or tribal water quality standards established under the Clean Water Act and the Safe Drinking Water Act.

10. A reasonable likelihood of effects on the quality of the environment that are highly controversial on environmental grounds. The term "controversial" means a substantial dispute exists as to the size, nature, or effect of the proposed action rather than to the existence of opposition to a proposed action, the effect of which is relatively undisputed.

11. A reasonable likelihood of a disproportionately high and adverse effect on low income or minority populations (see Executive Order 12898).

12. Limit access to and ceremonial use of Indian sacred sites on Federal lands by Indian religious practitioners or significantly adversely affect the physical integrity of such sacred sites (see Executive Order 13007).

13. Contribute to the introduction, continued existence, or spread of noxious weeds or non-native invasive species known to occur in the area or actions that may promote the introduction, growth, or expansion of the range of such species (Federal Noxious Weed Control Act and Executive Order 13112).

14. A greater scope or size than is normal for this category of action.

15. A reasonable likelihood of degrading already existing poor environmental conditions. Also, initiation of a degrading influence, activity, or effect in areas not already significantly modified from their natural condition.

16. A precedent (or makes decisions in principle) for future or subsequent actions that have a reasonable likelihood of having a future significant effect.

17. Introduction or employment of unproven technology.

18. A reasonable likelihood of (i) releases of petroleum, oils, and lubricants (except from a properly functioning engine or vehicle) or reportable releases of hazardous

or toxic substances as specified in 40 CFR part 302, Designation, Reportable Quantities, and Notification); (ii) application of pesticides and herbicides; (iii) or where the proposed action results in the requirement to develop or amend a Spill Prevention, Control, or Countermeasures Plan.

Appendix D: Notice of Intent (NOI)

DEFENSE THREAT REDUCTION AGENCY/
UNITED STATES STRATEGIC COMMAND
CENTER FOR COMBATING WEAPONS OF
MASS DESTRUCTION (DTRA/SCC-WMD)

[Name of Office; Location; Short Title or
Subject of the Notice]

ACTION: Notice of intent to prepare an
environmental impact statement.

SUMMARY: [Briefly describe the nature and
scope of the proposed action. Do not put

legal citations or background information in
the SUMMARY section; these belong in the
SUPPLEMENTARY INFORMATION section.]
DATES: Comments concerning the scope of
the analysis must be received by [insert date
30 days from date of publication in the
Federal Register].

The draft environmental impact statement
is expected [insert estimated month and year]
and the final environmental impact statement
is expected [insert estimated month and
year.]

ADDRESSES: Send written comments to
[insert address]. Comments may also be sent
via email to [insert email address], or via
facsimile to [insert fax number]. [In this
section, you also may put additional
addresses, locations of meetings, etc. Do not
put more than four addresses in this section.
If there are more than four pertinent
addresses, create a heading for them under
the SUPPLEMENTARY INFORMATION
section of the notice.]

It is important that reviewers provide their
comments at such times and in such a way
that they are useful to the Agency's
preparation of the EIS. Therefore, comments
should be provided prior to the close of the
comment period and should clearly articulate
the reviewer's concerns and contentions.

Comments received in response to this
solicitation, including names and addresses
of those who comment, will be part of the
public record for this proposed action.
Comments submitted anonymously will be
accepted and considered.

FOR FURTHER INFORMATION CONTACT:
[Insert name(s) and contact information you
wish to use, such as telephone number and
email address].

Individuals who use telecommunication
devices for the deaf (TDD) may call the
Federal Information Relay Service (FIRS) at
1-800-877-8339 between 8 a.m. and 8 p.m.
Eastern Time, Monday through Friday.

SUPPLEMENTARY INFORMATION:

Purpose and Need for Action

[Describe why DTRA/SCC-WMD is
proposing the action: Why here? Why now?]

Proposed Action

[Describe the proposed action. Consider
who, what, how, where, and when.]

Possible Alternatives

[Include only if any have been identified
(delete heading if not used or request input
on any alternatives considered reasonable—
including technically and economically
feasible—that will meet the purpose and
need).]

Lead and Cooperating Agencies

[Include only if there are other agencies to
list as joint lead agencies and/or cooperating
agencies (delete heading if not used).]

Responsible Official

[Provide the title and address of the
official(s) responsible for the proposed
action. Use of the responsible official's name
is optional.]

Nature of Decision To Be Made

[Describe the framework or scope of the
decision(s) to be made by the responsible
official(s).]

ENCLOSURE 3

1. **Title:** Guidance to Federal Financial Assistance Recipients Regarding Title VI Prohibition Against National Origin Discrimination Affecting Limited English Proficient Persons
2. **Type of Document:** Guidance
3. **Description:** Under Title VI of the Civil Rights Act of 1964 and various DoD regulations, recipients of federal financial assistance from DoD have a responsibility to ensure that individuals are not unlawfully discriminated against on the basis of race, color or national origin, which includes a requirement to provide for meaningful access by persons with limited English proficiency to their programs and activities. This guidance document, required by Executive Order 13166, clarifies that obligation.
4. **Date of Issuance:** December 31, 2013
5. **Issuing agency, component, office, or program:** Department of Defense, Office of the Under Secretary of Defense for Personnel and Readiness
6. **An indication of whether:**
 - a. The guidance was considered significant? NO
 - b. The agency submitted guidance for review by Office of Information and Regulatory Affairs? NO
 - i. The title of the guidance used in the submission: N/A
 - ii. The date Submitted: N/A
 - c. The agency submitted the guidance to Congress and GAO? NO
 - i. The title of the guidance used in the submission: N/A
 - ii. The date submitted: N/A
 - d. The Regulatory Reform Task Force review of the guidance document, and results of review: The DoD Task Force reviewed this guidance on November 9, 2017, and recommended it be retained.
7. **To the extent applicable:**
 - a. Federal Register citation: 78 FR 79675
 - b. Hyperlink to copy of document:

 - c. Regulation Identification Number: None
 - d. Any other identification number: None

SUPPLEMENTARY INFORMATION: Under Title VI of the Civil Rights Act of 1964, 42 U.S.C. § 2000d, et seq. (Title VI), and DoD regulations implementing Title VI, recipients of Federal financial assistance from DoD ("recipients") have a responsibility to ensure that individuals are not unlawfully discriminated against on the basis of race, color or national origin, which includes are requirement to provide for meaningful access by persons with limited English proficiency (LEP) to their programs and activities. See 32 CFR Part 195. Executive Order 13166, signed August 11, 2000 and published at 65 FR 50121 (August 16, 2000), directs each Federal agency that extends assistance subject to the requirements of Title VI to publish, after review and approval by the Department of Justice (DOJ), guidance for its recipients clarifying that obligation. The Executive Order also directs that all such guidance be consistent with the compliance standards and framework set forth by DOJ.

On March 14, 2002, the Office of Management and Budget (OMB) issued a Report to Congress titled "Assessment of the Total Benefits and Costs of Implementing Executive Order No. 13166: Improving Access to Services for Persons with Limited English Proficiency." Among other things, the Report recommended the adoption of uniform guidance across all Federal agencies, with flexibility to permit tailoring to each agency's specific recipients. Consistent with this OMB recommendation, the DOJ published LEP Guidance for DOJ recipients which was drafted and organized to also function as a model for similar guidance by other Federal grant agencies. See 67 FR 41455 (June 18, 2002). This final DoD Guidance is based upon of the model June 18, 2002, DOJ LEP Guidance for Recipients.

The primary focus of this Guidance is on entities that receive Federal financial assistance from DoD, either directly or indirectly, through a grant, cooperative agreement, contract or subcontract, and operate programs or activities or portions of programs or activities in the United States and its territories.

In connection with the issuance of this Guidance, each DoD component is encouraged to review their current programs and activities to determine whether they provide the type of external assistance to a recipient which is subject to Title VI. If Title VI is determined to be applicable to one or more program or activity, the administering component should consider developing a program-specific Appendix to this Guidance. The

Appendix should explain how the component's recipients may ensure meaningful linguistic access consistent with the principles and compliance standards set out in DoD's LEP Guidance for Recipients below. Any future Appendix must be submitted to DOJ for review and approval prior to publication in the **Federal Register**.

It has been determined that the Guidance does not constitute a regulation subject to the rulemaking requirements of the Administrative Procedures Act, 5 U.S.C. § 533. It has also been determined that this Guidance is not subject to the requirements of Executive Order 12866.

A. Response to Comments

DoD interim final guidance on DoD recipients' obligations to take reasonable steps to ensure access by LEP persons was published on February 15, 2012. See 77 FR 8828. The comment period was open until March 16, 2012. DoD received one comment representing one organization in response to its publication of draft guidance on DoD recipients' obligations to take reasonable steps to ensure access to programs and activities by LEP persons. The comment expressed concern about use of the disparate impact approach to enforce Title VI of the Civil Rights Act of 1964. DoD addresses this issue in section II, Legal Authority, of this guidance.

The text of the complete proposed Guidance document appears below.

Dated: December 24, 2013.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

I. Introduction

Most individuals living in the United States read, write, speak and understand English. There are many individuals, however, for whom English is not their primary language. For instance, based on the 2000 census, over 26 million individuals speak Spanish and almost 7 million individuals speak an Asian or Pacific Island language at home. If these individuals have a limited ability to read, write, speak, or understand English, they are limited English proficient, or "LEP." The 2000 census indicates that 28.1% of all Spanish-speakers, 28.2% of all speakers of Chinese languages, and 32.3% of all Vietnamese-speakers reported that they spoke English "not well" or "not at all."

Language for LEP individuals can be a barrier to accessing important benefits or services, understanding and exercising important rights, complying with applicable responsibilities, or understanding other information

provided by federally funded programs and activities. The Federal Government funds an array of services that can be made accessible to otherwise eligible LEP persons. The Federal Government is committed to improving the accessibility of these programs and activities to eligible LEP persons, a goal that reinforces its equally important commitment to promoting programs and activities designed to help individuals learn English. Recipients should not overlook the long-term positive impacts of incorporating or offering English as a Second Language (ESL) programs in parallel with language assistance services. ESL courses can serve as an important adjunct to a proper LEP plan. However, the fact that ESL classes are made available does not obviate the statutory and regulatory requirement to provide meaningful access for those who are not yet English proficient. Recipients of Federal financial assistance have an obligation to reduce language barriers that can preclude meaningful access by LEP persons to important government services.¹

This policy Guidance clarifies existing legal requirements for LEP persons by providing a description of the factors recipients should consider in fulfilling their responsibilities to LEP persons.² These are the same criteria DoD has been and will continue to use in evaluating whether recipients are in compliance with Title VI and Title VI regulations.

In certain circumstances, failure to ensure that LEP persons can effectively participate in or benefit from federally assisted programs and activities may violate the prohibition under Title VI of the Civil Rights Act of 1964, 42 U.S.C. 2000d, and Title VI regulations against national origin discrimination. The purpose of this policy Guidance is to assist recipients in fulfilling their responsibility to provide meaningful access to LEP persons under existing law.

¹ DoD recognizes that many recipients had language assistance programs in place prior to the issuance of Executive Order 13166. This Guidance provides a uniform framework for a recipient to integrate, formalize, and assess the continued vitality of these existing and possibly additional reasonable efforts based on the nature of its program or activity, the current needs of the LEP population it encounters, and its prior experience in providing language services to the community it serves.

² This policy guidance is not a regulation but rather a guide. Title VI and its implementing regulations require that recipients take responsible steps to ensure meaningful access by LEP persons. This Guidance provides an analytical framework that recipients may use to determine how best to comply with statutory and regulatory obligations to provide meaningful access to the benefits, services, information, and other important portions of their programs and activities for individuals who are limited English proficient.

land or property, details of Federal or Federally funded personnel, or any agreement, arrangement or other contract that has as one of its purposes the provision of assistance.

Examples of recipients of DoD assistance covered by this Guidance include, but are not limited to:

- State and local government agencies and any other entities that receive DoD-donated land or land that is sold at or below-market rate; and
- Organizations and institutions, such as nonprofit organizations or educational institutions, receiving grants to conduct scientific, medical, environmental or other research.

Title VI prohibits discrimination in any program or activity that receives Federal financial assistance. In most cases, when a recipient receives Federal financial assistance for a particular program or activity, all operations of the recipient are covered by Title VI, not just the part of the program that uses the Federal assistance. Thus, all parts of the recipient's operations would be covered by Title VI, even if the Federal assistance were used only by one part.³ Sub-recipients likewise are covered when Federal funds are passed through from one recipient to a sub-recipient.

Finally, some recipients operate in jurisdictions in which English has been declared the official language. Nonetheless, these recipients continue to be subject to Federal non-discrimination requirements, including those applicable to the provision of federally assisted services to persons with limited English proficiency.

IV. Who is a limited English proficient individual?

Individuals who do not speak English as their primary language and who have a limited ability to read, write, speak, or understand English can be limited English proficient, or "LEP," entitled to language assistance with respect to a particular type of service, benefit, or encounter.

Examples of populations likely to include LEP persons who are encountered and/or served by DoD recipients and should be considered when planning language services include, but are not limited to:

- Persons who are included in DoD-funded medical studies;
- Persons who participate in support groups that are funded by DoD;

- Persons who encounter or who are eligible to receive benefits or services from a state or local agency that is a recipient of DoD assistance;
- Persons who encounter or are eligible to participate in portions of programs or activities of an institution of higher learning that receives DoD assistance;
- Persons who are served by programs or activities run by recipients of DoD-donated land;
- Persons who attend community meetings or other public meetings organized by DoD recipients;⁴
- Other LEP persons who encounter or are eligible to receive benefits or services from DoD recipients; and
- Parents and family members of the above.

V. How does a recipient determine the extent of its obligation to provide LEP services?

Recipients are required to take reasonable steps to ensure meaningful access to their programs and activities by LEP persons. While designed to be a flexible and fact-dependent standard, the starting point is an individualized assessment that balances the following four factors: (1) The number or proportion of LEP persons eligible to be served or likely to be encountered by the program or activity or portion thereof; (2) the frequency with which LEP individuals come in contact with the program or activity or portion thereof; (3) the nature and importance of the program, activity, service, benefit, or information provided by the recipient to people's lives; and (4) the resources available to the grantee/recipient and costs. As indicated above, the intent of this Guidance is to suggest a balance that ensures meaningful access by LEP persons to critical services while not imposing undue burdens on small business, small local governments, or small nonprofits.

After applying the above four-factor analysis, a recipient may conclude that different language assistance measures are sufficient for the different types of encounters. For instance, some portions of a recipient's program or activity will be more important than others and/or have greater impact on or contact with LEP persons, and thus may require more in the way of language assistance. The flexibility that recipients have in

addressing the needs of the LEP populations they serve does not diminish, and should not be used to minimize, the obligation that those needs be addressed. DoD recipients should apply the following four factors to the various kinds of contacts that they have with the public to assess language needs and decide what reasonable steps they should take to ensure meaningful access for LEP persons.

(1) The Number or Proportion of LEP Persons Served or Encountered in the Eligible Service Population

One factor in determining what language services recipients should provide is the number or proportion of LEP persons from a particular language group served or encountered in the eligible service population. The greater the number or proportion of these LEP persons, the more likely language services are needed. Ordinarily, persons "eligible to be served or likely to be encountered by" a recipient's program or activity are those who are served or encountered in the eligible service population. This population will be program-specific, and includes persons who are in the geographic area that has been approved by a Federal grant agency as the recipient's service area. However, where, for instance, a regional office of a nonprofit that provides support services for cancer survivors serves a large LEP population, the appropriate service area is most likely the regional office of the nonprofit organization, and not the entire population served by the non-profit. Where no service area has previously been approved, the relevant service area may be that which is approved by state or local authorities or designated by the recipient itself, provided that these designations do not themselves discriminatorily exclude certain populations. In addition, there may be circumstances in which recipients appropriately identify English language skills as an eligibility criterion, such as in the case of a university English language masters program. But other portions of the program, such as a university daycare or clinic open to the public, or various public community events, cultural exchanges, campus security, or other portions of a recipient's operations, may have a more significant LEP population that may be encountered or is eligible to participate. When considering the number or proportion of LEP individuals in a service area, recipients should consider LEP parent(s) when their English-proficient or LEP minor children and dependents encounter the recipient's program or activity.

³ However, if a Federal agency were to decide to terminate Federal funds based on noncompliance with Title VI or its regulations, only funds directed to the particular program or activity that is out of compliance would be terminated, 42 U.S.C. 2000d-1.

⁴ For additional guidance on providing meaningful access to LEP individuals at public hearings or meetings, see Department of Housing and Urban Development Notice of Guidance to Federal Assistance Recipients Regarding Title VI Prohibition Against National Origin Discrimination Affecting Limited English Proficient Persons, 68 FR 70960 (Dec. 19, 2003) (available at <http://www.hip.gov>).

created three years ago after DoD donated land from a former military base serves a large Hispanic population. The job training center may need immediate oral interpreters to be available and should give serious consideration to hiring some bilingual staff if they have not done so already. By contrast, the center may be able to rely on a telephonic interpretation service to assist those LEP individuals who speak a language that is not commonly encountered by the center. Regardless of the type of language service provided, quality and accuracy of those services can be critical in order to avoid serious consequences to the LEP person and to the recipient. Recipients have substantial flexibility in determining the appropriate mix.

VI. Selecting Language Assistance Services

Academic institutions, nonprofit organizations, and other recipients of DoD funds have a long history of interacting with people with varying language backgrounds and capabilities. In fact, many DoD recipients choose not only to provide interpretation and translation services, but also to provide English-language training for LEP individuals. This approach is consistent with the purpose of Executive Order 13166. DoD's goal is to continue to encourage these efforts and to encourage the sharing of such promising practices among recipients, as well as to ensure meaningful linguistic access for LEP individuals.

Recipients have two main ways to provide language services: Oral and written language services. Quality and accuracy of the language service is critical in order to avoid serious consequences to the LEP person and to the recipient.

A. Oral Language Services (Interpretation)

Interpretation is the act of listening to something in one language (source language) and orally translating it into another language (target language). Where interpretation is needed and is reasonable, recipients should consider some or all of the following options for providing competent interpreters in a timely manner:

- When providing oral assistance, recipients should ensure competency of the language service provider, no matter which of the strategies outlined below are used. Competency requires more than self-identification as bilingual. Some bilingual staff and community volunteers, for instance, may be able to communicate effectively in a different language

when communicating information directly in that language, but not be competent to interpret in and out of English. Likewise, they may not be able to do written translations.

- Competency to interpret, however, does not necessarily mean formal certification as an interpreter, although certification is helpful. When using interpreters, recipients should ensure that they:
- Demonstrate proficiency in and ability to communicate information accurately in both English and in the other language and identify and employ the appropriate mode of interpreting (e.g., consecutive, simultaneous, summarization, or sight translation);
- Have knowledge in both languages of any specialized terms or concepts peculiar to the entity's program or activity and of any particularized vocabulary and phraseology used by the LEP person;⁷ and understand and follow confidentiality and impartiality rules to the same extent the recipient employee for whom they are interpreting and/or to the extent their position requires;
- Understand and adhere to their role as interpreters without deviating into a role as counselor, legal advisor, or other roles, particularly in a formal context such as a hearing.

While quality and accuracy of language services is critical, the quality and accuracy of language services is nonetheless part of the appropriate mix of LEP services required. The quality and accuracy of language services provided during the medical screening of a LEP individual must be extraordinarily high, while the quality and accuracy of language services provided at a university's social program need not meet the same exacting standards.

Finally, when interpretation is needed and is reasonable, it should be provided in a timely manner. To be meaningfully effective, language assistance should be timely. While there is no single definition for "timely" applicable to all types of interactions at all times by all types of recipients, one clear guide is

⁷ Many languages have "regionalisms," or differences in usage. For instance, a word that may be understood to mean something in Spanish for someone from Cuba may not be so understood by someone from Mexico. In addition, because there may be languages which do not have an appropriate direct interpretation of some terms, the interpreter or translator should be so aware and be able to provide the most appropriate interpretation. The interpreter should make the recipient aware of the issue and the interpreter and recipient can then work to develop a consistent and appropriate set of descriptions of these terms in that language that can be used again, when appropriate.

that the language assistance should be provided at a time and place that avoids the effective denial of the service, benefit, or right at issue or the imposition of an undue burden on or delay in important rights, benefits, or services to the LEP person. For example, when the timeliness of services is important, such as with certain activities of DoD recipients providing health, economic, educational, and safety services on DoD-donated land, a recipient would likely not be providing meaningful access if it had one bilingual staffer available one day a week to provide the service. Such conduct would likely result in delays for LEP persons that would be significantly greater than those for English proficient persons. Conversely, where access to or exercise of a service, benefit, or right is not effectively precluded by a reasonable delay, language assistance can likely be delayed for a reasonable period.

Hiring Bilingual Staff. When particular languages are encountered often, hiring bilingual staff offers one of the best and often most economical options. Recipients can, for example, fill public contact positions, such as receptionists, guards, or social workers, with staff who are bilingual and competent to communicate directly with LEP persons in their language. If bilingual staff are also used to interpret between English speakers and LEP persons, or to orally interpret written documents from English into another language, they should be competent in the skill of interpreting. Being bilingual does not necessarily mean that a person has the ability to interpret. In addition, there may be times when the role of the bilingual employee may conflict with the role of an interpreter. Effective management strategies, including any appropriate adjustments in assignments and protocols for using bilingual staff, can ensure that bilingual staff are fully and appropriately utilized. When bilingual staff cannot meet all of the language service obligations of the recipient, the recipient should turn to other options.

Hiring Staff Interpreters. Hiring interpreters may be most helpful where there is a frequent need for interpreting services in one or more languages. Depending on the facts, sometimes it may be necessary and reasonable to provide on-site interpreters to provide accurate and meaningful communication with an LEP person.

Contracting for Interpreters. Contract interpreters may be a cost-effective option when there is no regular need for a particular language skill. In addition to commercial and other private

service involved, and the consequence to the LEP person if the information in question is not provided accurately or in a timely manner. For instance, a flyer announcing a soccer program run by a city agency at a former military base that was donated to that agency would not generally be considered vital, whereas written information about the application process for new affordable housing provided by the agency at that same base should likely be considered vital. Where appropriate, recipients are encouraged to create a plan for consistently determining, over time and across its various activities, what documents are "vital" to the meaningful access of the LEP populations they serve.

Categorizing a document as vital or non-vital is sometimes difficult, especially in the case of outreach materials like brochures or other information on rights and services. Awareness of rights or services is an important part of "meaningful access." Lack of awareness that a particular program, right, or service exists may effectively deny LEP individuals meaningful access. Thus, where a recipient is engaged in community outreach activities in furtherance of its activities, it should regularly assess the needs of the populations frequently encountered or affected by the program or activity to determine whether certain critical outreach materials should be translated. Community organizations may be helpful in determining what outreach materials may be most helpful to translate. In addition, the recipient should consider whether translations of outreach material may be made more effective when done in tandem with other outreach methods, including utilizing the ethnic media, schools, and religious and community organizations to spread a message.

Sometimes a document includes both vital and non-vital information. This may be the case when the document is very large. It may also be the case when the title and a phone number for obtaining more information on the contents of the document in frequently-encountered languages other than English is critical, but the document is sent out to the general public and cannot reasonably be translated into many languages and/or the language of the recipient is not known. Thus, vital information may include, for instance, the provision of information in appropriate languages other than English regarding where a LEP person might obtain an interpretation or translation of the document.

Into What Languages Should Documents be Translated? The

languages spoken by the LEP individuals with whom the recipient has contact determine the languages into which vital documents should be translated. A distinction should be made, however, between languages that are frequently encountered by a recipient and less commonly-encountered languages. Many recipients serve communities in large cities or across the country. They regularly serve LEP persons who speak dozens and sometimes over 100 different languages. To translate all written materials into all of those languages is unrealistic, for although recent technological advances have made it easier for recipients to store and share translated documents, such an undertaking could incur substantial costs and require substantial resources. Nevertheless, well-substantiated claims of lack of resources to translate all vital documents into dozens of languages do not necessarily relieve the recipient of the obligation to translate those documents into at least several of the more frequently-encountered languages and to set benchmarks for continued translations into the remaining languages over time. As a result, the extent of the recipient's obligation to provide written translations of documents should be determined by the recipient on a case-by-case basis, looking at the totality of the circumstances in light of the four-factor analysis. Because translation is a one-time expense, consideration should be given to whether the upfront cost of translating a document (as opposed to oral interpretation) should be amortized over the likely lifespan of the document when applying this four-factor analysis.

Safe Harbor. Many recipients would like to ensure with greater certainty that they comply with their obligations to provide written translations in languages other than English. Paragraphs (a) and (b) below outline the circumstances that can provide a "safe harbor" for recipients regarding the requirements for translation of written materials. A "safe harbor" means that if a recipient provides written translations under these circumstances, such action will be considered strong evidence of compliance with the recipient's written-translation obligations.

The failure to provide written translations under the circumstances outlined in paragraphs (a) and (b) does not mean there is non-compliance. Rather, they provide a common starting point for recipients to consider whether and at what point the importance of the service, benefit, or activity involved; the nature of the information sought; and the number or proportion of LEP persons served call for written

translations of commonly-used forms into frequently-encountered languages other than English. Thus, those paragraphs merely provide a guide for recipients that would like greater certainty of compliance than can be provided by a fact-intensive, four-factor analysis.

Example: Even if the safe harbors are not used, if written translation of a certain document(s) would be so burdensome as to defeat the legitimate objectives of its program, the translation of the written materials is not necessary. Other ways of providing meaningful access, such as effective oral interpretation of certain vital documents, might be acceptable under such circumstances.

When determining whether to provide translated documents or oral language services, recipients should consider the literacy rates of the LEP communities they serve. For example, certain languages (e.g., Hmong) until recently have been oral and not written, thus a high percentage of such LEP speakers may be unable to read translated documents or written instructions. Data analysis, utilizing information from a range of community groups and other sources, may provide a recipient with insight into whether translation of vital documents meets the goal of providing meaningful access, or whether it makes more sense to focus those resources on oral, and, where appropriate, graphics- or visually-based information exchange.

Safe Harbor. The following actions will be considered strong evidence of compliance with the recipient's written-translation obligations:

(a) DoD recipient provides written translations of vital documents for each eligible LEP language group that constitutes five percent or 1,000, whichever is less, of the population of persons eligible to be served or likely to be affected or encountered. Translation of other documents, if needed, can be provided orally; or

(b) If there are fewer than 50 persons in a language group that reaches the five percent trigger in (a), the recipient does not translate vital written materials but provides written notice in the primary language of the LEP language group of the right to receive competent oral interpretation of those written materials, free of cost.

These safe harbor provisions apply to the translation of written documents only. They do not affect the requirement to provide meaningful access to LEP individuals through competent oral interpreters where oral language services are needed and are reasonable. For example, even when there is only one LEP individual who is participating

(3) Training Staff

Staff should know their obligations to provide meaningful access to information and services for LEP persons. An effective LEP plan would likely include training to ensure that:

- Staff know about LEP policies and procedures.
- Staff having contact with the public (or those in a recipient's custody) are trained to work effectively with in-person and telephone interpreters.

Recipients may want to include this training as part of the orientation for new employees. It is important to ensure that all employees in public contact positions (or having contact with those in a recipient's custody) are properly trained. Recipients have flexibility in deciding the manner in which the training is provided. The more frequent the contact with LEP persons, the greater the need will be for in-depth training. Staff with little or no contact with LEP persons may only have to be aware of an LEP plan. However, management staff, even if they do not interact regularly with LEP persons, should be fully aware of and understand the plan so they can reinforce its importance and ensure its implementation by staff.

(4) Providing Notice to LEP Persons

Once an agency has decided, based on the four factors, that it will provide language services, it is important for the recipient to let LEP persons know that those services are available and that they are free of charge. Recipients should provide this notice in a language LEP persons will understand. Examples of notification that recipients should consider include:

Posting signs in intake areas and other entry points. When language assistance is needed to ensure meaningful access to information and services, it is important to provide notice in appropriate languages in intake areas or initial points of contact so that LEP persons can learn how to access those language services. This is particularly true in areas with high volumes of LEP persons seeking access to certain health, educational, safety, or economic services or activities run by DoD recipients. For instance, signs in intake offices could state that free language assistance is available. The signs should be translated into the most common languages encountered. They should explain how to get the language help.⁹

⁹ The Social Security Administration has made such signs available at <http://www.ssa.gov/multilanguage/langlist1.htm>. These signs could, for example, be modified for recipient use.

- Stating in outreach documents that language services are available from the agency. Announcements could be in, for instance, brochures, booklets, and in outreach and recruitment information. These statements should be translated into the most common languages and could be "tagged" onto the front of common documents.
- Working with community-based organizations and other stakeholders to inform LEP individuals of the recipients' services, including the availability of language assistance services.
- Using a telephone voice mail menu. The menu could be in the most common languages encountered. It should provide information about available language assistance services and how to get them.
- Including notices in local newspapers in languages other than English.
- Providing notices on non-English-language radio and television stations about the available language assistance services and how to get them.
- Presentations and/or notices at schools and religious organizations.

(5) Monitoring and Updating the LEP Plan

Recipients should, where appropriate, have a process for determining, on an ongoing basis, whether new documents, programs, services, and activities need to be made accessible for LEP individuals, and they may want to provide notice of any changes in services to the LEP public and to employees. In addition, recipients should consider whether changes in demographics, types of services, or other needs require annual reevaluation of their LEP plan. Less frequent reevaluation may be more appropriate where demographics, services, and needs are more static. One good way to evaluate the LEP plan is to seek feedback from the community.

In their reviews, recipients may want to consider assessing changes in:

- Current LEP populations in service area or population affected or encountered.
- Frequency of encounters with LEP language groups.
- Nature and importance of activities to LEP persons.
- Availability of resources, including technological advances and sources of additional resources, and the costs imposed.
- Whether existing assistance is meeting the needs of LEP persons.
- Whether staff knows and understands the LEP plan and how to implement it.

- Whether identified sources for assistance are still available and viable.

In addition to these five elements, effective plans set clear goals, management accountability, and opportunities for community input and planning throughout the process.

VIII. Voluntary Compliance Effort

The goal for Title VI and Title VI regulatory enforcement is to achieve voluntary compliance. The requirement to provide meaningful access to LEP persons is enforced and implemented by DoD through the procedures identified in the Title VI regulations. These procedures include complaint investigations, compliance reviews, efforts to secure voluntary compliance, and technical assistance.

The Title VI regulations provide that DoD will investigate whenever it receives a complaint, report, or other information that alleges or indicates possible noncompliance with Title VI or its regulations. If the investigation results in a finding of compliance, DoD will inform the recipient in writing of this determination, including the basis for the determination. DoD uses voluntary mediation to resolve most complaints. However, if a case is fully investigated and results in a finding of noncompliance, DoD must inform the recipient of the noncompliance through a Letter of Findings that sets out the areas of noncompliance and the steps that must be taken to correct the noncompliance. It must attempt to secure voluntary compliance through informal means. If the matter cannot be resolved informally, DoD must secure compliance through the termination of Federal assistance after DoD recipient has been given an opportunity for an administrative hearing and/or by referring the matter to a DOJ litigation section to seek injunctive relief or pursue other enforcement proceedings. DoD engages in voluntary compliance efforts and provides technical assistance to recipients at all stages of an investigation. During these efforts, DoD proposes reasonable timetables for achieving compliance and consults with and assists recipients in exploring cost-effective ways of coming into compliance. In determining a recipient's compliance with the Title VI regulations, DoD's primary concern is to ensure that the recipient's policies and procedures provide meaningful access for LEP persons to the recipient's programs and activities.

While all recipients must work toward building systems that will ensure access for LEP individuals, DoD

 - d. Any other identification number: [Docket ID: DOD-2013-OS-0133]

for the item and the imposition of a fee were previously agreed upon in writing. The supplementary information further states that other types of overdraft products not pursuant to a written agreement typically are not covered consumer credit "because Regulation Z excludes from 'finance charge' any charge imposed by a creditor for credit extended to pay an item that overdraws an asset account and for which the borrower pays any fee or charge, unless the payment of such an item and the imposition of the fee or charge were previously agreed upon in writing."²

Thus, whether or not a particular overdraft product or service is "consumer credit" under the MLA regulation depends on whether the product or service meets each element of the definition of "consumer credit" and whether an exception applies.

2. Does credit that a creditor extends for the purpose of purchasing personal property, which secures the credit, fall within the exception to "consumer credit" under 32 CFR 232.3(f)(2)(iii) where the creditor simultaneously extends credit in an amount greater than the purchase price?

Answer: No. Section 232.3(f)(1) defines "consumer credit" as credit extended to a covered borrower primarily for personal, family, or household purposes that is subject to a finance charge or payable by written agreement in more than four installments. Section 232.3(f)(2) provides a list of exceptions to paragraph (f)(1), including an exception for any credit transaction that is expressly intended to finance the purchase of personal property when the credit is secured by the property being purchased. A hybrid purchase money and cash advance loan is not expressly intended to finance the purchase of personal property, because the loan provides additional financing that is unrelated to the purchase. To qualify for the purchase money exception from the definition of consumer credit, a loan must finance only the acquisition of personal property. Any credit transaction that provides purchase money secured financing of personal property along with additional "cash-out" financing is not eligible for the exception under § 232.3(f)(2)(iii) and must comply with the provisions set forth in the MLA regulation.

3. Under 32 CFR 232.4(b), are creditors permitted to waive fees or periodic charges at the end of a billing cycle or earlier for open-end credit, in order to prevent a borrower from being assessed a military annual percentage rate (MAPR) in excess of 36 percent during that billing cycle?

Answer: Yes. Section 232.4(b) requires that a creditor may not impose an MAPR greater than 36 percent in connection with an extension of consumer credit that is closed-end credit or in any billing cycle for open-end credit. In an open-end credit account, a covered borrower's use of a line of credit might, under certain circumstances, give rise to the imposition of a combination of fees and/or periodic charges that would cause the MAPR to exceed the limit in § 232.4(b). A creditor can comply with § 232.4(b) by designing a combination of periodic rates and fees that cannot possibly result in an MAPR greater than 36 percent. Nevertheless, nothing in 32 CFR part 232 prohibits a creditor from complying by waiving fees or finance charges, either in whole or in part, in order to reduce the MAPR to 36 percent or below in a given billing cycle. Thus, a creditor could alternatively comply by not imposing charges in excess of 36 percent MAPR that would otherwise be permitted under the credit agreement.

4. Are fees that a creditor is required to pay by law and passes through to a covered borrower required to be included in the calculation of the MAPR?

Answer: 32 CFR 232.4(c)(1) details the charges that must be included in the calculation of the MAPR. Among the charges that must be included are finance charges associated with the consumer credit. Finance charges are defined by § 232.3(ii) to mean a "finance charge" in Regulation Z. If such fees are considered "finance charges" under Regulation Z, then such fees must be included in the calculation of the MAPR, unless they are bona fide fees charged to a credit card account that are excludable under § 232.4(d). However, if the fees are not "finance charges" under Regulation Z, then they may be excluded from the calculation of the MAPR, provided they do not qualify for any of the other categories of charges listed under § 232.4(c)(1).

5. For open-end credit, what constitutes a situation where the MAPR cannot be calculated because there is "no balance" in the billing cycle under 32 CFR 232.4(c)(2)(ii)(B)?

Answer: Section 232.4(c)(2)(ii)(B) specifically provides that for open-end credit, if the MAPR cannot be calculated in a billing cycle because there is "no balance" in the billing cycle, a creditor may not impose any fee or charge during that billing cycle, except for a participation fee that complies with the limitations set forth in § 232.4(c)(2)(ii)(B). Because the provision is tied to whether the MAPR can be calculated based on whether there is a balance in the billing cycle, creditors that impose fees or charges that are excluded from the calculation of the MAPR during a particular billing cycle are not subject to the limitations in § 232.4(c)(2)(ii)(B) for that billing cycle, as there would be no MAPR to calculate whether or not there was a balance during the billing cycle. For example, if a creditor charged a late fee for a late payment in accordance with its credit agreement with the covered borrower and in compliance with Regulation Z, the creditor may charge the fee, regardless of whether there is a balance in the billing cycle, because a late fee is not among the charges that are included in the calculation of the MAPR.

Furthermore, § 232.4(c)(2)(ii)(A) states that the MAPR shall be calculated following the rules set forth in 12 CFR 1026.14(c) and (d) of Regulation Z. Thus, the reference in § 232.4(c)(2)(ii)(B) to a situation in which the MAPR cannot be calculated in a billing cycle, because there is no balance, relates solely to the situation like the one described in 12 CFR 1026.14(c)(2), which is the only provision in 12 CFR 1026.14(c) and (d) that describes the inability to calculate an effective annual percentage rate when there is no balance in the billing cycle. 12 CFR 1026.14(c)(2) discusses how to compute an effective annual percentage rate when the charge imposed during the billing cycle is or includes a minimum, fixed, or other charge not due to the application of a periodic rate, other than a charge with respect to any specific transaction during the billing cycle. Under 12 CFR 1026.14(c)(2), if there is no balance to which the charge is applicable, an effective annual percentage rate cannot be determined under the section. Similarly, § 232.4(c)(2)(ii)(B) relates to when finance charge imposed during the billing cycle is or includes a minimum, fixed or other charge not due to the

² 80 FR 43580.

10. Does the historic lookback provision of 32 CFR 232.5(b)(2)(B) prevent creditors from adopting a risk management plan that includes periodically screening credit portfolios to discover changes to covered borrower status?

Answer: No. Section 232.5 explains the methods available to creditors when determining a consumer's covered borrower status prior to or at the time the parties enter into a transaction or an account is created. The provision permits a creditor to use its own method to assess covered borrower status, and it provides a safe harbor to a creditor that employs either of two available methods: Using information obtained directly or indirectly from the DMDC database; or obtaining a consumer report from a nationwide consumer reporting agency (or a reseller of the same) containing a statement, code, or similar indicator describing that status. To benefit from the safe harbor provision, a creditor must determine a consumer's covered borrower status at or before the time of the transaction or the time an account is established and make a record of the determination. Section 232.5(b)(2)(B) prohibits a creditor from accessing the DMDC database after the time a consumer entered into a transaction or established an account for a specific purpose, namely "to ascertain whether a consumer had been a covered borrower as of the date of that transaction or as of the date that account was established." Therefore, the plain language of the regulation does not prohibit a creditor or assignee from accessing the DMDC database for other purposes, such as determining whether a previously covered borrower retains that status. However, as stated in § 232.7, other State or Federal laws providing greater protections to covered borrowers may apply to covered transactions under the MLA. Creditors should ensure compliance with any such laws that may apply to them and these transactions.

11. Does the particular internet address referenced in 32 CFR 232.5(b)(2) limit the availability of a safe harbor for a covered borrower check conducted through alternative methods of accessing the MLA database provided by the Department?

Answer: No. Under the safe harbor provided in § 232.5(b)(1), a creditor may conclusively determine whether credit is offered to a covered borrower by assessing the status of a consumer using information related to that consumer obtained from the database, maintained by the DMDC, for that purpose. Section

232.5(b)(2) references a uniform resource locator (URL), more commonly known as an Internet address, as a convenience to assist the public in locating the DMDC MLA database. However, that particular URL address itself does not serve as a restriction on the method through which the DMDC MLA database is accessed. For technological reasons, the Department may from time to time revise the DMDC MLA URL through providing notice on the DMDC MLA Web page. Therefore, a creditor who makes a determination regarding the status of a consumer by accessing the database maintained by the DMDC through a URL provided by the DMDC that is different from the one specifically referenced in § 232.5(b)(2) may still take advantage of the safe harbor in § 232.5(b)(1), so long as the creditor timely creates and thereafter maintains a record of the information so obtained as provided in § 232.5(b)(3).

Furthermore, the Department is currently developing a pilot project in collaboration with several financial service providers that anticipate a large volume of covered borrower checks. In this pilot project, the Department is experimenting with a direct connection that may improve access to the DMDC database for the financial services industry. This direct connection pilot project accesses the same DMDC database available through an internet query. A creditor may verify the status of a consumer by using the database maintained by the Department for that purpose, even though the creditor uses a method of accessing that database provided by the Department other than the particular URL listed in § 232.5(b)(2). Thus, a creditor who makes a determination regarding the status of a consumer under § 232.5(b)(2) by participating in the Department's direct connection pilot project (or a similar form of access should it be provided by the Department at a future date) is deemed conclusive with respect to that transaction or account involving consumer credit between the creditor and that consumer, so long as that creditor timely creates and thereafter maintains a record of the information so obtained as provided in § 232.5(b)(3).

12. How may a creditor orally provide the payment obligation disclosure required under 32 CFR 232.6(a)(3) to meet the requirements of 32 CFR 232.6(d)(2)?

Answer: Section 232.6(a)(3) requires a creditor to provide to a covered borrower, before or at the time the borrower becomes obligated on the transaction or establishes an account for the consumer credit, a clear description

of the payment obligation of the covered borrower, as applicable. A payment schedule (in the case of closed-end credit) or an account-opening disclosure (in the case of open-end credit) provided pursuant to the requirement to provide Regulation Z disclosures satisfies this obligation. Therefore, a creditor may orally provide the information in a payment schedule or an account-opening disclosure to a covered borrower. However, an oral recitation of the payment schedule or the account-opening disclosure is not the only way a creditor may comply with § 232.6(a)(3). A creditor may also orally provide a clear description of the payment obligation of the covered borrower by providing a general description of how the payment obligation is calculated or a description of what the borrower's payment obligation would be based on an estimate of the amount the borrower may borrow. For example, a creditor could generally describe how minimum payments are calculated on open-end credit plans issued by the creditor and then refer the covered borrower to the written materials the borrower will receive in connection with opening the plan. Alternatively, a creditor could choose to generally describe borrowers' obligations to make a monthly, bi-monthly, or weekly payment as the case may be under the borrowers' agreements.

Neither the MLA nor the MLA regulation specifies particular content or format for the requirement of a clear, oral description of the payment obligation. Also, nothing in the MLA or the MLA regulation requires that the clear description of the payment obligation provided in writing must be the same as the oral disclosure, provided that both disclosures are clear and accurate. As explained in the supplementary information to the Department's July 2015 Final Rule, the Department's approach has been to interpret the MLA's oral disclosure requirement in a manner that provides creditors "straightforward mechanisms" that afford "latitude to develop the same (or consistent) systems to orally provide the required disclosures—regardless of the particular context." The requirement of a clear, oral payment obligation disclosure has sufficient breadth that creditors may choose a variety of acceptable oral disclosure compliance strategies. Thus, under the Department's approach, a generic oral description of the payment obligation may be provided, even though the disclosure is the same for borrowers

credit, unless otherwise prohibited by law. While § 232.8(g) prohibits a creditor from requiring as a condition for the extension of consumer credit that the covered borrower establish an allotment to repay an obligation, the regulation does not apply this restriction to a "military welfare society" or a "service relief society" as defined in 37 U.S.C. 1007(h)(4).

17. Does the limitation in § 232.8(e) on a creditor using a check or other method of access to a deposit, savings, or other financial account maintained by the covered borrower prohibit the borrower from granting a security interest to a creditor in the covered borrower's checking, savings or other financial account?

Answer: No. The prohibition in § 232.8(e) does not prohibit covered borrowers from granting a security interest to a creditor in the covered borrower's checking, savings, or other financial account, provided that it is not otherwise prohibited by applicable law and the creditor complies with the MLA regulation including the limitation on the MAPR to 36 percent. As discussed in Question and Answer #16 of these Interpretations, § 232.8(e) prohibits a creditor from using the borrower's account information to create a remotely created check or remotely created payment order in order to collect payments on consumer credit from a covered borrower or using a post-dated check provided at or around the time credit is extended.

Section 232.8(e)(3) further clarifies that covered borrowers may convey security interests in checking, savings, or other financial accounts by describing a permissible security interest granted by covered borrowers. Thus, for example, a covered borrower may grant a security interest in funds deposited in a checking, savings, or other financial account after the extension of credit in an account established in connection with the consumer credit transaction.

18. Does the limitation in § 232.8(e) on a creditor using a check or other method of access to a deposit, savings, or other financial account maintained by the covered borrower prohibit a creditor from exercising a statutory right to take a security interest in funds deposited within a covered borrower's account?

Answer: No. Under certain circumstances federal or state statutes may grant creditors statutory liens on funds deposited within covered borrowers' asset accounts. For example, under 12 U.S.C. 1757(11) federal credit unions may "enforce a lien upon the

shares and dividends of any member, to the extent of any loan made to him and any dues or charges payable by him." As discussed in Question and Answer #16 of these Interpretations, § 232.8(e) serves to prohibit a creditor from using the borrower's account information to create a remotely created check or remotely created payment order in order to collect payments on consumer credit from a covered borrower or using a post-dated check provided at or around the time credit is extended. Section 232.8(e)(3) describes a permissible activity under § 232.8(e). However, the fact that § 232.8(e)(3) specifies a particular time when a creditor may take a security interest in funds deposited in an account does not change the general effect of the prohibition in § 232.8(e). Therefore, § 232.8(e) does not impede a creditor from exercising a statutory right to take a security interest in funds deposited in an account at any time, provided that the security interest is not otherwise prohibited by applicable law and the creditor complies with the MLA regulation, including the limitation on the MAPR to 36 percent.

19. Under 32 CFR 232.3(f)(2)(ii) and 232.8(f) what methods of transportation are included within the definition of a "vehicle"?

Answer: For purposes of the MLA, the term "vehicle" means any self-propelled vehicle primarily used for personal, family, or household purposes for on-road transportation. The term does not include motor homes, recreational vehicles (RVs), golf carts, or motor scooters.

III. Regulatory Impact

Executive Order 12866, "Regulatory Planning and Review" and Executive Order 13563, "Improving Regulation and Regulatory Review"

Executive Orders 13563 and 12866 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. It has been determined that this is not a significant rule. This interpretive rule will not have an annual effect of \$100 million or more on the economy, or adversely affect productivity, competition, jobs, the

environment, public health or safety, or State or local governments. This rulemaking will not interfere with an action taken or planned by another agency, or raise new legal or policy issues. Finally, this rulemaking will not alter the budgetary impacts of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients of such programs. Accordingly, this rulemaking is not subject to Office of Management and Budget (OMB) review under Executive Order 12866.

2 U.S.C. Ch. 25, "Unfunded Mandates Reform Act"

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) (2 U.S.C. 1532) requires agencies to assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2014, that threshold is approximately \$141 million. This rule will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

Public Law 96-354, "Regulatory Flexibility Act" (5 U.S.C. Ch. 6)

The Department of Defense certifies that this rule is not subject to the Regulatory Flexibility Act (5 U.S.C. 601) because it would not, if promulgated, have a significant economic impact on a substantial number of small entities. Therefore, the Regulatory Flexibility Act, as amended, does not require us to prepare a regulatory flexibility analysis.

Public Law 96-511, "Paperwork Reduction Act" (44 U.S.C. Chapter 35)

This rule does not impose reporting and record keeping requirements under the Paperwork Reduction Act of 1995.

Executive Order 13132, "Federalism"

This rule was analyzed in accordance with the principles and criteria contained in Executive Order 13132 ("Federalism"). It has been determined that it does not have sufficient Federalism implications to warrant the preparation of a Federalism summary impact statement. This rule has no substantial effect on the States, or on the current Federal-State relationship, or on the current distribution of power and responsibilities among the various local officials. Nothing in this rule preempts any State law or regulation. Therefore, Department did not consult with State and local officials because it was not necessary.

ENCLOSURE 5

1. **Title:** Military Lending Act Limitations on Terms of Consumer Credit Extended to Service Members and Dependents
2. **Type of Document:** Interpretive Rule; Amendment
3. **Description:** The Department issued the first set of interpretations of its Military Lending Act (MLA) regulation in the form of questions and answers. This interpretive rule amends and adds to those questions and answers to provide guidance on certain questions the Department received regarding compliance with the July 2015 Final Rule. This interpretive rule does not substantively change the regulation implementing the MLA, but rather merely states the Department's preexisting interpretations of an existing regulation.
4. **Date of Issuance:** December 14, 2017
5. **Issuing agency, component, office, or program:** Department of Defense, Office of the Under Secretary of Defense for Personnel and Readiness
6. **An indication of whether:**
 - a. The guidance was considered significant? NO
 - b. The agency submitted guidance for review by Office of Information and Regulatory Affairs? YES
 - i. The title of the guidance used in the submission: Military Lending Act Limitations on Terms of Consumer Credit Extended to Service Members and Dependents
 - ii. The date submitted: August 11, 2017
 - c. The agency submitted the guidance to Congress and GAO? YES
 - i. The title of the guidance used in the submission: Military Lending Act Limitations on Terms of Consumer Credit Extended to Service Members and Dependents
 - ii. The date submitted: December 11, 2017
 - d. The Regulatory Reform Task Force review of the guidance document, and results of review: The DoD Regulatory Reform Task Force did not review this interpretive rule as it is a new rule.
7. **To the extent applicable:**
 - a. Federal Register citation: 82 FR 58739
 - b. Hyperlink to copy of document:
<https://www.gpo.gov/fdsys/pkg/FR-2017-12-14/pdf/2017-26974.pdf>
 - c. Regulation Identification Number: 0790-ZA13
 - d. Any other identification number: [Docket ID: DOD-2017-OS-0038]

part 232. For ease of reference, the following terms are used throughout this document: MLA refers to the Military Lending Act (codified at 10 U.S.C. 987); MAPR refers to the military annual percentage rate, as defined in 32 CFR 232.3(p).

In order to provide further guidance to industry and the public on the Department's view of its existing regulation, the Department amends its guidance on three questions and provides one additional question and answer. The numbering of this document follows the numbering of the questions and answers provided in the August 26, 2016 Interpretive Rule.

2. Does credit that a creditor extends for the purpose of purchasing a motor vehicle or personal property, which secures the credit, fall within the exception to "consumer credit" under 32 CFR 232.3(f)(2)(ii) or (iii) where the creditor simultaneously extends credit in an amount greater than the purchase price of the motor vehicle or personal property?

Answer: The answer will depend on what the credit beyond the purchase price of the motor vehicle or personal property is used to finance. Generally, financing costs related to the object securing the credit will not disqualify the transaction from the exceptions, but financing credit-related costs will disqualify the transaction from the exceptions.

Section 232.3(f)(1) defines "consumer credit" as credit offered or extended to a covered borrower primarily for personal, family, or household purposes that is subject to a finance charge or payable by written agreement in more than four installments. Section 232.3(f)(2) provides a list of exceptions to paragraph (f)(1), including an exception for any credit transaction that is expressly intended to finance the purchase of a motor vehicle when the credit is secured by the vehicle being purchased and an exception for any credit transaction that is expressly intended to finance the purchase of personal property when the credit is secured by the property being purchased.

A credit transaction that finances the object itself, as well as any costs expressly related to that object, is covered by the exceptions in § 232.3(f)(2)(ii) and (iii), provided it does not also finance any credit-related product or service. For example, a credit transaction that finances the purchase of a motor vehicle (and is secured by that vehicle), and also finances optional leather seats within that vehicle and an extended warranty for service of that vehicle is eligible for the exception

under § 232.3(f)(2)(ii). Moreover, if a covered borrower trades in a motor vehicle with negative equity as part of the purchase of another motor vehicle, and the credit transaction to purchase the second vehicle includes financing to repay the credit on the trade-in vehicle, the entire credit transaction is eligible for the exception under § 232.3(f)(2)(ii) because the trade-in of the first motor vehicle is expressly related to the purchase of the second motor vehicle. Similarly, a credit transaction that finances the purchase of an appliance (and is secured by that appliance), and also finances the delivery and installation of that appliance, is eligible for the exception under § 232.3(f)(2)(iii).

In contrast, a credit transaction that also finances a credit-related product or service rather than a product or service expressly related to the motor vehicle or personal property is not eligible for the exceptions under § 232.3(f)(2)(ii) and (iii). For example, a credit transaction that includes financing for Guaranteed Auto Protection insurance or a credit insurance premium would not qualify for the exception under § 232.3(f)(2)(ii) or (iii). Similarly, a hybrid purchase money and cash advance credit transaction is not expressly intended to finance the purchase of a motor vehicle or personal property because the credit transaction provides additional financing that is unrelated to the purchase. Therefore, any credit transaction that provides purchase money secured financing of a motor vehicle or personal property along with additional "cashout" financing is not eligible for the exceptions under § 232.3(f)(2)(ii) and (iii) and must comply with the provisions set forth in the MLA regulation.

17. Does the limitation in § 232.8(e) on a creditor using a check or other method of access to a deposit, savings, or other financial account maintained by the covered borrower prohibit the borrower from granting a security interest to a creditor in the covered borrower's checking, savings or other financial account?

Answer: No. The prohibition in § 232.8(e) does not prohibit covered borrowers from granting a security interest to a creditor in the covered borrower's checking, savings, or other financial account, provided that it is not otherwise prohibited by other applicable law and the creditor complies with all other provisions of the MLA regulation, including the limitation on the MAPR to 36 percent. As discussed in Question and Answer #16 of these Interpretations, § 232.8(e) prohibits a creditor from using the borrower's account information to create

a remotely created check or remotely created payment order in order to collect payments on consumer credit from a covered borrower or using a post-dated check provided at or around the time credit is extended.

Section 232.8(e)(3) further clarifies that covered borrowers may convey security interests in checking, savings, or other financial accounts by describing a permissible security interest granted by covered borrowers. Borrowers may convey security interests for all types of consumer credit covered by the MLA regulation.

Creditors should also note, however, that 32 CFR 232.7(a) provides that the MLA does not preempt any State or Federal law, rule or regulation to the extent that such law, rule or regulation provides greater protection to covered borrowers than the protections provided by the MLA. For example, although the MLA regulation does not prohibit borrowers from conveying security interests in all types of consumer credit covered by the regulation, including credit card accounts, such accounts may also be subject to other laws, rules and regulations governing offsets and security interests. See, e.g., 12 CFR 1026.12(d).

18. Does the limitation in § 232.8(e) on a creditor using a check or other method of access to a deposit, savings, or other financial account maintained by the covered borrower prohibit a creditor from exercising a statutory right, or a right arising out of a security interest a borrower grants to a creditor, to take a security interest in funds deposited within a covered borrower's account at any time?

Answer: No. In addition to the security interests granted by borrowers to creditors, as discussed in Question and Answer #17 of these Interpretations, above, under certain circumstances Federal or State statutes may grant creditors statutory liens on funds deposited within covered borrowers' asset accounts. Section 232.8(e) does not prohibit a creditor from exercising rights to take a security interest in funds deposited into a covered borrower's account at any time, including enforcing statutory liens, provided that it is not otherwise prohibited by other applicable law and the creditor complies with all other provisions of the MLA regulation, including the limitation on the MAPR to 36 percent. For example, under 12 U.S.C. 1757(11), Federal credit unions may "enforce a lien upon the shares and dividends of any member, to the extent of any loan made to him and any dues or charges payable by him."

consumers associated with such ancillary credit-related products.⁷

Based on available data, the Department estimates the annual total market revenue for these products at \$6,116.5 and \$3,761.7 million, respectively, or a total of \$9,878.1 million. The Department estimates that the covered borrower market for these products is .95 percent of the total market for these products, as covered borrower households represent .95 percent of total U.S. households, which implies a total possible market for covered borrowers of approximately \$93.8 million. Of these covered borrowers, the Department estimates that only a very small portion of these consumers could include the Service members and their families covered by the MLA. As an example, if the typical consumer of such a product is an enlisted Service member under 25, does not have a college degree, and owns a car, the possible market value relevant to the MLA and this interpretive rule might be more like \$21.7 million.⁸ Within this further market segment, an undetermined percentage of these products actually offer interest rates greater than 36 percent and would actually be purchased by this group, which would represent the share of products that fall under the MLA requirement. Generally, in this and other possible scenarios across age groups and other demographic characteristics, the Department anticipates the universe of products that

exceed 36 percent interest in this category is very small and possibly negligible, especially considering the time that has passed since the final rule was issued. This number is anticipated to be even more likely to be negligible when considering the number of covered borrowers who would choose to consume this product particularly in light of the existing MLA requirement.

2 U.S.C. Ch. 25, "Unfunded Mandates Reform Act"

Section 202 of the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1532) requires agencies to assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2014, that threshold is approximately \$141 million. This rule will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

Public Law 96-354, "Regulatory Flexibility Act" (5 U.S.C. Ch. 6)

The Department of Defense certifies that this rule is not subject to the Regulatory Flexibility Act (5 U.S.C. 601) because it would not, if promulgated, have a significant economic impact on a substantial number of small entities. Therefore, the Regulatory Flexibility Act, as amended, does not require us to prepare a regulatory flexibility analysis.

Public Law 96-511, "Paperwork Reduction Act" (44 U.S.C. Chapter 35)

This rule does not impose reporting and record keeping requirements under the Paperwork Reduction Act of 1995.

Executive Order 13132, "Federalism"

This rule was analyzed in accordance with the principles and criteria contained in Executive Order 13132 ("Federalism"). It has been determined that it does not have sufficient Federalism implications to warrant the preparation of a Federalism summary impact statement. This rule has no substantial effect on the States, or on the current Federal-State relationship, or on the current distribution of power and responsibilities among the various local officials. Nothing in this rule preempts any State law or regulation. Therefore, the Department did not consult with State and local officials because it was not necessary.

Dated: December 11, 2017.

Patricia L. Toppings,

OSD Federal Register Liaison Officer,
Department of Defense.

BILLING CODE 5001-06-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG-2017-1053]

RIN 1625-AA00

Safety Zone; Delaware River, Pipeline Removal, Marcus Hook, PA

AGENCY: Coast Guard, DHS.

ACTION: Interim rule and request for comments.

SUMMARY: This interim rule modifies and extends the effective period of the existing temporary safety zone encompassing all navigable waters within a 250-yard radius of Commerce Construction vessels and machinery conducting diving and pipeline removal operations in the Delaware River, in the vicinity of Anchorage 7, near Marcus Hook, PA. The safety zone is needed to protect personnel, vessels, and the marine environment from potential hazards created by diving and pipeline removal operations. Entry of vessels or persons into this zone is prohibited unless specifically authorized by the Captain of the Port Delaware Bay. We invite your comments on this rulemaking.

DATES: This rule is effective without actual notice from December 14, 2017. For the purposes of enforcement, actual notice will be used from December 9, 2017, through December 14, 2017. Comments and related material must be received by the Coast Guard on or before January 16, 2018.

ADDRESSES: Documents mentioned in this preamble are part of Docket Number USCG-2017-1053. To view documents mentioned in this preamble as being available in the docket, go to <http://www.regulations.gov>, type the docket number in the "SEARCH" box and click "SEARCH." Click on "Open Docket Folder" on the line associated with this rulemaking. You may submit comments, identified by docket number, using the Federal eRulemaking Portal at <http://www.regulations.gov>. See the "Public Participation and Request for Comments" portion of the SUPPLEMENTARY INFORMATION section for

⁷ See Experian, "State of the Automotive Finance Market: A Look at Loans and Leases in Q4 2016," at 11, 19 (2016); Coleman Advisors, "F&I Products Industry Market Commentary," at 2 (2016), available at coladv.com/wp-content/uploads/FI-Product-Industry-Report-April-2016.pdf; F&I and Showroom, "Tracking F&I Performance," <http://www.f-i-magazine.com/articles/story/2012/01/tracking-f-i-performance.aspx> (last visited Sept. 20, 2017). The Department's research indicates that the available data regarding credit-related ancillary products in the auto lending marketplace are limited and primarily derived from informal surveys and reports.

⁸ Approximately 82 percent of Service members are enlisted; 91 percent do not have college degrees; 44 percent are under 25 years of age; and 67 percent of those under 25 own or lease at least one vehicle. The intersection of these portions creates a factor of approximately .22, which can be applied to the total market value of approximately \$93.8 million, resulting in a possible market segment of approximately \$21.7 million. This segment would then require further apportionment to reflect the share of the products therein that offer interest rates above the 36 percent cap. See 2015 Demographics Profile of the Military Community, Chapter 2: Department of Defense, available at <http://download.militarymatters.com/12038/MOS/Reports/2015-Demographics-Report.pdf> and Table 3202, Consumer units with reference person under age 25 by income before taxes: Average annual expenditures, Consumer Expenditure Survey, 2015-2016, Bureau of Labor Statistics, available at <https://www.bls.gov/exx/2016/CrossTab/regional/xunder25.PDF>.

Appendix H

Department of Justice

U.S. Department of Justice

Office of Legislative Affairs

Office of the Assistant Attorney General

Washington, D.C. 20530

FEB 20 2018

The Honorable Trey Gowdy
Chairman
Committee on Oversight and
Government Reform
U.S. House of Representatives
Washington, DC 20515

Dear Mr. Chairman:

This responds to your letter to the Attorney General dated December 8, 2017, requesting a list of guidance documents issued by components of the Department of Justice (Department) since January 1, 2008. We are sending identical responses to the other Members who joined your letter.

Gathering information to respond to this request has involved a substantial effort by the component members of the Department's Regulatory Reform Task Force (Task Force). Enclosed is a disc with an Excel multi-sheet workbook containing the respective lists of guidance documents from most of those components. However, certain components are still in the process of compiling and finalizing their list of guidance documents issued since 2008. We hope to supplement this response in the near future.

The Task Force component members have been directed to review these guidance documents and identify candidates for repeal, modification, or rescission in connection with the Task Force's work, which is ongoing.

We hope this information is helpful. Please do not hesitate to contact this office if we may provide additional assistance regarding this or any other matter.

Sincerely,

Stephen E. Boyd
Assistant Attorney General

Enclosure

cc: The Honorable Elijah E. Cummings
Ranking Member

Pistols Configured from Rifles: Rifles Configured from Pistols (Ruling 2011-4)	Ruling	Unassembled parts and configurations of parts of pistols, rifles, handguns or other weapons that result in a firearm as defined under the NFA, 26 U.S.C. 5845(a)(3); 26 U.S.C. 5845(a)(3) and (a)(4); 26 U.S.C. 5845(a)(3) and (a)(4); and 26 U.S.C. 5845(a)(4).	7/25/2011	ATF	No	No		No				https://www.atf.gov/firearms/docs/ruling/2011-4-pistols-configured-rifles-rifles-configured-pistols/download			
Alternate Locks Authorized for Explosives Magazines (Ruling 2011-3)	Ruling	ATF authorizes alternate use of hidden-shackle "hockey puck" locks, recessed padlocks, and padlocks with boron alloy shackles to secure explosives magazines, provided all of the requirements stated of this ruling have been met.	6/23/2011	ATF	No	No		No				https://www.atf.gov/explosives/docs/ruling/2011-3-alternate-locks-authorized-explosives-magazines/download			
Locking Requirements for Outdoor Type 5 Bin and Silo Magazines (Ruling 2011-2)	Ruling	ATF authorizes alternate storage for explosives licensees and permittees to store bulk blasting agents in outdoor type 5 bin or silo magazines without the specified locks provided all of the requirements stated in this ruling have been met.	2/18/2011	ATF	No	No		No				https://www.atf.gov/explosives/docs/ruling/2011-2-locking-requirements-outdoor-type-5-bin-and-silo-magazines/download			
Importers Consolidated Records (Ruling 2011-1)	Ruling	Approved alternate method or procedure for licensed importers to consolidate their records of importation or other acquisition of firearms and their separate firearms disposition records, provided all of the requirements stated in this ruling are met.	1/26/2011	ATF	No	No		No				https://www.atf.gov/firearms/docs/ruling/2011-1-importers-consolidated-records/download			

Manufacturing Operations May Be Performed by Licensed Gunsmiths Under Certain Conditions (Ruling 2010-10)	Ruling	Any person licensed as a dealer-gunsmith who repairs, modifies, embellishes, refurbishes, or installs parts in or on firearms (frames, receivers, or otherwise) for, or on behalf of a licensed importer or manufacturer, is not required to be licensed as a manufacturer under the Gun Control Act, provided the firearms are: (1) not owned, in whole or in part, by the dealer-gunsmith; (2) returned by the dealer-gunsmith to the importer or manufacturer upon completion of the manufacturing processes, and not sold or distributed to any person outside the	12/27/2010	ATF	No	No		No				https://www.atf.gov/firearms/docs/ruling/2010-10-manufacturing-operations-may-be-performed-licensed-gunsmiths-under/download			
Supporting Documentation for Import Permit Applications (Ruling 2010-9)	Ruling	Importers may submit photocopies of the original supporting statements and documents with ATF Form 6, if they certify, under penalties provided by law, that the supporting documentation is true, correct, and complete	11/30/2010	ATF	No	No		No				No hyperlink available b/c this document was superseded by Ruling 2013-1, which can be found at: https://www.atf.gov/firearms/docs/ruling/2013-1electronic-form-6and-6a/download			Superseded by ATF Ruling 2013-1
Consolidation of Records Required for Manufacturers (Ruling 2010-8)	Ruling	Approved alternate method or procedure for licensed manufacturers to consolidate their records of manufacture or other acquisition of firearms and their separate firearms disposition records, provided all of the conditions in this ruling are met.	12/6/2010	ATF	No	No		No				No hyperlink available b/c this document was superseded by Ruling 2016-3, which can be found at: https://www.atf.gov/firearms/docs/ruling/2016-3%E2%80%93consolidationrecords-requiredmanufacturers/download			Superseded by ATF Ruling 2016-3
Perforating Gun Storage (Ruling 2010-7)	Ruling	ATF authorizes alternate storage for explosives licensees and permittees to store loaded perforating guns outside of a locked magazine provided all of the requirements stated in this ruling are met.	11/24/2010	ATF	No	No		No				https://www.atf.gov/explosives/docs/ruling/2010-7-perforating-gun-storage/download			Previously numbered ATF Ruling 2009-4

State of Residence (Ruling 2010-6)	Ruling	For the purpose of acquiring firearms under the Gun Control Act, a U.S. citizen who temporarily resides in a foreign country, but also demonstrates the intention of making a home in a particular State, is a resident of the State during the time period he or she actually resides in that State. The intention must be demonstrated to a Federal firearms licensee by presenting valid identification documents.	11/10/2010	ATF	No	No		No				https://www.atf.gov/firearms/docs/ruling/2010-6-state-residence/download			
Identification of Maxim Side-Plate Receivers (Ruling 2010-3)	Ruling	The right side-plate of a Vickers/Maxim-type firearm, manufactured with its camming lobe affixed in the proper location, and without an ATF approved block that prevents installation of machinegun fire control components, is a machinegun receiver, and therefore, a machinegun as defined by the Gun Control Act and National Firearms Act (NFA). Provided it has not been disassembled into its component parts, a complete Vickers/Maxim-type machinegun that is currently registered in the National Firearms Registration and Transfer Record with its serial number located on a	9/28/2010	ATF	No	No		No				https://www.atf.gov/firearms/docs/ruling/2010-3-identification-maxim-side-plate-receivers/download			
Visibility of Marks on Explosives Containers Stored in Magazines (Ruling 2010-2)	Ruling	ATF authorizes alternate storage of containers of explosive materials in magazines so that marks are not visible, provided all of the requirements stated in this ruling are met	6/4/2010	ATF	No	No		No				https://www.atf.gov/explosives/docs/ruling/2010-2-visibility-marks-explosives-containers-stored-magazines/download			

Temporary Assignment of a Firearm by an FFL to an Unlicensed Employee (Ruling 2010-1)	Ruling	Requirements for temporary assignment of a firearm by an FFL to its unlicensed employees for bona fide business purposes, where the actual custody of the firearm is transferred for a limited period of time, and where title and control of the firearm remain with the FFL; and by an FFL to its unlicensed agents, contractors, volunteers, or any other person who is not an employee of the FFL, even for bona fide business purposes.	5/20/2010	ATF	No	No		No				https://www.atf.gov/firearms/docs/ruling/2010-1-temporary-assignment-firearm-ffl-unlicensed-employee/download			
Firearms Manufacturing Activities – Identification Markings of Firearms (Ruling 2009-5)	Ruling	Exception to marking requirements for licensed manufacturers who perform a manufacturing process on firearms for, or on behalf of, another licensed manufacturer, provided such firearms already have been properly marked with a serial number and other identifying markings required by 27 CFR 478.92(a) and 479.102(a), provided all other requirements stated in this ruling have been met.	11/9/2009	ATF	No	No		No				https://www.atf.gov/firearms/docs/ruling/2009-5-firearms-manufacturing-activities-identification-markings-firearms/download			
Storage of Explosives in Law Enforcement Explosives Response Vehicles (Ruling 2009-3)	Ruling	Under specific conditions, State and local bomb technicians and explosives response teams may store a limited amount of explosive materials within official response vehicles.	6/19/2009	ATF	No	No		No				https://www.atf.gov/explosives/docs/ruling/2009-3-storage-explosives-law-enforcement-explosives-response-vehicles/download			

Firearms Manufacturing Activities – Installation of Drop In Replacement Parts (Ruling 2009-2)	Ruling	Licensing requirements under the GCA for any person who installs “drop in” replacement parts in or on existing, fully assembled firearms. A “drop in” replacement part is one that can be installed in or on an existing, fully assembled firearm without drilling, cutting, or machining. A replacement part, whether factory original or otherwise, has the same design, function, substantially the same dimensions, and does not otherwise affect the manner in which the weapon expels a projectile by the action of an explosive.	1/12/2009	ATF	No	No		No				https://www.atf.gov/firearms/docs/ruling/2009-2-installation-drop-replacement-parts/download			
Firearms Manufacturing Activities – Camouflaging or Engraving Firearms (Ruling 2009-1)	Ruling	Licensing requirements under the Gun Control Act for persons engaging in the business, activity, or process that primarily adds to or changes a firearm's appearance, by camouflaging a firearm by painting, dipping, or applying tape, or by engraving the external surface of a firearm.	1/12/2009	ATF	No	No		No				https://www.atf.gov/firearms/docs/ruling/2009-1-firearms-manufacturing-activities-camouflaging-or-engraving-firearms/download			
Firearms- Use of electronic version of Form 4473 (Ruling 2008-3)	Ruling	Allowing licensees to use an electronic version of Form 4473 rather than the handwritten information.	11/19/2008	ATF	No	No		No				N/A because this document was superseded by 2016-2, which can be found at: https://www.atf.gov/firearms/docs/ruling/2016-2-%E2%80%93-electronic-atf-form-4473/download			
Firearms-Use of Computerized Records (Ruling 2008-2)	Ruling	Under specified conditions, approval was granted to utilize computerized records as required under regulations in 27 CFR	8/25/2008	ATF	No	No		No				N/A because this document was superseded by Ruling 2013-5, which in turn has been superseded by Ruling 2016-1, which can be found at: https://www.atf.gov/firearms/docs/ruling/2016-1-requirements-keep-firearms-records-electronically/download			

Disaster Preparedness for Federal Firearms Licensees (P 3317.7)	Publication - Firearms	Disaster preparedness is the process that an FFL takes to prepare for, minimize the effects of, and recover from an event that causes any disruption to its business.	12/1/2009	ATF	No	No		No				https://www.atf.gov/file/58666/download			
Do I need a license to buy or sell firearms? (P 5310.2)	Publication - Firearms	ATF guidance to help the public understand when those who buy and sell firearms must have a federal firearms license.	1/1/2016	ATF	No	No		No				https://www.atf.gov/file/100871/download			
Safety and Security for Firearm Owners (P 5300.22)	Publication - Firearms	The purpose of firearm safety is to eliminate or minimize the risks of unintentional damage, injury or death caused by improper possession, storage, or handling of a firearm. Firearm owners should handle the firearm safely and protect themselves and the public from the theft, loss or misuse of their firearm.	4/1/2016	ATF	No	No		No				https://www.atf.gov/file/103926/download			
National Tracing Center - eTrace - Internet-based Firearms Tracing and Analysis (P 3312.9)	Publication - Firearms	ATF provides a paperless firearm trace submission system that is readily accessible through the Internet known as eTrace. It provides the necessary utilities for submitting, retrieving, storing, and querying all firearms trace related information.	12/1/2009	ATF	No	No		No				https://www.atf.gov/file/11261/download			Revision of earlier publication
Police Officer's Guide to Recovered Firearms (P 3312.12)	Publication - Firearms	This guide provides basic information for law enforcement officers who recover firearms in the performance of their duties.	12/1/2009	ATF	No	No		No				https://www.atf.gov/file/58626/download			Revision of earlier publication
Personal Firearms Record (P 3312.8)	Publication - Firearms	By completing this record and maintaining it in a safe location, separate from your firearms, you will be taking an important first step in the effort to prevent thefts and to keep firearms out of the hands of criminals.	8/1/2013	ATF	No	No		No				https://www.atf.gov/firearms/docs/guide/personalfirearms-record-atfp-33128/download			Revision of earlier publication

Guidance for Requesting Marking Variances	Guidance - Firearms	Licensed manufacturers and importers are required to mark firearms manufactured or imported with specific identifying information. ATF may authorize other means of identification ("marking variance") upon receipt of a letter application from a licensed manufacturer or importer.	1/1/2011	ATF	No	No		No				https://www.atf.gov/file/11811/download			Revision of earlier publication
Guide to Standard Restriction Stamps for ATF Import Permit Applications	Guidance - Firearms	This document is intended to help familiarize you with the more common restrictions used on ATF Form 6 import permits for firearms, ammunition, and implements of war.	4/7/2011	ATF	No	No		No				https://www.atf.gov/file/86261/download			Revision of earlier publication
Safety and Security for Federal Firearms Licensees (P 3317.2)	Publication - Firearms	This booklet provides safety and security information for Federal firearms licensees and their businesses. In this booklet you will find information pertaining to ATF's stolen firearms program, steps for reducing your vulnerability to theft or loss, properly identifying and recording firearms information, recording suspicious person descriptions and how to report a theft or loss of firearms inventory.	2/1/2010	ATF	No	No		No				https://www.atf.gov/file/58656/download			revision of earlier publication
Loss Prevention for Firearms Retailers (P 5380.1)	Publication - Firearms	Loss prevention for firearms retailers. As a firearms retailer you have a risk of burglary, theft, and loss. This guide will help you evaluate the security of your premises and help you develop a strategy for preventing losses.	1/1/2016	ATF	No	No		No				https://www.atf.gov/file/109806/download			
How to Conduct a Firearms Inventory (P 5380.2)	Publication - Firearms	This publication provides guidelines on how to conduct a firearms inventory.	7/1/2016	ATF	No	No		No				https://www.atf.gov/file/107741/download			

Advisory Opinion on Licensing for Certain Gun Show Sellers	Open Letter - Firearms	This letter provides additional guidance on licensing for persons engaged in selling firearms at in-state gun shows.	2/18/2016	ATF	No	No		No				https://www.atf.gov/file/113616/download			
Best Practices: Transfers of Firearms by Private Sellers (P 5300.21)	Publication - Firearms	This publication provides best practices in regards to transfers of firearms by private sellers.	1/1/2013	ATF	No	No		No				https://www.atf.gov/file/58681/download			
Important Notice to FFLs and Other Participants at Gun Shows (I 5300.23A)	Notice	This notice applies to activities permitted at bona fide gun shows, as defined in Title 27 of the Code of Federal Regulations, Section 478.100. Federal firearms licensees ("FFLs" or "Dealers") may only sell firearms at gun shows within the State in which their licensed premise is located.	10/1/2016	ATF	No	No		No				https://www.atf.gov/file/56651/download			Revision of earlier publication
Youth Handgun Safety Act Notice (I 5300.2)	Notice	Federal law prohibits, except in certain limited circumstances, anyone under 18 years of age from knowingly possessing a handgun, or any person from selling, delivering, or otherwise transferring a handgun to a person under 18. A knowing violation of the prohibition against selling, delivering, or otherwise transferring a handgun to a person under the age of 18 is, under certain circumstances, punishable by up to 10 years in prison.	7/1/2017	ATF	No	No		No				https://www.atf.gov/file/58806/download			Revision of earlier publication
Curios or Relics List - Update January 2008 through June 2014	Publication - Firearms	Firearms automatically attain curio or relic (C&R) status when they are 50 years old. Any firearm that is at least 50 years old, and in its original configuration, would qualify as a C&R firearm. It is not necessary for such firearms to be listed in C&R list.	7/1/2014	ATF	No	No		No				https://www.atf.gov/file/102976/download			Addition to ATF P 5300.11, Firearms Curios or Relics List

Curios or Relics List - Update January 2009 through June 2010	Publication - Firearms	Firearms automatically attain curio or relic (C&R) status when they are 50 years old. Any firearm that is at least 50 years old, and in its original configuration, would qualify as a C&R firearm. It is not necessary for such firearms to be listed in C&R list.	7/1/2010	ATF	No	No		No				https://www.atf.gov/file/84376/download			Addition to ATF P 5300.11, Firearms Curios or Relics List
Department of Defense Contractor Inspections: ATF Inspection Process	Publication - Firearms	This document provides information on ATF's compliance inspection process and is intended to help Federal firearms or explosives licensees who are DOD contractors prepare for and participate in an ATF compliance inspection.	10/18/2017	ATF	No	No		No				https://www.atf.gov/file/121131/download			
Firearms Tracing Guide (P 3312.13)	Publication - Firearms	This booklet will help you understand the firearms trace process. It contains instructions on requesting a trace; understanding trace results; capabilities of comprehensive firearms tracing; and how to establish a tracing program.	3/1/2012	ATF	No	No		No				https://www.atf.gov/file/58631/download			
Recordkeeping and Background Check Procedures for Facilitation of Private Party Firearms Transfers (Procedure 2013-1)	Procedure	The purpose of this ATF procedure is to set forth the recordkeeping and National Instant Criminal Background Check System (NICS) procedures for Federal firearms licensees (FFLs) who facilitate the transfer of firearms between private unlicensed individuals. This procedure does not apply to pawn transactions, consignment sales, or repairs.	3/15/2013	ATF	No	No		No				https://www.atf.gov/file/88181/download			Superseded by Procedure 2017-1
NFA Handbook (ATF P 5320.8)	Publication - Firearms	Publication specifically geared to the NFA community comprised of 15 Chapters on manufacturing, importing and dealing in NFA weapons.	4/1/2009	ATF	No	No		No				https://www.atf.gov/firearms/national-firearms-act-handbook			Publication has been revised but not yet cleared for release.

Facilitating Private Sales: A Federal Firearms Licensee Guide	Guidance - Firearms	We've put together this guide to educate Federal firearms licensees (FFLs) on how to facilitate private party sales of firearms. When individuals decide to use FFLs to facilitate the private sale of their firearms, it can enhance public safety, assist law enforcement, and help ensure firearms end up only in the hands of those who are legally allowed to possess them.	no date	ATF	No	No		No				https://www.atf.gov/file/110076/download			
State Laws and Published Ordinances - Firearms (32nd Edition)	Reference Guide - Firearms	This webpage is to help Federal firearms licensees (FFL) comply with Federal and State firearms laws when making lawful over-the-counter sales transactions that must meet the legal requirements of both the FFL's and the purchaser's State of residence.	11/22/2017	ATF	No	No		No				https://www.atf.gov/firearms/state-laws-and-published-ordinances-firearms-32nd-edition			Revision of earlier publication
Scams Using Fraudulent or Manipulated NFA Registration Documents	Notice	ATF is advising the public to be aware of fraudulent National Firearms Act (NFA) tax registration forms being used to sell NFA firearms. Some individuals are presenting altered NFA Form 4's to prospective buyers in order to obtain a deposit, but never deliver the firearms.	6/5/2015	ATF	No	No		No				https://www.atf.gov/file/86686/download			
Facilitating Non-FFL Transfer of Firearms (Procedure 2017-1)	Procedure	The purpose of this ATF procedure is to set forth the recordkeeping and National Instant Criminal Background Check System (NICS) procedures for a Federal firearms licensee (FFL) who facilitates the transfer of firearms between private unlicensed individuals. This procedure does not apply to pawn transactions, consignment sales, or repairs.	7/28/2017	ATF	No	No		No				https://www.atf.gov/firearms/docs/ruling/atf-procedure-2017-1-facilitating-non-ffl-transfers-firearms/download			Updated Procedure 2013-1

Recordkeeping procedure for non-over-the-counter firearms sales by licensees to unlicensed in-state residents that are NICS exempt (Procedure 2013-2)	Procedure	This ATF procedure gives guidance to licensed importers, manufacturers, and dealers (licensees) on how to record the sale of a firearm to an unlicensed person who: a) Has a valid alternate permit or otherwise is exempt from National Instant Criminal Background Check System (NICS) requirements; b) Resides in the same state as the licensee; and c) Does not appear in person at the licensee's business premises.	8/15/2013	ATF	No	No		No				https://www.atf.gov/rules-and-regulations/docs/ruling/atf-proc-2013-2-recordkeeping-procedure-non-over-counter-firearm/download

Annual Firearms Manufacturing and Exportation Report Under 18 U.S.C. Chapter 44, Firearms - ATF Form 5300.11	Information Collections	The information collected is used to compile statistics on the manufacture and exportation of firearms. The furnishing of this information is mandatory under 18 U.S.C. 923(g)(5)(A). This form must be submitted annually for every Type 07 and Type 10 Federal Firearms License (FFL), even if no firearms were exported or distributed from the licensee.	7/27/2017	ATF	No	Yes		No				https://www.atf.gov/file/61481/download	1140-0017		
Appeals of Background Checks	Information Collections	This collection allows responsible person or employee to challenge an adverse background check determination by submitting appropriate documentation to the ATF.	5/3/2016	ATF	No	Yes		No			For background, see: 81 FR 13831 (Mar 15 2016)	N/A because there is no Form for this IC	1140-0081		
Application and Permit for Importation of Firearms, Ammunition and Defense Articles - ATF Form 6 Part I (5330.3A)	Information Collections	The application and subsequent permit are used to bring firearms, ammunition and defense articles into the United States.	10/31/2016	ATF	No	Yes		No				https://www.atf.gov/file/11381/download	1140-0005		

Application and Permit for Importation of Firearms, Ammunition and Implements of War - ATF Form 6 Part II (5330.3B)	Information Collections	The form is used to determine if the article(s) described on the application qualifies for importation by the importer, and to serve as the authorization for the importer. In addition, information may be disclosed to other Federal, State, foreign and local law enforcement and regulatory agency personnel to verify information on the application, and to aid in the performance of their duties with respect to the enforcement and regulation of firearms and/or ammunition where such disclosure is	6/1/2016	ATF	No	Yes		No				https://www.atf.gov/file/11376/download	1140-0006		
Application and Permit for Permanent Exportation of Firearms (National Firearms Act) - ATF Form 9 (5320.9)	Information Collections	ATF Form 9 (5320.9) is typically used by a Federal firearms licensee who has paid the special (occupational) tax to deal, manufacture or import NFA firearms. The form must be filed (in quadruplicate) for approval to permanently export NFA firearms registered in the National Firearms Registration and Transfer Record. Once authorization has been granted, one copy is retained by ATF and the remaining copies returned to the exporter to establish that the exportation took place and claim relief from liability for the transfer tax.	1/6/2017	ATF	No	Yes		No				https://www.atf.gov/file/11351/download	1140-0008		
Application and Permit for Temporary Importation of Firearms and Ammunition by Nonimmigrant Aliens - ATF Form 6NIA (5330.3D)	Information Collections	The form allows nonimmigrant aliens to temporarily import firearms and ammunition into the United States for hunting or other sporting purposes	11/7/2014	ATF	No	Yes		No				https://www.atf.gov/resource-center/docs/atf-f-5330-3dpdf/download	1140-0084		

Application for Alternate Means of Identification of Firearms (Marking Variance) - ATF Form 3311.4	Information Collections	The ATF Form 3311.4 provides a uniform mean for industry members with a valid Federal importer or manufacturer license, to request firearms marking variance	4/19/2017	ATF	No	Yes		No				https://www.atf.gov/file/114486/download	1140-0104		
Application for An Amended Federal Firearms License - ATF Form 5300.38	Information Collections	The Gun Control Act requires that each person applying for a Federal Firearms License (FFL) change of address must certify compliance with the provisions of the law for the new address. The ATF F 5300.38, Application for an Amended Federal Firearms License is the application method used by existing Federal Firearms licensees to change the business address of the license and certify compliance. Licensees are required to notify ATF of the intent to move any business premises no later than 30 days prior to the intended move.	12/1/2016	ATF	No	Yes		No				https://www.atf.gov/file/11326/download	1140-0040		
Application for Explosives License or Permit - ATF Form 5400.13/5400.16	Information Collections	Chapter 40, Title 18, U.S.C., provides that any person engaged in the business of explosive materials as a dealer, manufacturer, or importer shall be licensed (18 U.S.C. 842(a)(1).	9/13/2016	ATF	No	Yes		No				https://www.atf.gov/file/61596/download	1140-0070		

Application for Federal Firearms License - ATF Form 7 (5310.12)/ 7CR (5310.16)	Information Collections	The law of 18 U.S.C. Section 923(a)(1), requires a person wishing to transport, ship, or receive firearms in interstate or foreign commerce to pay a fee, to file an application and to obtain a license before engaging in business. ATF F 5310.12/7 CR 5310.16 will be for the purpose of ensuring this collection of information is necessary to insure that the person who wishes to be licensed as required by Section 923 meets the requirements of the section for the license. Additionally, this form will be used by the public when applying for a Federal firearms license to collect curios and relics	9/12/2017	ATF	No	Yes		No				https://www.atf.gov/file/61506/download	1140-0018		
Application for National Firearms Examiner Academy - ATF Form 6330.1	Information Collections	The Information requested on this form is necessary to process requests from prospective students to attend the ATF National Firearms Examiner Academy, and to acquire firearms and toolmark examiner training. The information collection is used to determine the eligibility of the applicant.	7/27/2017	ATF	No	Yes		No				https://www.atf.gov/file/61631/download	1140-0049		
Application for Registration of Firearms Acquired by Certain Governmental Entities - ATF Form 10 (5320.10)	Information Collections	The ATF Form 10 (5320.10) is used to allow State and local government agencies to register otherwise unregistrable National Firearms Act (NFA). The NFA requires the registration of certain firearms under Federal Law. The Form 10 registration, which is for official use only by the agency, allows State and local agencies to retain and use firearms which otherwise would have to be destroyed and comply with the NFA.	5/15/2017	ATF	No	Yes		No				https://www.atf.gov/file/11336/download	1140-0016		

Application for Restoration of Firearms Privileges - ATF Form 3210.1	Information Collections	The information requested is collected to fulfill the requirements of 18 U.S.C. Chapter 44. Under Federal law, individuals prohibited from purchasing, possessing, receiving, or transporting firearms are permitted to apply for restoration of their firearms privileges. The information to be supplied must identify the specifics of the applicant's appeal for restoration of privileges. The information is investigated, processed, examined, and stored initially at ATF Headquarters.	7/10/2017	ATF	No	Yes		No				https://www.atf.gov/file/83701/download	1140-0002		
Application for Tax Exempt Transfer and Registration of Firearm - ATF Form 5 (5320.5)	Information Collections	This form is filed to obtain permission to make and transfer a National Firearms Act (NFA) firearm. Transfer without approval and possession of an unregistered NFA firearm are illegal. The approval of the application effectuates the registration of a firearm to the transferee. The transferee claims an exemption from the transfer tax by filing this application.	7/16/2016	ATF	No	Yes		No				https://www.atf.gov/file/11371/download	1140-0015		

Application for Tax Paid Transfer and Registration of Firearm - ATF Form 4 (5320.4)	Information Collections	This form is filed to obtain permission to transfer and register a National Firearms Act (NFA) firearm. A transfer without approval and possession of an unregistered NFA firearm are illegal. The approval of the application effectuates the registration of a firearm to the transferee. There is a tax of \$5 or \$200 on the transfer of an NFA firearm with certain exceptions (see ATF Forms 3 and 5 for tax exempt transfer information).	9/12/2017	ATF	No	Yes		No				https://www.atf.gov/file/61546/download	1140-0014		
Application for Tax-Exempt Transfer of Firearm and Registration to Special Occupational Taxpayer - ATF Form 3 (5320.3)	Information Collections	This form is used to transfer National Firearms Act (NFA) regulated items between Federal firearms licensees (FFL)/Special Occupational Tax (SOT) payers to be exempted from the transfer tax incurred for each item.	7/10/2017	ATF	No	Yes		No				https://www.atf.gov/file/11281/download	1140-0013		
Application to Make and Register a Firearm - ATF Form 1 (5320.1)	Information Collections	This form is filed to obtain permission to make and register a National Firearms Act (NFA) firearm. Possession of an unregistered NFA firearm is illegal. The approval of the application effectuates the registration of the firearm to the applicant. For any person other than a government agency, the making incurs a tax of \$200.	7/26/2017	ATF	No	Yes		No				https://www.atf.gov/file/11281/download	1140-0011		
Application to Register as an Importer of U.S. Munitions Import List Articles - ATF Form 4587 (5330.4)	Information Collections	The purpose of this information collection is to allow ATF to determine if the registrant qualifies to engage in the business of importing a firearm or firearms, ammunition, and the implements of war, and to facilitate the collection of registration fees.	5/27/2016	ATF	No	Yes		No				https://www.atf.gov/file/11341/download	1140-0009		

Application to Transport Interstate or Temporarily Export Certain National Firearms Act (NFA) Firearms - ATF Form 5320.20	Information Collections	Certain National Firearms Act firearms may not be transported interstate or temporarily exported by any person, other than a qualified Federal firearms licensee, without approval from ATF. The regulation requires a written request and this form provides for the regulatory requirements and may be used as a written request.	8/8/2016	ATF	No	Yes		No				https://www.atf.gov/file/11361/download	1140-0010		
Arson & Explosives Registration Training Request - ATF Form 6310.1	Information Collections	The form is used to obtain information from Federal, State and local, and international law enforcement, and military investigator personnel applying for training conducted by ATF, for the purpose of student registration, program information and program evaluation. The information on the form will be used to determine the eligibility of the applicant to attend the training.	1/14/2015	ATF	No	Yes		No				https://www.atf.gov/file/3401/download	1140-0106		
ATF Adjunct Instructor Data Form - ATF Form 6140.3	Information Collections	The information collected on ATF F 6140.3 will provide ATF with sufficient data to uniquely identify individual instructors, validate instructor topical expertise prior to training, and defend an instructor's qualifications in court regarding topical expertise.	6/29/2017	ATF	No	Yes		No				https://www.atf.gov/n/sites/default/files/media/2017/04/f_6140.3.pdf	1140-0099		
ATF Distribution Center Survey - ATF Form 1370.4	Information Collections	The form is used to evaluate the ATF Distribution Center, and the services it provides to the users of ATF forms and publications.	5/18/2017	ATF	No	Yes		No				https://www.reginfo.gov/public/do/DownloadDocument?objectID=34070801	1140-0001		

Certification of Qualifying State Relief from Disabilities Program - ATF Form 3210.12	Information Collections	This form is to be used by a State to certify to the U.S. Department of Justice, Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) that it has established a qualifying mental health relief from firearms disabilities program that satisfies certain minimum criteria established by the NICS Improvement Amendment Act of 2007, Public Law 110-180, Section 105, enacted January 8, 2008 (NIAA). This certification is required for States to be eligible for certain grants authorized by the NIAA.	5/27/2016	ATF	No	Yes		No				https://www.atf.gov/file/11731/download	1140-0094		
Certification on Agency Letterhead Authorizing Purchase of Firearm for Official Duties of Law Enforcement Officer	Information Collections	Law enforcement officers must use the letter when purchasing firearms to be used in his/her official duties from a licensed firearm dealer in the United States. The letter shall state that the officer will use the firearm in official duties and that a records check reveals that the purchasing officer has no convictions for misdemeanor crimes of domestic violence.	12/21/2016	ATF	No	Yes		No			For background, see: 80 FR 9715 (Feb. 24 2015)	N/A because there is no Form	1140-0046		
eForm 6 Access Request	Information Collections	Respondents must complete the eForm Access Request form in order to receive a user ID and password to obtain access to ATF's eForm System. The information is used by the Government to verify the identity of the end users prior to issuing passwords	5/22/2015	ATF	No	Yes		No			For background, see: 80 FR 16029 (Mar. 26 2015)	N/A because there is no Form	1140-0087		

Employee Possessor Questionnaire - ATF Form 5400.28	Information Collections	Each employee possessor in the explosives business or operations required to ship, transport, receive, or possess (actual or constructive), explosive materials must submit this form. The form will be submitted to ATF to determine whether the person who provided the information is qualified to be an employee possessor in an explosive business.	5/15/2015	ATF	No	Yes		No				https://www.atf.gov/file/11406/download	1140-0072		
Environmental Information - ATF Form 5000.29	Information Collections	The data provided by the applicant on ATF F 5000.29, Environmental Information, allows ATF to identify any waste product(s) generated as a result of the operations by the applicant and the disposal of the products. The information is then reviewed in order to determine if there is any adverse impact on the environment. Information may be disclosed to other Federal, State and local law enforcement and regulatory personnel to verify information on the form and to aid in the enforcement of environmental laws.	11/1/2016	ATF	No	Yes		No				https://www.atf.gov/file/61456/download	1140-0096		
Federal Explosives License/Permit (FEL) Renewal Application - ATF Form 5400.14/5400.15 Part III	Information Collections	The form is used for the renewal of an explosive license or permit. The renewal application is used by ATF to determine that the applicant remains eligible to retain the license or permit. The change to the form is to add instructions that ATF Form 5400.28 must be completed for all EP's that are active on the Federal Explosives License (FEL), both current and new EP's.	6/30/2015	ATF	No	Yes		No				https://www.atf.gov/resource-center/docs/atf-form-540014-540015-part-iii-omb-1140-0022pdf/download	1140-0022		

Federal Firearms License (FFL) RENEWAL Application - ATF Form 8 (5310.11) Part II	Information Collections	The form is filed by the licensee desiring to renew a Federal firearms license. It is used to identify the applicant, locate the business/collection premises, identify the type of business/collection activity, and determine the eligibility of the applicant.	10/23/2017	ATF	No	Yes		No				https://www.reginfo.gov/public/do/DownloadDocument?objectID=47003601	1140-0019		
Federal Firearms Licensee Firearms Inventory Theft/Loss Report - ATF Form 3310.11	Information Collections	This form requires that licensees report the theft or loss of firearms to the Attorney General and the appropriate authorities.	10/23/2017	ATF	No	Yes		No				https://www.atf.gov/file/61331/download	1140-0039		
FEL Out of Business Records	Information Collections	Per 27 CFR 555.128 where an explosive materials business or operations is discontinued the records must be delivered within 30 days following the business or operations discontinuance to the ATF Out of Business Records Center, 244 Needy Road, Martinsburg, WV 25405.	9/1/2016	ATF	No	Yes		No				N/A because there is no Form. This IC allows ATF to receive out of business records submitted by licensees that are going out of business	1140-0102		
FFL Out of Business Records Request - ATF Form 5300.3A	Information Collections	The form is used by ATF to notify licensees that go out of business to send their firearms related business records to the ATF, if the business discontinuance is absolute, or to allow the licensee to notify ATF of the successor who will be maintaining control of their firearms related records. The questions are simple and a return address is supplied. The format is easy for the user to list the required information ATF needs to perform its functions in regard to the law.	7/24/2017	ATF	No	Yes		No				https://www.reginfo.gov/public/do/DownloadDocument?objectID=11378701	1140-0036		

Firearms and Explosives Services Division Customer Service Survey	Information Collections	The Firearms & Explosives Services Division (FESD) provides dealer licensing and other services related to the importation and transfers of weapons within the firearms and explosives industry. This anonymous survey allows FESD to gauge customer satisfaction, correct potential deficiencies, and improve overall customer satisfaction.	9/30/2015	ATF	No	Yes		No			For background, see: 80 FR 29749 (May 22 2015)	N/A because there is no Form for this IC	1140-0101		
Firearms Disabilities for Nonimmigrant Aliens	Information Collections	The nonimmigrant alien information will be used to determine if a nonimmigrant alien is eligible to purchase, obtain, possess, or import a firearm.	6/30/2015	ATF	No	Yes		No			For background, see: 80 FR 16438 (Mar 27 2015)	N/A	1140-0060		
Firearms Transaction Record/ Registro de Transacción de Armas de Fuego - ATF Form 4473 (5300.9)	Information Collections	The information and certification on the Form 4473 are designed so that a person licensed under 18 U.S.C. 923 may determine if he or she may lawfully sell or deliver a firearm to the person identified in Section A. It also alerts buyers to certain restrictions on the receipt and possession of firearms.	10/4/2017	ATF	No	Yes		No				https://www.atf.gov/file/61446/download	1140-0020		
Furnishing of Samples	Information Collections	ATF requires licensed manufacturers and importers and persons who manufacture or import explosives materials or ammonium nitrate to submit samples at the request of the Director.	3/30/2016	ATF	No	Yes		No				N/A. This IC allows ATF to receive explosive materials samples submitted by certain licensees.	1140-0073		

Identification Markings Placed on Firearms	Information Collections	Each licensed firearms manufacturer or licensed firearms importer must legibly identify each firearm by engraving, casting, stamping (impressing), or otherwise conspicuously placing on the frame or receiver an individual serial number. Also, ATF requires minimum height and depth requirements for identification markings placed on firearms.	7/6/2015	ATF	No	Yes		No			For background see: 80 FR 26712 (May 5, 2015)	N/A because there is no Form.	1140-0050		
Identification of Explosive Materials	Information Collections	Marking of explosives enables law enforcement entities to more effectively trace explosives from the manufacturer through the distribution chain to the end purchaser. This process is used as a tool in criminal enforcement activities.	10/31/2016	ATF	No	Yes		No			For background, see: 81 FR 36584 (Jun 7 2016)	N/A because there is no Form.	1140-0055		
Identification of Imported Explosives Materials	Information Collections	The information is necessary to ensure that explosive materials can be effectively traced. All licensed importers are required to identify by marking all explosive materials they import for sale or distribution. The process provides valuable information in explosion and bombing investigations.	7/28/2015	ATF	No	Yes		No			For background, see: 80 FR 29338 (May 21 2015)	N/A because there is no Form.	1140-0062		
Interstate Firearms Shipment Theft/Loss Report- ATF Form 3310.6	Information Collections	27 CFR part 478 of Federal Regulations requires Federal Firearms Licensees' who discovers a firearm it shipped was stolen or lost in transit, the transferor/sender FFL must report the theft or loss to ATF and to the appropriate local authorities within 48 hours of discovery on ATF Form 3310.11.	10/4/2016	ATF	No	Yes		No				https://www.atf.gov/file/11311/download	1140-0004		

Inventories, Licensed Explosives Importers, Manufacturers, Dealers, and Permittees	Information Collections	The records show the explosive material inventories of those persons engaged in various activities within the explosive industry and are used by the government as initial figures from which an audit trail can be developed during the course of a compliance inspection or criminal investigation.	7/10/2017	ATF	No	Yes		No				N/A because there is no Form as licensees maintain records that show their explosive material inventories that are viewable by inspectors during the course of a compliance inspection or criminal investigation.	1140-0028		
Investigator Integrity Questionnaire - ATF Form 8620.7	Information Collections	ATF utilizes the services of contract investigators to conduct security/suitability investigations on prospective or current employees, as well as those contractors and consultants doing business with ATF. Persons interviewed by contract investigators will be randomly selected to voluntarily complete a questionnaire regarding the investigator's degree of professionalism.	1/2/2015	ATF	No	Yes		No				https://www.atf.gov/n/sites/default/files/media/2017/11/draft_atf_form_8620.7.pdf	1140-0058		
Licensed Firearms Manufacturers Records of Production, Disposition, and Supporting Data	Information Collections	Firearms manufacturers' records are permanent records of all firearms manufactured and records of their disposition. These records are vital to support ATF's mission to inquire into the disposition of any firearm in the course of a criminal investigation.	6/3/2015	ATF	No	Yes		No			For background, see: 80 FR 3253 (Jan 22 2015)	N/A because there is no Form for this IC	1140-0067		
Limited Permittee Transaction Report - ATF Form 5400.4	Information Collections	The purpose of this collection is to enable ATF to determine whether limited permittees have exceeded the number of receipts of explosives materials they are allowed and to determine the eligibility of such persons to purchase explosive materials.	5/27/2016	ATF	No	Yes		No				https://www.atf.gov/file/61616/download	1140-0025		

List of Responsible Persons	Information Collections	All persons holding ATF explosives licenses or permits must report any change in responsible persons or employees authorized to possess explosive materials to ATF. Such report must be submitted within 30 days of the change and must include appropriate identifying information for each responsible person.	1/11/2016	ATF	No	Yes		No				This IC is part of the Application for Explosives License or Permit, see p.2: https://www.atf.gov/file/61596/download	1140-0074		
Manufacturers of Ammunition, Records and Supporting Data of Ammunition Manufactured and Disposed of	Information Collections	ATF uses manufacturer's records information during investigations, inspections for criminal activity, or for compliance purposes.	4/29/2016	ATF	No	Yes		No			For background, see: 80 FR 77022 (Dec 11 2015)	N/A because there is no Form for this IC	1140-0066

Special Tax Registration and Return National Firearms Act (NFA)-ATF Form 5630.7	Information Collections	ATF F 5630.7, NFA Special Tax Registration and Return National Firearms Act is completed and returned by businesses that are subject to Special Occupational Taxes under the National Firearms Act for either initial tax payment or business information changes. This form serves as both a return and a business registration. ATF F 5630.5R, NFA Special Tax Renewal Registration and Return and ATF F 5630.5RC, NFA Special Tax Location Registration Listing are preprinted forms sent to taxpayers for Special Occupation Taxes under the National Firearms Act. Taxpayers validate/correct the	7/27/2017	ATF	No	Yes		No				https://www.atf.gov/firearms/docs/form/special-tax-registration-and-return-national-firearms-act-nfa-atf-form-56307/download	1140-0090		

National Firearms Act Responsible Person Questionnaire - ATF Form 5320.23	Information Collections	This form is filed with ATF Form 1, 4 or 5 applications when the applicant, maker, or transferee is other than an individual or government agency. This allows ATF to conduct background checks of persons who make, acquire, or possess firearms.	7/18/2016	ATF	No	Yes		No				https://www.atf.gov/firearms/docs/form/national-firearms-act-nfa-responsible-person-questionnaire-532023/download	1140-0107		
National Response Team Customer Satisfaction Survey	Information Collections	The National Response Team (NRT) survey is used to support a Bureau performance measure and to assess strengths and weaknesses of a major program of the Bureau of Alcohol, Tobacco, Firearms and Explosives.	10/4/2016	ATF	No	Yes		No			For background, see: 81 FR 25714 (Apr 29 2016)	N/A because this IC is to support internal agency matters.	1140-0091		
National Tracing Center Trace Request - ATF Form 3312.1	Information Collections	The ATF Form 3312.1 is used by Federal, State, local and certain foreign law enforcement officials to request that the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) trace firearms used or suspected to have been used in crimes.	8/15/2016	ATF	No	Yes		No				https://www.atf.gov/firearms/docs/form/national-tracing-center-trace-request-atf-form-33121/download	1140-0043		
Notice of Firearms Manufactured or Imported - ATF Form 2 (5320.2)	Information Collections	The ATF Form 2 (5320.2) is required of (1) a person who is qualified to manufacture National Firearms Act (NFA) firearms, or (2) a person who is qualified to import NFA firearms to register manufactured or imported NFA firearm(s).	5/9/2017	ATF	No	Yes		No				https://www.atf.gov/file/11746/download	1140-0012		

Notification of Change of Mailing or Premise Address	Information Collections	Per 27 CFR 555.54, licensees and permittees whose mailing address will change, must notify the Chief, Federal Explosives Licensing Center, at least 10 days before the change. This information collection will be used by the ATF to identify the correct location of both explosives licensees/permittees, and the address where their explosive materials are being stored, for purposes of inspection. This information will also be used to notify permittee/licensees about any changes in regulation or law that may affect their business activities.	12/21/2017	ATF	No	Yes		No			For background, see: 80 FR 29747 (May 22 2015)	N/A because this IC allows ATF to receive information from licensees who change their address.	1140-0080		
Notification to Fire Safety Authority of Storage of Explosive Materials	Information Collections	The information is necessary for the safety of emergency response personnel responding to fires at sites where explosives are stored. The information is provided both orally and in writing to the authority having jurisdiction for fire safety in the locality in which explosives are stored.	9/30/2015	ATF	No	Yes		No			For background, see: 80 FR 29747 (May 22 2015)	N/A because there is no Form for this IC	1140-0071		
Police Check Inquiry - ATF Form 8620.42	Information Collections	The information requested is necessary to determine if individuals (potential contractors, task force officers, and volunteers) interested in providing services to ATF meet DOJ and ATF basic qualification requirements to be considered for access to ATF information, information technology systems, and/or facilities.	1/13/2015	ATF	No	Yes		No				https://www.atf.gov/file/11416/download	1140-0068		

Prevent All Cigarette Trafficking (PACT) Act Registration Form - ATF Form 5070.1	Information Collections	The form is required for any person who sells, transfers, or ships for profit cigarettes or smokeless tobacco in interstate commerce, whereby such cigarettes or smokeless tobacco are shipped into a State, locality, or Indian country of an Indian tribe taxing the sale or use of cigarettes or smokeless tobacco, or who advertises or offers cigarettes or smokeless tobacco for such a sale, transfer, or shipment, shall file first with the Attorney General of the	7/10/2017	ATF	No	Yes		No				https://www.atf.gov/file/61471/download	1140-0098

Records and Supporting Data: Importation, Receipt, Storage, and Disposition by Explosives Importers, Manufacturers, Dealers, and Users Licensed Under Title 18 U.S.C. Chapter 40 Explosives	Information Collections	The records show daily activities in the importation, manufacture, receipt, storage, and disposition of all explosive materials covered under 18 U.S.C. Chapter 40 Explosives. The records are used to show where and to whom explosive materials are sent, thereby ensuring that any diversions will be readily apparent, and if lost or stolen, ATF will be immediately notified.	1/30/2015	ATF	No	Yes		No			For background, see: 82 FR 61326 (Dec 27 2017)	N/A because there is no Form.	1140-0030		

Records of Acquisition and Disposition, Collection of Firearms	Information Collections	The recordkeeping requirement for this collection is primarily to facilitate ATF's authority to inquire into the disposition of any firearm during the course of a criminal investigation.	5/15/2017	ATF	No	Yes		No				N/A because there is no Form. Licensees maintain their own records as required by regulation. ATF is permitted to review these records during compliance or during criminal investigation.	1140-0032		
Records of Acquisition and Disposition, Registered Importers of Arms, Ammunition & Implements of War on the U.S. Munitions Import List	Information Collections	The records are of imported items that are on the United States Munitions Import List. The importers must register with ATF and must file an intent to import specific items as well as certify to the Bureau that the items were in fact received. The records are maintained at the registrant's business premises where they are available for inspection by ATF officers during compliance inspections or criminal investigations.	6/3/2015	ATF	No	Yes		No			For background, see: 80 FR 3252 (Jan 22 2015)	N/A because there is no Form for this IC	1140-0031		
Release and Receipt of Imported Firearms, Ammunition and Defense Articles - ATF Form 6A (5330.3C)	Information Collections	The data provided by this information collection request is used by ATF to determine if articles imported meet the statutory and regulatory criteria for importation, and if the articles shown on the permit application have been imported.	1/4/2018	ATF	No	Yes		No				https://www.atf.gov/file/11356/download	1140-0007		
Relief of Disabilities and Application for Restoration of Explosives Privileges (ATF Form 5400.29)	Information Collections	Persons who wish to ship, transport, receive, or possess explosive materials, but are prohibited from doing so, will complete this form. The form will be submitted to ATF to determine whether the person who provided the information is likely to act in a manner dangerous to public safety and that the granting of relief is not contrary to the public interest.	7/10/2017	ATF	No	Yes		No				https://www.atf.gov/file/11391/download	1140-0076		

Report of Firearms Transactions - ATF Form 5300.5	Information Collections	The information collection documents transactions of firearms for law enforcement purposes. ATF uses the information to determine that the transaction is in accordance with laws and regulations, and establishes the person(s) involved in the transactions.	6/3/2015	ATF	No	Yes		No				https://www.atf.gov/file/11736/download	1140-0024		
Report of Multiple Sale or Other Disposition of Certain Rifles - ATF Form 3310.12	Information Collections	The purpose of this information collection is to continue a requirement that Federal firearms licensees report multiple sales or other dispositions whenever the licensee sells or otherwise disposes of two or more rifles to the same person at one time or within any five consecutive business days with the following characteristics: (a) Semi-automatic; (b) a caliber greater than .22; and (c) the ability to accept a detachable magazine. This requirement will apply to Federal Firearms Licensees (FFLs) who are dealers and/or pawnbrokers in Arizona, California, New Mexico	11/19/2014	ATF	No	Yes		No				https://www.atf.gov/file/61421/download	1140-0100		
Report of Multiple Sale or Other Disposition of Pistols and Revolvers - ATF Form 3310.4	Information Collections	The information documents certain sales or other dispositions of handguns for law enforcement purposes and determines if the buyer is involved in an unlawful activity, or is a person prohibited by law from obtaining firearms.	6/29/2015	ATF	No	Yes		No				https://www.atf.gov/file/61426/download	1140-0003		

Report of Stolen or Lost Intrastate Explosive – ATF Form 5400.30	Information Collections	When any Intrastate Purchase of Explosives Coupon is stolen, lost or destroyed, the person losing possession will, upon discovery of the theft, loss or destruction, immediately, but in all cases before 24 hours have elapsed since discovery, report the matter to the Director, Alcohol, Tobacco, Firearms and Explosives.	5/3/2016	ATF	No	Yes		No				N/A because there is no Form for this IC	1140-0077		
Report of Theft or Loss of Explosives - ATF Form 5400.5	Information Collections	According to 27 CFR 555.30(a) Any licensee or permittee who has knowledge or theft or loss of any explosive materials from his stock shall, within 24 hours of discovery, report the theft or loss by telephoning 1-800-800-3855 (nationwide toll free number) and on ATF F 5400.5, Report of Theft or Loss of Explosives, in accordance with the instructions on the form.	11/21/2016	ATF	No	Yes		No				https://www.atf.gov/file/11401/download	1140-0026		
Request for ATF Background Investigation Information - ATF Form 8620.65	Information Collections	This form is necessary to maintain a record of another agency's official request for an individual's background investigation record. The documented request will assist the ATF in ensuring that unauthorized disclosures of information do no occur.	4/19/2017	ATF	No	Yes		No				https://www.atf.gov/file/11476/download	1140-0105		

Special Agent Medical Preplacement - ATF Form 2300.10	Information Collections	The ATF F 2300.10 Special Agent Medical Preplacement form is used by special agents and explosives enforcement officers who are applying for a specific criminal investigator or explosives enforcement officer position with ATF. This position has specific medical standards and physical requirements. The information on the form is used to determine medical suitability for the position.	4/19/2017	ATF	No	Yes		No				https://www.reginfo.gov/public/do/DownloadDocument?objectID=71786601	1140-0056		
Strategic Planning Environmental Assessment Outreach	Information Collections	The Office of Strategic Management at ATF will use the information to help identify and validate the agency's internal strengths and weaknesses.	1/11/2016	ATF	No	Yes		No				N/A. This is an IC for internal agency matters."	1140-0052		
Student and Supervisor Training Validation Surveys	Information Collections	Collection of this information will help ATF determine whether the training program is consistently meeting objectives and impacting the performance of the individuals in their work place.	4/4/2016	ATF	No	Yes		No				N/A. This is an IC for internal agency matters."	1140-0095		
Supplemental Information on Water Quality Considerations - ATF Form 5000.30	Information Collections	The data provided by the applicant on ATF F 5000.30, Supplemental Information on Water Quality Considerations, allows the ATF to identify waste product(s) generated as a result of explosives operations, the disposal of these products into navigable waters, and if there is any adverse impact on the environment. The information may be disclosed to other Federal, State, and local law enforcement and regulatory personnel, in order to verify information on the form and aid in the enforcement of environmental laws.	5/15/2017	ATF	No	Yes		No				https://www.atf.gov/file/11321/download	1140-0097		

Transactions Among Licensee/Permittees and Transactions Among Licensees and Holders of User Permits	Information Collections	The Safe Explosives Act requires an explosives distributor must verify the identity of the purchaser; an explosives purchaser must provide a copy of the license/permit to distributor prior to the purchase of explosive materials; possessors of explosive materials must provide a list of explosives storage locations; purchasers of explosive materials must provide a list of representatives authorized to purchase on behalf of the distributee; and an explosive purchaser must provide a statement of intended use for the	9/30/2015	ATF	No	Yes		No			For background, see: 80 FR 29748 (May 22 2015)	N/A because there is no Form for this IC	1140-0079		
Transactions Among Licensees/Permittees, Limited	Information Collections	Specific requirements for licensees and permittees regarding limited explosive permits are outlined in this information collection. The transactions are stated in #1. of this supporting statement. This information will be used by ATF to implement the provisions of the Safe Explosives Act.	5/3/2016	ATF	No	Yes		No			For background, see 77 FR 75661 (Dec 21 2012)	N/A because there is no Form for this IC	1140-0075		
Voluntary Magazine Questionnaire for Agencies/Entities Who Store Explosive Materials	Information Collections	The purpose of the form is to identify the number and locations of public explosives storage facilities (magazines), including those facilities used by State and local law enforcement.	4/29/2016	ATF	No	Yes		No			For background, see: 80 FR 78767 (Dec 17 2015)	N/A because there is no Form for this IC	1140-0092		

ATF Procedure 75-4	Procedure	Description of Explosive Storage Facility	1975	ATF	No	No		No		Yes- rescinded		N/A because this Procedure was rescinded because its content was incorporated into the Application for Explosives License or Permit. Appendix I

Department of Labor

U.S. Department of Labor

Assistant Secretary for
Congressional and Intergovernmental Affairs
Washington, D.C. 20210

FEB 01 2018

The Honorable Trey Gowdy
Chairman
Committee on Oversight and Government Reform
U.S. House of Representatives
Washington, D.C. 20515

Dear Chairman Gowdy,

Thank you for your December 8, 2017 letter to Secretary of Labor R. Alexander Acosta requesting a list of all guidance documents issued by the Department since January 1, 2008. Your letter was forwarded to the Office of Congressional and Intergovernmental Affairs for response.

As you know, the President's Executive Orders (E.O.) 13771 and 13777 focus on reducing regulatory burdens that eliminate jobs, or inhibit job creation; are outdated, unnecessary, or ineffective; impose costs that exceed benefits; create a serious inconsistency or otherwise interfere with regulatory reform initiatives and policies; are not publicly available or that are insufficiently transparent to meet the standard for reproducibility; or derive from or implement Executive Orders or other Presidential directives that have been subsequently rescinded or substantially modified.

Specifically, Sec. 3 of E.O. 13771 provides that the Regulatory Reform Task Forces "shall evaluate existing regulations (as defined in section 4 of Executive Order 13771) and make recommendations to the agency head regarding their repeal, replacement, or modification, consistent with applicable law." Sec. 4 of E.O. 13771, with a few exceptions for categories such as national security, defines "regulation" or "rule" as "an agency statement of general or particular applicability and future effect designed to implement, interpret, or prescribe law or policy or to describe the procedure or practice requirements of an agency." This definition includes many guidance documents. Per the mandates of these Executive Orders, the Department through the Regulatory Reform Task Force is evaluating its regulations and guidance. That evaluation is ongoing.

The Department is committed to fulfilling the committee's request in a timely manner and will continue to update members of your staff regarding the Department's progress. While additional work remains, we have completed a comprehensive review of guidance material for Calendar Years 2017 and 2016 which are enclosed for review. Please note, the Veterans Employment and Training Service (VETS) was able to provide all of the information requested by the committee through 2008. The enclosed documents include the entirety of relevant material from VETS.

If you have any questions regarding the enclosed information please have your staff contact the Office of Congressional and Intergovernmental Affairs at (202)-693-4600.

Sincerely,

A handwritten signature in blue ink, appearing to read "Katherine B. McGuire", written in a cursive style.

Washington, D.C. 20210

The Honorable Trey Gowdy
Chairman
Committee on Oversight and Government Reform
U.S. House of Representatives
Washington, D.C. 20515

Dear Chairman Gowdy,

Thank you for your December 8, 2017, letter to Secretary of Labor R. Alexander Acosta requesting a list of all guidance documents issued by the Department of Labor (the Department) since January 1, 2008. Your letter was forwarded to the Office of Congressional and Intergovernmental Affairs for response.

As you know, the President's Executive Orders 13771 and 13777 focus on reducing regulatory burdens that eliminate jobs, or inhibit job creation; are outdated, unnecessary, or ineffective; impose costs that exceed benefits; create a serious inconsistency or otherwise interfere with regulatory reform initiatives and policies; are not publicly available or that are insufficiently transparent to meet the standard for reproducibility; or derive from or implement Executive Orders or other Presidential directives that have been subsequently rescinded or substantially modified.

Specifically, Sec. 3 of Executive Order 13777 provides that the Regulatory Reform Task Forces, "shall evaluate existing regulations (as defined in section 4 of Executive Order 13771) and make recommendations to the agency head regarding their repeal, replacement, or modification, consistent with applicable law." Sec. 4 of Executive Order 13771, with a few exceptions for categories such as national security, defines "regulation" or "rule" as, "an agency statement of general or particular applicability and future effect designed to implement, interpret, or prescribe law or policy or to describe the procedure or practice requirements of an agency." This definition includes many guidance documents. Per the mandates of these Executive Orders, the Department through its Regulatory Reform Task Force is evaluating its regulations and guidance. That evaluation is ongoing.

In accordance with the committee's request, guidance material issued by the Department for Calendar Years 2008 through 2015 is enclosed for review. Please note, the information previously provided by the Department for Calendar Years 2016 and 2017 can be found on the second tab.

If you have any questions regarding the enclosed information please have your staff contact the Office of Congressional and Intergovernmental Affairs at (202)-693-4600.

Sincerely,

A handwritten signature in blue ink, appearing to read "Katherine B. McGuire", is written over the printed name.

OSHA	The Use of Metrics in Process Safety Management (PSM) Facilities	Fact Sheet	metrics are measures that are used to evaluate and track the performance of a facility's process safety management program. For facilities that handle highly hazardous chemicals, metrics can be used to quantify how a process has performed historically, how it might perform in the future, and where improvements can be made to keep workers safe. This document provides employers with examples of metrics that are tracked by	10/03/16	Directorate of Standards and Guidance, Office of Engineering Safety	NO	NO	N/A	N/A	NO	N/A	N/A	N/A	N/A	https://www.osha.gov/Publications/OSHA3896.pdf	N/A	Publication 3896
